**Mechanix Illustrated**

The first in the Media-Life-Universe trilogy,  
this volume explores a transdisciplinary  
notion of media and technology, exploring  
media as technology, with special  
attention to its material, historical and  
ecological ramifications. The authors  
reconceptualize media from  
environmental, ecological and systems  
approaches, drawing not only on media  
and communication studies, but also  
philosophy, sociology, political science,  
biology, art, computer science, information  
studies and other disciplines. Featuring a  
group of internationally known scholars,  
this collection explores evolving definitions  
of media and how media technologies are  
transforming theory and practice. As the

current media includes a wider and wider  
range of concepts, products, services and  
institutions, the definition of media  
continues to be in a state of flux. What are  
media today? How is media studies  
evolving? How have technologies  
transformed communication and media  
theory, and informed praxis? What are  
some of the futures of media? The  
collection challenges traditional notions of  
media, as well as concepts such as  
freedom of expression, audience  
empowerment and participatory media,  
and explores emergent media including  
transmedia, virtual reality, online games,  
metatechnology, remediation and  
makerspaces. The book's primary  
readership will be academics, scholars and  
students in media and communication  
studies, including a wide range of  
undergraduate and graduate courses in  
media studies, communication studies and  
new media. Suitable for classroom use in  
the areas of philosophy of communication  
and media, media theory, media ecology,  
cultural studies, media archaeology,  
feminist studies and political economy of  
communications and media.
