RADAR - Advanced Communication Systems Part 2
NASA Built Two Versions of the Apollo Command Module
Newton's Law of Universal Gravitation by Professor Mac

The Space Communications and Navigation (SCaN) program places the three prime NASA space communications networks, Space Network (SN), Near Earth Network (NEN) (previously known as the Ground Network or GN), and the Deep Space Network (DSN), under one Management and Systems Engineering umbrella. It was established in 2006.

Advanced Communication Systems Nasa

NASA's communication and navigation capability is based on the premise that communications shall enable and not constrain missions. Advancement in communication and navigation technology will allow future missions to implement new and more capable science instruments, greatly enhance human missions beyond Earth orbit, and enable entirely new mission concepts.

Advanced Communication Systems Nasa - reliefwatch.com

The testbed also provided valuable insights that NASA's Cognitive Communications Project will use to increase a respective mission's capabilities and a communications system's resiliency by merging SDR technology with machine learning, networking and automation.

Space Communications and Navigation Program - Wikipedia

On September 12, 1993, a new and soon-to-be award-winning on-ramp to the information superhighway was opened to heavy traffic: NASA launched one of the most revolutionary breakthroughs in space communications history, the Advanced Communications Technology Satellite (ACTS). ACTS is the first high-speed, all-digital communications satellite.

NASA - Switchboard in the Sky

At the core of the SCaN Testbed are three unique software defined radios (SDRs) provided by government and industry partners. All of the radios are compliant with the NASA Space

Telecommunications Radio System (STRS) Architecture Standard. The SCaN Testbed also includes an Avionics Subsystem, RF switching, and a variety of antennas, two of which are on a gimbal.
