Put simply, there is no text about public librarianship more rigorous or comprehensive than McCook's survey. Now, the REFORMA Lifetime Achievement Award-winning author has teamed up with noted public library scholar and advocate Bossaller to update and expand her work to incorporate the field's renewed emphasis on outcomes and transformation. This "essential tool" (Library Journal) remains the definitive handbook

on this branch of the profession. It covers every aspect of the public library, from its earliest history through its current incarnation on the cutting edge of the information environment, including statistics, standards, planning, evaluations, and results; legal issues, funding, and politics; organization, administration, and staffing; all aspects of library technology, from structure and infrastructure to websites and makerspaces; adult services, youth services, and children's services; associations, state library agencies, and other professional organizations; global perspectives on public libraries; and advocacy, outreach, and human rights. Exhaustively researched and expansive in its scope, this benchmark text continues to serve both LIS students and working professionals.

The idea of "The Green Book" is to give the Motorist and Tourist a Guide not only of the Hotels and Tourist Homes in all of the large cities, but other classifications that will be found useful wherever he may be. Also facts and information that the Negro Motorist can use and depend upon. There are thousands of places that the

public doesn't know about and aren't listed. Perhaps you know of some? If so send in their names and addresses and the kind of business, so that we might pass it along to the rest of your fellow Motorists. You will find it handy on your travels, whether at home or in some other state, and is up to date. Each year we are compiling new lists as some of these places move, or go out of business and new business places are started giving added employment to members of our race.

The Best Transportation System in the World focuses on the

centrality of government in organizing the nation's transportation industries. As the authors show, over the course of the twentieth century, transportation in the United States was as much a product of hard-fought politics, lobbying, and litigation as it was a naturally evolving system of engineering and available technology. For example, in the mid-1950s, President Eisenhower, concerned about a railroad industry in decline, asked Congress to grant railroad executives authority to modify prices and service even as he introduced the legislation that provided for the national highway system. And as early as the 1960s, presidents across the political spectrum, including Johnson, Nixon, Ford, and Carter, sought broad deregulation of the transportation industry in order to prime the economic pump or, in the 1970s, reverse stagflation. At every turn, the authors contend, political considerations served to shape the businesses and infrastructure that Americans use to travel.

To do so requires the knowledge and practice of library missions and roles in different types of libraries and the delivery of that information to an increasingly diverse clientele.
