****A Forbes Best Business Book of the Year, 2015**** ****Winner of the 2015 800-CEO-READ Business Book Award in Entrepreneurship**** When columnist Paul Downs was approached by The New York Times to write for their "You're the Boss" blog, he had been running his custom furniture business for twenty-four years strong. or mostly strong. Now, in his first book, Downs paints an honest portrait of a real business, with a real boss, a real set of employees, and the real challenges they face. Fresh out of college in 1986, Downs opened his first business, a small company that builds custom furniture. In 1987, he hired his first employee. That's when things got complicated. As his enterprise began to grow, he had to learn about management, cash flow, taxes, and so much more. But despite any obstacles, Downs always remained keenly aware that every small business, no matter the product it makes or the service it provides, starts with people. He writes with tremendous insight about hiring

employees, providing motivation to get the best out of them, and the difficult decisions he's made to let some of them go. Downs also looks outward, to his dealings with vendors and to providing each client with exemplary customer service from first sales pitch to final delivery. With honesty and conviction, he tells the true story behind building and sustaining a successful company in an ever-evolving economy, often airing his own failures and shortcomings to reveal the difficulties that arise from being a boss and a businessperson. Countless employees have told the story of their experience with managers—Boss Life tells the other side of that story.

Pediatric retinal diseases are not simply retinal diseases that occur in children; rather, they are unique disorders that often are not found in adults. This textbook of the pediatric retina offers in-depth guidance on congenital and acquired diseases of the retina in the pediatric population. It is organized according to disease onset and timing, as well as anatomy. All chapters are written by leading authorities in the field from both the pediatric and the retinal perspective. A multidisciplinary approach to the topic is adopted, and critical information is included on disease classification and diagnosis, pathophysiology, genetics, complications, and prognosis. Pediatric Retina will be a useful source of information for pediatric ophthalmologists, retina specialists, and other eye care providers who care for children.

In this engaging account, the first president of Brandeis tells how many formidable obstacles to launching a new university without

initial capital endowment or any hope of alumni support for at least a generation were overcome; how academic goals were drafted, distinguished faculty recruited, and chairs endowed; and how a dilapidated campus was expended into a well-organized plant of some 90 buildings. In this revision of the 1976 edition, Abram L. Sachar expands the scope of his commentary and imbues it with a critical depth and objectivity that comes from 20 additional years of active involvement in the service of the university.

The Englishman from Lebedian Addison-Wesley Professional
Written clearly and passionately by award-winning theatre director Anne Bogart this book contains eight new essays on art, theatre and the collaborative creative process, where Bogart argues that art is more necessary and powerful than ever.

1. The first edition of this book was published in 1977. The text has been well received and is still used, although it has been out of print for some time. In the intervening three decades, a lot of interesting things have happened to mathematical logic: (i) Model theory has shown that insights acquired in the study of formal languages could be used fruitfully in solving old problems of conventional mathematics. (ii) Mathematics has been and is moving with growing acceleration from the set-theoretic language of structures to the language and intuition of (higher) categories, leaving behind old concerns about infinities: a new view of foundations is now emerging. (iii) Computer science, a non-nonsense child of the abstract computability theory, has been creatively dealing with old challenges and providing new ones, such as the P/NP problem. Planning additional chapters for this

second edition, I have decided to focus on model theory, the conspicuous absence of which in the first edition was noted in several reviews, and the theory of computation, including its categorical and quantum aspects. The whole Part IV: Model Theory, is new. I am very grateful to Boris I. Zilber, who kindly agreed to write it. It may be read directly after Chapter II. The contents of the first edition are basically reproduced here as Chapters I–VIII. Section IV.7, on the cardinality of the continuum, is completed by Section IV.7.3, discussing H. Woodin’s discovery.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations

to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Master the fundamentals, hone your business instincts, and save a fortune in tuition. The consensus is clear: MBA programs are a waste of time and money. Even the elite schools offer outdated assembly-line educations about profit-and-loss statements and PowerPoint presentations. After two years poring over sanitized case studies, students are shuffled off into middle management to find out how business really works. Josh Kaufman has made a business out of distilling the core principles of business and delivering them quickly and concisely to people at all stages of

their careers. His blog has introduced hundreds of thousands of readers to the best business books and most powerful business concepts of all time. In *The Personal MBA*, he shares the essentials of sales, marketing, negotiation, strategy, and much more. True leaders aren't made by business schools—they make themselves, seeking out the knowledge, skills, and experiences they need to succeed. Read this book and in one week you will learn the principles it takes most people a lifetime to master.

