If we could understand the scientific and engineering principles behind recycling, our ability to use reprocessed materials would improve considerably. If we could then apply those principles, our efforts to process and recycle waste would be significantly more efficient and cost-effective. Practical Handbook of Processing and Recycling Municipal Waste provides all of the information necessary for vastly improving the way we recycle materials. It first develops basic engineering and scientific theories related to processing and recycling municipal waste. The authors then show how the behavioral characteristics of waste can actually be predicted with some degree of accuracy, hence turning waste disposal engineering from a matter of guesswork into a science. From Europe to the United States to the Far East, humankind understands the need for - and the challenges of - recycling and reusing waste. This handbook is the guide to successful, efficient waste processing and reuse.

Although use of conveyors in industry is significant, good and comprehensive literature from the topic is not available. Now based on 20 years of teaching experience and 25 years of conveyor designer experience I have written the book. In the book following conveyors are covered: chain conveyor, screw conveyor, elevator, belt conveyor, and locker belt conveyor. In the book is explained use of bulk material conveyors, structures, operation, and as main topic design with calculation guidelines and in addition there is practical examples from every conveyor. In design and examples are included in addition to normal capacity and power calculations also structural design and dimensioning of axles and bearings and belts, chains, chain wheels and so on. From some of the examples also assembly drawings and technical drawings are made. The book is written primarily to engineer level designers and in general to conveyor manufacturing companies. The book is also suitable for mechanical engineer students.

Around the world concerns about cost, efficiency, and safety - employee, product, process and consumer -- have led to changes in the way food plants are planned, constructed and evaluated. From initiation of major capital requests to legal design requirements to project management and plant operations, food engineers and scientists must understand the myriad of requirements and responsibilities of successful food facilities. J. Peter Clark provides that guidance in this complete volume. Included are: A summary of lessons on understanding how management evaluates potential investments and how they can contribute to ultimate shareholder value, and checklists to help accurately estimate capital and operating costs Important, and in some cases unique, features of a food plant including focus on food safety. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art. Volume 9: Safety in Underground Construction contains the contributions presented in the eponymous Technical Session during the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. The contributions cover a wide range of topics, tunnel inspection analysis, via risk assessment for maintenance planning and civil engineering constraints on tunnel ventilation and safety, to CFD simulations of longitudinal ventilation of a road tunnel. The book is a valuable reference text for tunnelling specialists, owners, engineers, archaeologists, architects, artists and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.
