 It's safe to say that most of us have 'Skyped' with family, friends, or colleagues at

some point, and that 'Skype' has been normalized as a verb goes to show just how synonymous the tool is with video calling. Skype is a program that has become part of our lives and most people do not think about the history of it. Skype has been around since 2003 when the first public beta version was released. Since then, it has only grown in popularity and features. Skype was founded by

Janus Friis and Niklas Zennstrom in 2003. The software powering Skype was created by Priit Kasesalu, Ahti Heinla and Jaan Tallinn. The name for the program came from Sky Peer to Peer. Skype is a program that was born from the peer to peer networking idea that powered Kazaa which was a popular file sharing system. The idea for Skype was that the more people who were using the

system, the more reliable the connection was going to be. This peer to peer networking basis also influenced the free nature of the software. The release of version 2.0 Beta launched Skype to new levels of popularity. This popularity brought other attention including that of eBay who went on to purchase Skype for \$2.5 billion. The founders of Skype began to focus on a streaming service known

as Joost which would not become very popular. While owned by eBay, Skype continued to advance. However, eBay became frustrated with their purchase as they felt they had overvalued the product. This caused a change in the direction of Skype with a greater emphasis placed on sociability. This led to the instruction of Skypecasts in 2006.