Acknowledging the fact that hypospadiology has become a true subspecialty, this unique book highlights and explores current philosophy and different principles and techniques of hypospadias repair. It offers an excellent practical guide to all surgeons involved in the management of this common, but troublesome disease. The aim is to help interested surgeons to develop vision, philosophy and talent rather than just enumerate techniques. It is well illustrated with ample colour diagrams and photographs of various operations together with many technical tips. All surgeons in training will benefit by reading this book in preparing for their higher examinations and their surgical training. There is a wide diversity of opinions, and a large number of operations have been described. Here, the team of world class authors present an expert overview on the management of this condition.

Cyber Security Policy Guidebook Penguin

"Marytanov explains why and how the US armed forces have lost the military supremacy they thought they once had and how Russia, which supposedly had been defeated in the Cold War, succeeded not only in catching up with USA, but actually

surpassing it in many key domains such as long range cruise missiles, diesel-electric submarines, air defenses, electronic warfare, air superiority and many others. Andrei Martyanov's book is an absolute 'must read' for any person wanting to understand the reality of modern warfare and super-power competition." *THE SAKER* While exceptionalism is not unique to America, the intensity of their conviction and its global ramifications are. This view of its exceptionalism has led the US to grossly misinterpret—sometimes deliberately—the causative factors of key events of the past two centuries. Accordingly, the wrong conclusions have been derived, and very wrong lessons learned. Nowhere has this been more manifest than in American military thought and its actual application of military power. Time after time the American military has failed to match lofty declarations about its superiority, producing instead a mediocre record of military accomplishments. Starting from the Korean War the United States hasn't won a single war against a technologically inferior, but mentally tough enemy. The technological dimension of American "strategy" has completely overshadowed any concern with the social, cultural, operational and even tactical requirements of military (and political) conflict. With a new Cold War with Russia emerging, the United States enters a new period of geopolitical turbulence completely unprepared in any meaningful way—intellectually, economically, militarily or culturally—to face a reality which was hidden for the last 70+ years behind the curtain of never-ending Chalabi moments and a strategic delusion concerning Russia, whose history the US viewed through a Solzhenitsified caricature kept alive by a powerful neocon lobby, which even today dominates

US policy makers' minds. Martyanov's former Soviet military background enables deep insight into the fundamental issues of warfare and military power as a function of national power—assessed correctly, not through the lens of Wall Street "economic" indices and a FIRE economy, but through the numbers of enclosed technological cycles and culture, much of which has been shaped in Russia by continental warfare and which is practically absent in the US.

your brain to think more creatively and positively in the face of

setbacks. In the words of Cheryl Strayed, it's "a must-read for

anyone who wants to face their fears, fulfill their dreams, and find

a better way forward." If you're having trouble solving a problem

or reaching a dream, the problem isn't you. It's that you haven't

yet installed the one belief that changes everything. Marie's mom

once told her, "Nothing in life is that complicated. You can do

whatever you set your mind to if you roll up your sleeves.

Everything is figureoutable." Whether you want to leave a dead

end job, break an addiction, learn to dance, heal a relationship, or

grow a business, *Everything is Figureoutable* will show you how.

In this revised and updated edition, you'll learn: The habit that

makes it 42% more likely you'll achieve your goals. How to

overcome a lack of time and money. How to deal with criticism

and imposter syndrome. It's more than just a fun phrase to say. It's a philosophy of relentless optimism. A mindset. A mantra. A conviction. Most important, it's about to make you unstoppable.

'Blown to Bits' is about how the digital explosion is changing everything. The text explains the technology, why it creates so many surprises and why things often don't work the way we expect them to. It is also about things the information explosion is destroying: old assumptions about who is really in control of our lives.

