The Digital Doctor: Hope, Hype, and Harm at the Dawn of Medicine's Computer Age W. W. Norton & Company

The mechanization of medicine has submerged, its humanism. The physician no longer ministers to a distinctive person but concern himself with a particular malfunctioning organ. The distressed patient is frequently forgotten or relegated to the background. A thought process is essential for discussing and understanding a symptom. This book, for the first time brings the doctor to the bedside of the patient for history, clinical examination, investigation, and finally the diagnosis. This book discusses the art of medicine in a simple dialogue style- between the patient and the doctor- and shows through bedside teaching, the treatment of an illness or a disease, rather than the patient. This illustrated volume containing twenty case studies sensitizes the reader to look a patient holistically, not just the body, but mind and emotions too. This unique volume teaches medicinal science as an art of healing, where modern medicine is not just restricted to science and technology.

This is an open access book. The book provides an overview of the state of research in developing countries - Africa, Latin

America, and Asia (especially India) and why research and publications are important in these regions. It addresses budding but struggling academics in low and middle-income countries. It is written mainly by senior colleagues who have experienced and recognized the challenges with design, documentation, and publication of health research in the developing world. The book includes short chapters providing insight into planning research at the undergraduate or postgraduate level, issues related to research ethics, and conduct of clinical trials. It also serves as a guide towards establishing a research question and research methodology. It covers important concepts such as writing a paper, the submission process, dealing with rejection and revisions, and covers additional topics such as planning lectures and presentations. The book will be useful for graduates, postgraduates, teachers as well as physicians and practitioners all over the developing world who are interested in academic medicine and wish to do medical research.

Named one of the Best Books of the Year by Kirkus Reviews and BookPage "Illuminates human fragility in tales both lyrical and soul-wrenching." —Danielle Ofri, New York Times Book Review In this "artful, unfailingly human, and understandable" (Boston Globe) account inspired by his own experiences becoming a doctor, Terrence Holt puts readers on the front lines of the harrowing crucible of a medical residency. A medical classic in the making, hailed by critics as capturing "the feelings of a young doctor's three-year hospital residency . . . better than anything else I have ever read" (Susan Okie, Washington Post), Holt brings a writer's touch and a doctor's eye to nine unforgettable stories where the intricacies of modern medicine confront the mysteries of the human spirit. Internal Medicine captures the "stark moments of success and failure, pride and shame, courage and cowardice, self-reflection and obtuse blindness that mark the years of clinical training" (Jerome Groopman, New York Review of Books), portraying not only a doctor's struggle with sickness and suffering but also the fears and frailties each of us—doctor and patient—bring to the bedside.

Geriatric Rehabilitation addresses the fact that this is an age in which individuals have increasing longevity, better health care, education and expectations of health care which present new, increasing and even radical challenges to health care providers. The care of our older patients in rehabilitation settings demands the broad understanding of the key differences in strategies to care for older adults. The combined skills embraced in rehabilitation and geriatrics are presenting unprecedented opportunities for both fields to make substantive and even ground-breaking improvements in the lives of millions of older adults who entrust their lives to us. Rarely in one's medical career are such opportunities so evident and achievable. Geriatric Rehabilitation edited by Dr. K. Rao Poduri, MD. FAAPMR draws on a distinguished group of authors who are the front-line providers of care to the older adults. This book presents the full spectrum of

the unique care needs of older patients who need the combined skills of physical medicine and geriatrics. It provides an easily accessible means of acquiring and improving these new skills for all those involved in geriatric care.
