Explanation of
break-even
point: The
point at which
total of fixed
and variable
costs of a
business
becomes
equal to its
total revenue
is known as
break-even
point (BEP). At
this point, a
business
neither earns
any profit nor
suffers any
loss. Break-
even point is
therefore also
known as no-
profit, no-loss

<p>point or zero profit point. Break-even point analysis - explanation, formula, example ... There Are Practical Problems To Interpreting Break Even Point Calculations In the real world, a simple break even point calculation can send misleading signals. Like many accounting numbers, absolute accuracy needs to be replaced by a "true and fair" measure. Practical Problems</p>	<p>With Break Even Point Analysis Definition: Break even point shows the output level (units produced or services rendered) at which total revenues just equals to total costs or point at which profit or loss is zero. Though break-even point may be shown in number of units or in terms of revenue, it is commonly expressed in terms of output units. Break Even Point Definition Formula </p>	<p>Solved Example In economy, break even point is when you don't make a profit and you don't lose money either. In other words, your revenue is equal to your expenses. Say $R = \text{revenue}$ and $C = \text{cost}$.