NEW YORK TIMES BESTSELLER • The bold futurist and renowned author of *The Singularity Is Near* explores the limitless potential of reverse-engineering the human brain. "This book is a Rosetta Stone for the mystery of human thought."—Martine Rothblatt, chairman and CEO, United Therapeutics, and creator of Sirius XM Satellite Radio "Kurzweil's vision of our super-enhanced future is completely sane and calmly reasoned, and his book should nicely smooth the path for the earth's robot overlords, who, it turns out, will be us."—The New York Times In *How to Create a Mind*, Ray Kurzweil presents a provocative exploration of the most important project in human-machine civilization: reverse-engineering the brain to understand precisely how it works and using that knowledge to create even more intelligent machines. Kurzweil discusses how the brain functions, how the mind emerges, brain-computer interfaces, and the implications of vastly increasing the powers of our intelligence to address the world's problems. He also thoughtfully examines emotional and moral intelligence and the origins of consciousness and envisions

the radical possibilities of our merging with the intelligent technology we are creating. Drawing on years of advanced research and cutting-edge inventions in artificial intelligence, *How to Create a Mind* is an incredible synthesis of neuroscience and technology and provides a road map for the future of human progress.

"There is no one quite like Barbara Kingsolver in contemporary literature," raves the Washington Post Book World, and it is right. She has been nominated three times for the ABBY award, and her critically acclaimed writings consistently enjoy spectacular commercial success as they entertain and touch her legions of loyal fans. In *High Tide* in Tucson, she returns to her familiar themes of family, community, the common good and the natural world. The title essay considers Buster, a hermit crab that accidentally stows away on Kingsolver's return trip from the Bahamas to her desert home, and turns out to have manic-depressive tendencies. Buster is running around for all he's worth -- one can only presume it's high tide in Tucson. Kingsolver brings a moral vision and refreshing sense of humor to subjects ranging from modern motherhood to the history of private property to the suspended citizenship of human beings in the Animal Kingdom. Beautifully packaged, with original illustrations by well-known illustrator Paul Mirocha, these wise lessons on the urgent business of being alive make it a perfect gift for Kingsolver's many fans.

An illuminating look at the surprising upside of ambiguity—and how, properly harnessed, it can inspire learning, creativity, even empathy. Life today feels more overwhelming and chaotic than ever. Whether it's a confounding work problem or a faltering relationship or an unclear medical diagnosis, we face constant uncertainty. And we're continually bombarded with information, much of it contradictory. Managing ambiguity—in our jobs, our relationships, and daily lives—is quickly becoming an essential

skill. Yet most of us don't know where to begin. As Jamie Holmes shows in *Nonsense*, being confused is unpleasant, so we tend to shutter our minds as we grasp for meaning and stability, especially in stressful circumstances. We're hard-wired to resolve contradictions quickly and extinguish anomalies. This can be useful, of course. When a tiger is chasing you, you can't be indecisive. But as *Nonsense* reveals, our need for closure has its own dangers. It makes us stick to our first answer, which is not always the best, and it makes us search for meaning in the wrong places. When we latch onto fast and easy truths, we lose a vital opportunity to learn something new, solve a hard problem, or see the world from another perspective. In other words, confusion—that uncomfortable mental place—has a hidden upside. We just need to know how to use it. This lively and original book points the way. Over the last few years, new insights from social psychology and cognitive science have deepened our understanding of the role of ambiguity in our lives and Holmes brings this research together for the first time, showing how we can use uncertainty to our advantage. Filled with illuminating stories—from spy games and doomsday cults to Absolut Vodka's ad campaign and the creation of Mad Libs—*Nonsense* promises to transform the way we conduct business, educate our children, and make decisions. In an increasingly unpredictable, complex world, it turns out that what matters most isn't IQ, willpower, or confidence in what we know. It's how we deal with what we don't understand.

In the early 1980s, Springfield Remanufacturing Corporation (SRC) in Springfield, Missouri, was a near bankrupt division of International Harvester. Today it's one of the most successful and competitive companies in the United States, with a share price

3000 times what it was thirty years ago. This miracle turnaround is all down to one man, Jack Stack, and his revolutionary system of Open-Book Management, in which every employee understands the company's key figures, can act on them and has a real stake in the business. In Stack's own words: 'When employees think, act and feel like owners ... everybody wins.' As a management strategy, 'the great game of business' is so simple and effective that it's been taken up by companies from Intel to Harley Davidson.
