Essentials of Investments McGraw-Hill/Irwin
Investments sets the standard as a graduate (MBA) text intended primarily for courses in investment analysis. The guiding principle has been to present the material in a framework that is organized by a central core of consistent fundamental principles and will introduce students to major issues currently of concern to all investors. In an effort to link theory to practice, the authors make their approach consistent with that of the CFA Institute. Many features of this text make it consistent with and relevant to the CFA curriculum. The common unifying theme is that security markets are nearly efficient, meaning that most securities are priced appropriately given their risk and return attributes.

Investments is also organized around several important themes: The central theme is the near-informational-efficiency of well-developed security markets and the general awareness that competitive markets do not offer "free lunches" to participants. A second theme is the risk-return trade-off. Also, this text places great emphasis on asset allocation. Finally, this text offers a broad and deep treatment of futures, options, and other derivative security markets.

This text incorporates Corporate Finance, investments, and institutions. Acclaimed authors Bodie and Merton offer an approach balanced among the three pillars of finance—optimization over time, asset valuation, and risk management. The book encompasses all subfields of finance within a single unifying conceptual framework, and offers the big picture of resource allocation over time under conditions of uncertainty.
