The Dennis company has been building vehicles since 1895, making it the oldest continuously producing British manufacturer. From its origins in a small Guildford shop, the company has grown to become a major bus manufacturer with its products selling around the world. This book discusses the company's highs and lows, through two world wars, challenging markets and ownership changes. It documents the vehicles produced and their innovative design features, from early cars and street-cleaning machines to vans, buses, trucks, fire engines and ambulances. First-hand descriptions of how, and why, some of the company's most successful products such as the Dart, Trident and Enviro buses evolved. It explains why their once market-leading fire engines are no longer made. It also analyses the reasons why some products were less successful and explores what happened to parts of the company that were sold over the years. Finally, the company's future opportunities and challenges are considered. The author, Andy Goundry, has not only drawn on his own personal experience of almost twenty years of employment with the company but he has drawn on what is left of the company archives, private collections and first-hand accounts, to produce this book as a salutation of over 125 years of continuous manufacturing.

Essential for electrical installers and installation designers, the IEE Wiring Regulations (BS 7671) have been completely restructured and updated for the first time in over a decade: this 17th Edition of the IEE Wiring Regulations (BS 7671: 2008) will come into effect in June 2008. Guide to the Wiring Regulations is an authoritative and accessible guide to the 17th Edition, illustrating the changes and providing real solutions to the problems that can often occur with practical interpretation. Written and developed by the Electrical Contractors' Association, Guide to the Wiring Regulations brings a wealth of experience to the subject and offers clear explanations of the changes in the Standard. Starting with full coverage of the legal requirements the book then goes on to: provide extensive

advice on circuit design, selection and erection, wiring systems, earthing and bonding; explore the additional requirements of the Standard for protection against voltage disturbances and implementation of measures against electromagnetic influences (EMC); elaborate on the alterations to the inspection and testing requirements; feature practical information on the new special locations included in the 17th Edition, particularly exhibitions, shows and stands, floor and ceiling heating systems, mobile or transportable units and photovoltaic power systems; highlight the changes made in the new edition to existing special locations, including bathrooms, swimming pools, agricultural and horticultural premises and caravan/camping parks. Guide to the Wiring Regulations is an outstanding resource for all users of the 17th Edition IEE Wiring Regulations (BS 7671: 2008) including electricians who want a better understanding of the theory behind the Standard, electrical technicians, installation engineers, design engineers, and apprentices. In this book, Louise Revell examines questions of Roman imperialism and Roman ethnic identity and explores Roman imperialism as a lived experience based around the paradox of similarity and difference. Her case studies of public architecture in several urban settings provides an understanding of the ways in which urbanism, the emperor and religion were part of the daily encounters of the peoples in these communities. Revell applies the ideas of agency and practice in her examination of the structures that held the empire together and how they were implicated within repeated daily activities. Rather than offering a homogenized "ideal type" description of Roman cultural identity, she uses these structures as a way to understand how these encounters differed between communities and within communities, thus producing a more nuanced interpretation of what it was to be Roman. Bringing an innovative approach to the problem of Romanization, Revell breaks from traditional models and cuts across a number of entrenched debates such as arguments about the imposition of Roman culture or resistance to Roman rule.

A hilarious, quirky, and unflinchingly honest memoir about one young woman's life-long (and totally unsuccessful) search for love. "I've been single for my entire life. Not one boyfriend. Not one short-term dating situation. Not one person with whom I regularly hung out and kissed on the face." So begins Katie Heaney's memoir of her years spent looking for love, but never quite finding it. By age 25, equipped with a college degree, a load of friends, and a happy family life, she still has never had a boyfriend...and she's barely even been on a second date. Throughout this laugh-out-loud funny book, you will meet Katie's loyal group of girlfriends, including flirtatious and outgoing Rylee, the wild child to Katie's shrinking violet, as well as a whole roster of Katie's ill-fated crushes. And you will get to know Katie herself -- a smart, modern heroine relaying truths about everything from the subtleties of a Facebook message exchange to the fact that "Everybody who works in a coffee shop is at least a little bit hot." Funny, relatable, and inspiring, this is a memoir for anyone who has ever struggled to find love, but has also had a lot of fun in the process.

From beach encounters, aquaculture perils, and processed-food poisoning to snake bites and biological warfare, natural toxins seem never to be far from the public's sight. A better understanding of toxins in terms of their origin, structure, structure-function relationships, mechanism of action, and detection and diagnosis is of utmost importance to human and animal food safety, nutrition, and health. In addition, it is now clear that many of the toxins can be used as scientific tools to explore the molecular mechanism of several biological processes, be it a mechanism involved in the function of membrane channels, exocytosis, or cytotoxicity. Several of the natural toxins have also been approved as therapeutic drugs, which has made them of interest to several pharmaceutical companies. For example, botulinum neurotoxins, which have been used in studies in the field of neurobiology, have also been used directly as therapeutic drugs against several neuromuscular diseases, such as strabismus and blepharospasm. Toxins in combination with modern biotechnological approaches are also being investigated for their potential use against certain deadly medical problems. For example, a combination of plant toxin ricin and antibodies is being developed for the treatment of tumors. The great potential of natural toxins has attracted scientists of varying backgrounds-pure chemists to cancer biologists-to the study of fundamental aspects of the actions of these toxins.
