Trauma is a disease of epidemic proportions that preys on the young, killing more Americans up to age thirty-seven than all other afflictions combined. Every year an estimated 2.8 million people are hospitalized for injuries and more than 180,000 people die. We take for granted that no matter how or where we are injured, someone will call 911 and trained first responders will show up to insert IVs, stop the bleeding, and swiftly deliver us to a hospital staffed by doctors and nurses with the expertise necessary to save our lives. None of this happened on its own. Told through the eyes of a surgeon who has flown on rescue helicopters, resuscitated patients in trauma centers in Houston and Chicago, and operated on hundreds of trauma victims of all ages, Hurt takes us on a tour of the advancements in injury treatment from the battlefields of the Civil War to the state-of-the-art trauma centers of today.

### **Advanced Paediatric Life Support** Lippincott Williams & Wilkins

"Vascular emergencies are common in the practice of emergency medicine, and emergency care providers will no doubt encounter these entities on a day-to-day basis in the emergency department. Of all of the clinical entities in the house of medicine, vascular emergencies typically are the most time sensitive, and the patients with these conditions tend to be the sickest. Vascular emergencies by their very nature are limb and life threatening, and emergency physicians and other acute care providers should be expert in the care and disposition of this group of patients in order to ensure an optimal outcome. This book, developed by emergency physicians, vascular surgeons, and trauma surgeons who know what it is like to see patients day in and day out, will focus on the acute presentation of vascular emergencies in the emergency department. The overall aim of the book is to provide practical, useful information that will allow for the delivery of excellent medical care"-- Provided by publisher.

Intensive care medicine is a dynamic and evolving specialty, requiring its practitioners to be part physician, physiologist and anaesthetist. This requires a firm foundation of knowledge and an ability to apply this to the clinical situation. This book contains 270 multiple-choice questions allowing self-assessment of the breadth of knowledge required of the modern intensivist. The book is divided into three papers each consisting of 60 multiple true false (MTF) and 30 single best answer (SBA) questions covering areas including resuscitation, diagnosis, disease management, organ support, and ethical and legal aspects of practice. The MTF questions test factual knowledge and understanding of the evidence base underpinning intensive care medicine, while the SBA questions test the ability of the candidate to prioritise, compete options and make the best decision for the patient. Each question is peer reviewed and accompanied by concise and detailed explanatory notes with references to guide further reading. All the authors are practising intensive care physicians with firsthand experience of professional examinations in the specialty. This book will appeal to intensive care physicians approaching professional examinations worldwide, including the European Diploma, American Board and Faculty of Intensive Care Medicine examinations. In addition, it will appeal to intensive care nurses and allied healthcare professionals wishing to update their knowledge as part of continuing professional development, and to physicians sitting professional examinations in related specialties requiring knowledge of intensive care medicine such as general medicine,

general surgery and anaesthesia. This new book will complement the existing international best-selling title 'Multiple Choice Questions in Intensive Care Medicine' (ISBN 978 1 903378 64 9), also written by Dr Steve Benington.
