The writings of William James represent one of America's most

original contributions to the history of ideas. Ranging from philosophy and psychology to religion and politics, James composed the most engaging formulation of American pragmatism. 'Pragmatism' grew out of a set of lectures and the full text is included here along with 'The Meaning of Truth', 'Psychology', 'The Will to Believe', and 'Talks to Teachers on Psychology'.

The fifth and final book in the Blue Door series, which starts with *The Swish of the Curtain*, the classic story which inspired actors from Maggie Smith to Eileen Atkins. Maddy got up and did her Junior Miss speech, trying not to overdo the comedy. Her American accent was hideous, and very funny, and all the class began to giggle. The whole class clapped when she had finished, and Mr Manyweather roared with laughter. 'What a little horror!' he cried. 'I've never seen anything so nauseating, but excellent!' Maddy is on her own again at the Actors' Guild in London, while the others work at the Blue Door Theatre. But she's not entirely alone: she has a new roommate, a new chaperone and an inspiring new teacher, Mr Manyweather, brought in to introduce students to the very different world of television. With these friends, can Maddy survive her first taste of failure - or is she embarking on her greatest acting adventure yet?

Growing up in the late 19th century, Laura Wheeler Waring didn't see any artists who looked like her. She didn't see any paintings of people who looked like her, either. As a young woman studying art in Paris, she found inspiration in the works of Matisse and

Gaugin to paint the people she knew best. Back in Philadelphia, the Harmon Foundation commissioned her to paint portraits of accomplished African-Americans. Her portraits still hang in Washington DC's National Portrait Gallery, where children of all races can admire the beautiful shades of brown she captured.

John R. Searle has made profoundly influential contributions to three areas of philosophy: philosophy of mind, philosophy of language, and philosophy of society. This volume gathers together in accessible form a selection of his essays in these areas. They range widely across social ontology, where Searle presents concise and informative statements of positions developed in more detail elsewhere; artificial intelligence and cognitive science, where Searle assesses the current state of the debate and develops his most recent thoughts; and philosophy of language, where Searle connects ideas from various strands of his work in order to develop original answers to fundamental questions. There are also explorations of the limitations of phenomenological inquiry, the mind-body problem, and the nature and future of philosophy. This rich collection from one of America's leading contemporary philosophers will be valuable for all who are interested in these central philosophical questions.

This profound exploration of one of the core notions of philosophy—the concept of existence itself—reviews, then counters (via Meinongian theory), the mainstream philosophical view running from Hume to Frege, Russell, and Quine, summarized thus by Kant: “Existence is not a predicate.” The initial section of the book presents a comprehensive introduction to, and critical evaluation of, this mainstream view. The author moves on to provide the first systematic survey of all the main Meinongian theories of existence, which, by contrast, reckon

existence to be a real, full-fledged property of objects that some things possess, and others lack. As an influential addition to the research literature, the third part develops the most up-to-date neo-Meinongian theory called Modal Meinongianism, applies it to specific fields such as the ontology of fictional objects, and discusses its open problems, laying the groundwork for further research. In accordance with the latest trends in analytic ontology, the author prioritizes a meta-ontological viewpoint, adopting a dual definition of meta-ontology as the discourse on the meaning of being, and as the discourse on the tools and methods of ontological enquiry. This allows a balanced assessment of philosophical views on a cost-benefit basis, following multiple criteria for theory evaluation. Compelling and revealing, this new publication is a vital addition to contemporary philosophical ontology.

The Swish of the Curtain Penguin

We need only scan the latest news headlines to see how bias and prejudice harm adults and children alike—every single day. Police shootings that give rise to the Black Lives Matter revolution . . . rampant sexual harassment of women and the subsequent #MeToo movement . . . extreme violence toward trans men and women. It would be easy to fix these problems if the examples stopped with a few racist or sexist individuals, but there are also biases embedded in our government policies, media, and institutions. As a developmental psychologist and international expert on stereotypes and discrimination in children, Dr. Christia Spears Brown knows that biases and prejudice don't just develop as people become adults (or CEOs or politicians). They begin

when children are young, slowly growing and exposed to prejudice in their classrooms, after-school activities, and, yes, even in their homes, no matter how enlightened their parents may consider themselves to be. The only way to have a more just and equitable world—not to mention more broad-minded, empathetic children—is for parents to closely examine biases beginning in childhood and how they infiltrate our kids' lives. In her new book *Unraveling Bias: How Prejudice Has Shaped Children for Generations and Why It's Time to Break the Cycle*, Dr. Brown will uncover what scientists have learned about how children are impacted by biases, and how we adults can help protect them from those biases. Part science, part history, part current events, and part call to arms, *Unraveling Bias* provides readers with the answers to vital questions: • How do biased policies, schools, and media harm our children? • Where does childhood prejudice come from, and how do these prejudices shape children's behavior, goals, relationships, and beliefs about themselves? • What can we learn from modern-day science to help us protect our children from these biases? Few issues today are as critical as being aware of bias and prejudice all around us and making sure our kids don't succumb to them. To change lives and advance society, it's time to unravel our biases—starting

Ludwig Wittgenstein (1889-1951) was an extraordinarily original philosopher, whose influence on twentieth-century thinking goes well beyond philosophy itself. In this book, which aims to make Wittgenstein's thought accessible to the general non-specialist reader, A. C. Grayling explains the nature and impact of Wittgenstein's views. He describes both his early and later philosophy, the differences and connections between them, and gives a fresh assessment of Wittgenstein's continuing influence on contemporary thought.
