Sillman's works can be categorized as abstract painting, although her abstractions repeatedly allow forms and figures to be recognized. The title of the exhibition 'the ALL-OVER' refers to a concept often used to describe abstract painting. At its most literal, it refers to the practice of completely covering the canvas, a format that resists a traditional figure/ground hierarchy. The classic example of the style is embodied by the work of the American artist Jackson Pollock, though as the influential critic Clement Greenberg pointed out, the style in fact originated with the Ukrainian-American artist Janet Sobel. Sillman adapts this 'all-over' idea, using it as the title for her exhibition, which does not feature drip paintings as such, but which updates the idea of total coverage of the canvas through mechanical means (via inkjet printing) used in combination with the gestural. Panorama, consisting of twenty-four canvases, was developed for Portikus and is here seen in its entirety for the first time. Exhibition: Portikus, Frankfurt am Main, Germany (02.07. - 11.09.2016).

We all fear selling out. Yet we all face situations that test our ideals and values with no clear right answer. In a world where compromise is an essential aspect of life, authors Lily Zheng and Inge Hansen make the bold claim that everyone sells out—and that the real challenge lies in doing so ethically. Zheng and Hansen share stories from a diversity of people who have found their own answers to this dilemma and offer new ways to think about marginalization, privilege, and self-interest. From these stories, they pull out teachable skills for taking the step from selling out to selling out ethically. *The Ethical Sellout* is for all those committed to maintaining their integrity in a messy world.

David Hilbert was arguably the leading mathematician of his generation. He was among the few mathematicians who could reshape mathematics, and was able to because he brought together an impressive technical power and mastery of detail with a vision of where the subject was going and how it should get there. This was the unique combination which he brought to the setting of his famous 23 Problems. Few problems in mathematics have the status of those posed by David Hilbert in 1900.

Mathematicians have made their reputations by solving individual ones such as Fermat's last theorem, and several remain unsolved including the Riemann hypotheses, which has eluded all the great minds of this century. A hundred years on, it is timely to take a fresh look at the problems, the man who set them, and the reasons for their lasting impact on the mathematics of the twentieth century. In this fascinating new book, Jeremy Gray and David Rowe consider what has made this the pre-eminent collection of problems in mathematics, what they tell us about what drives mathematicians, and the nature of reputation, influence and power in the world of modern mathematics. The book is written in a clear and lively manner and will appeal both to the general reader with an interest in mathematics and to mathematicians themselves.
