The work expatiated on the concept of financial performance and its analysis. It also captured relevant stakeholders for financial performance information. The review sought to encapsulate the existing state of knowledge on financial performance evaluations from previously published works. It also highlighted gaps in the reviewed literatures. Two dimensions of existing literature were explored; namely financial performance of companies, regardless of the location or industry, as well as those specific to companies in Ghana and particularly to the telecommunications sector. Of all the existing works reviewed, 54 percent captured literature in the first category described above and the remaining 46 percent was on the second

category. It was revealed after the review, that three different methodologies or approaches were adopted in evaluating financial performance of firms. The first approach employed the use of financial ratios either overtime within firm, or between different firms for comparative analysis. Another strand of the surveyed works examined the impacts of selected indicators like capital structure and operational practices like Just-In-Time (JIT) systems on financial performance. A third approach employed metrics from internal key performance indicators to examine a firm's financial performance. It was ascertained that majority of existing literatures in the field and on the topic deployed the first two approaches.

Much can be learnt about a firm from a careful examination of its financial statements. Financial statements provide a summarized view of the financial position and operations of a firm. These can be useful indicators or measures to appraise the financial health of an organization and its profitability, financial stability (long term and short term), financial management and overall efficiency of the business. Interest of various related

groups such as managers, shareholders, creditors, and tax authorities is affected by the financial performance of a firm. Thus, the analysis of financial performance is of great importance to these parties. This study provides a summary of analysis of financial performance for five financial years of IIL, extending from 1999-2000 to 2003-2004 for its various investors and stakeholders to take their investment decisions.

The choice of financial performance measures is one of the most critical challenges facing organizations. The accounting-based measures of financial performance have been viewed as inadequate, as firms began focusing on shareholder value as the primary long-term objective of the organization. Hence, value-based metrics were devised that explicitly incorporate the cost of capital into performance calculations. Despite the increasing emphasis on these value-based measures, no definitive evidence exists of which metric works better than others, and on the extent to which any of them is superior to traditional accounting measures. In this scenario, the objective of this book is contributing to the ongoing dialogue on the appropriateness of different financial performance measures, by providing a systematic and updated review of the major value-based measures, by highlighting their respective strengths and weaknesses and by comparing the main international empirical evidence on their effectiveness. This book can be a powerful tool for guiding managers and graduate students in the "tangled forest" of the existing metrics, by providing them with the quick, but adequate knowledge for consistently adopting them.

[Evaluating Corporate Financial Performance](#) McGraw-Hill/Irwin

"Jacek's book offers a user-friendly step-by-step guide through a corporate financial statement analysis. It is a journey starting from fundamental concepts of financial reporting, and then traveling through numerous analytical tools, which are discussed with both a retrospective as well as future-oriented focus. The real-life examples greatly demonstrate not only how financial reports are useful in evaluating business performance, but also (or before all) in an assessment of corporate business risks. The auxiliary materials are innovative and highly valuable too, since they make a 'digestion' of the discussed topics much easier, especially for non-advanced readers." -Artur Osuchowski, former consultant at KPMG and E&Y, former Deputy President of Ciech S.A. and ongoing member of several supervisory boards of companies listed on Warsaw Stock Exchange "I strongly recommend this textbook to any student or practitioner who intends to develop his or her skills in interpreting accounting numbers reported on corporate financial reports. All analytical concepts, discussed in this book, are demonstrated with the use of real-life case studies based on data extracted from financial

statements of multiple corporations. For example, in chapter five, several analytical tools are presented to evaluate a company with a high bankruptcy risk. The analysis in all chapters ensures a 'down-to-earth' focus, as well as a purely practical orientation of Jacek's work." -Ahmad H. Jumah, Associate Professor of Accounting, University of Illinois Springfield "Jacek's book goes beyond simply helping readers understand what financial statements contain. His book innovatively helps readers use those statements to gather true insight into a company's performance and operations. Through one timely example after another, readers come away with a far deeper sense of the power of effective and transparent financial reporting." -Eugene Soltes, McLean Family Professor of Business Administration, Harvard Business School "This book is extraordinary because of innovative features such as online appendix, Excel files, and webinar-form lectures. It includes interesting real-life cases which will attract readers' attention. This book is quite different from existing accounting books and will be an outstanding tool for financial statement analysis." -Ingoo Han, Professor of Accounting, Korea Advanced Institute of Science and Technology "This is a wonderful book, the additional materials create a kind of augmented reality for learning finance, and its practical approach makes it an essential reference for finance courses based on the case method or challenge-based learning." -Felipe A. Pérez Sosa, EGADE Business School, Tecnológico de Monterrey "Jacek's writing on accounting is sharp and illuminating. His latest is no exception and a must read for those trying to understand the art of financial reporting." -Jamie Powell, FT Alphaville Jacek Welc is an Assistant Professor at Wroclaw University of Economics, Poland and a Professor of Corporate Finance at SRH Berlin University of Applied Sciences, Germany. Financial Statement Analysis John Wiley & Sons

Despite a plethora of techniques to analyse the financial performance of a business, there has been no single methodology that has been overwhelmingly preferred by users. This could be an indication that either the methods themselves are deficient or they are limited by other factors that are not easily overcome. Unlike the current offerings in the field, which focus on issues relating to business performance management or non-financial aspects (such as market efficiency, satisfaction and workforce productivity), this book offers a solution to a major gap in the literature and understanding for those seeking to measure, analyse and benchmark the financial performance of any organisation (for-profit, not-for-profit and government agencies). It clearly identifies why current techniques fail; proposes and evidences a solution that overcomes these issues by including two algorithms that can be combined, to solve this problem; and demonstrates the practical application of the technique to the benefit of users in order to pinpoint real performance levels and insights. One of the largest issues this book will help to overcome is the inability to compare the accounts of businesses/organisations from different countries that report in different currencies. This technique eliminates the need for currency translations and the issues that arise with that process. This book is an invaluable and practical guide to assist accounting and finance practitioners in measuring and comparing financial performance across firms with different business models, different accounting policies and different scales of operations.
