Now in its sixth edition,
Robert M. Bojar's Manual
of Perioperative Care in
Adult Cardiac Surgery
remains the go-to
practical guide for all of
those involved in the care
of the cardiac surgery

patient. Written in outline
format, it provides a
comprehensive, detailed,
and clearly explained
review of cardiac surgical
disease and perioperative
management that is of
value to practicing cardiac
surgeons as well as to
cardiologists, residents,
fellows, advanced practice
providers, critical care
and floor nurses,
perfusionists, and medical
students. Extensively
rewritten with updated

references to incorporate
the latest concepts,
guidelines, protocols, and
medications used in
cardiac surgical practice,
this classic text retains
the pragmatic features
that have made it the
gold standard reference
that clinicians have used
worldwide for the past 30
years. Highlights include:
Full coverage of cardiac
surgical diseases,
including
pathophysiology,

indications for surgery per guidelines, and figures of operative procedures and diagnostic techniques, with a panoply of examples Chronologic evaluation of patients from preoperative assessment to intraoperative considerations to postoperative care for each procedure Extensive chapters discussing organ system management in the ICU, followed by a discussion of later postoperative management and problems Incorporation of

newer techniques (TAVR, Mitraclip, etc.) within the chronologic format Easy access to information using an outline format, markers on the free edges to identify chapters, synopsis pages at the beginning of each chapter, and a comprehensive index to provide easy referencing within the text Updated references throughout that are available from on-line resources 21 appendices summarizing order sheets, protocols, commonly used drug doses, body mass index,

and other important information Praise for the fifth edition: "Surgeons are frequently asked to recommend a text that can be used to guide the care of their patients. This comprehensive text is the standard by which any other text should be judged." —Critical Care Medicine "It remains a classic and a must have for anyone involved in cardiac surgery."

Challenging Cases, editor Wickii T. Vigneswaran has selected 50 challenging cases presented by leading thoracic surgeons. Each case highlights a unique situation from which other surgeons can learn. The selection of Cases includes patients with diagnostic challenges, unconventional and innovative solutions, unexpected findings, and new techniques to treat old problems. The discussions after each case provide a useful starting point for further

inquiry. Amply illustrated, this book reflects the wisdom and experience of world leaders in thoracic surgery and teaches junior surgeons how to approach the key thoracic surgical procedures, and how to manage in unexpected and difficult situations. This is a Masterclass in thoracic surgery. Editor Bio Wickii T. Vigneswaran is the Professor and Chief of Thoracic Surgery for the Department of Thoracic and Cardiovascular Surgery at Loyola University Health System.

A History of Cardiac Surgery: An Adventurous Voyage from Antiquity to the Artificial Heart Oxford University Press
Highly Commended, BMA Medical Book Awards 2014 The development of new techniques as well as the refinement of established procedures has led to great progress in cardiac surgery. Providing an ideal synopsis of the growth in this area, Cardiac Surgery: Recent Advances and Techniques systematically reviews all

the new developments in cardiac surgery, from transcatheter aortic valve implantation to minimally invasive mitral valve surgery. Recognised leaders and innovators throughout the world describe each technique and include up-to-date information regarding current trials relating to each new procedure. Each chapter contains images and drawings to illustrate the techniques and the book provides ample references to facilitate further study. This volume is designed for anyone

involved in the practice of cardiac surgery, from residents at all stages of their training programme to established cardiac surgeons. Cardiologists and cardiothoracic intensive care unit specialists will also find this book useful to better understand the management of patients undergoing these procedures. All cardiac surgeons are required to keep up to date with current practice for recertification purposes. *Cardiac Surgery: Recent Advances and Techniques*

 Unique in the field of cardiac surgery, *Khonsari's Cardiac Surgery: Safeguards and Pitfalls in Operative Technique* details the most important techniques in a concise, readable, and richly illustrated format, with a focus on avoiding and managing surgical pitfalls and complications. From general considerations through the surgical correction of acquired and

congenital heart conditions, it provides a wealth of practical, hands-on guidance to help both seasoned and less-experienced cardiac surgeons achieve optimal outcomes.

This book provides a multidisciplinary approach to the maintenance of hemostasis and minimisation of blood loss in patients undergoing cardiac surgery. All aspects of patient blood management are covered

that may contribute to a reduction in perioperative bleeding and transfusion requirements in cardiac surgery. This is achieved through practical cases and a theoretical background that gives a better understanding of patient hemostasis and the occurrence of bleeding complications. This book is relevant to cardiac surgeons, anesthesiologists, clinical perfusionists, hematologists and intensivists. [Heart 411](#) Springer Science & Business Media

Following on from the success of the international best-seller "Key Questions in Cardiac Surgery", the long-awaited "Key Questions in Thoracic Surgery" will be the next book in the Key Questions series to be released. This book will systematically cover all the main topics involved in the current practice of a thoracic surgeon. It will incorporate current guidelines for practice (such as from the American College of Chest Physicians, British Thoracic Society and

European Respiratory Society) and up-to-date information based on current literature. Each chapter will be structured to include aetiology, pathophysiology, clinical features, indications for surgery, perioperative management, surgical options and postoperative care. Possible complications will be discussed and the results of current practice presented. Importantly, there will be a section on basic sciences related to the practising thoracic surgeon and a further

section on thoracic investigations with many images illustrating the variety of pathologies. Each chapter will also contain important references for further reading and greater depth of knowledge. The data and body of knowledge presented in this book is strictly evidence-based and is relevant to all thoracic surgical trainees, at any stage of their training programme. It will provide residents, fellows and specialist registrars the necessary information to carry out their daily

duties. Respiratory physicians and thoracic intensive care unit specialists will also find the book useful in terms of the indications and surgical management of these patients, as they are integral to the thoracic surgical process. Another important group is the nursing staff, physiotherapists and other professions allied to medicine working with patients with adult thoracic disease either pre-operatively or post-operatively, as it will help to give a detailed

understanding of the principles surrounding thoracic surgical disease. Most importantly, the book is ideal as a revision aid for residents/registrar undertaking their Cardiothoracic Surgery Board examinations around the world. Although these examinations vary in format in different countries, this book is applicable to all cardiothoracic surgical trainees. Its concise, yet complete coverage of the important topics, make it the ideal guide to answer

the key questions in thoracic surgery that are asked within the confines of an examination.

Most patients with critical cardiac or thoracic conditions will at some stage pass through the cardiothoracic critical care unit. Critical care presents more complex clinical data than any other area of medicine. The new edition of Core Topics in Cardiothoracic Critical Care focuses on the latest practise in the management of patients

in cardiothoracic intensive care. The practice of cardiothoracic critical care medicine is constantly evolving, and this new edition reflects the modernized learning styles for trainees. Each chapter includes key learning points as well as sample multiple choice questions and answers to assist in exam preparation. This edition also features updated chapters on ECMO, perioperative management of patients undergoing emergency cardiothoracic surgery,

and advanced modes of organ support for patients. This text provides key knowledge in a concise and accessible manner for trainees, clinicians and consultants from specialities and disciplines such as cardiology and anaesthesia, and nursing and physiotherapy.

Cardiac Surgery in the Adult 5/e CRC Press

Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL)

method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia

practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The 'Stem Case and Key Questions' and 'Discussion' sections can serve as the basis for

interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

Evidence-based

Management of Hypertension
 Nicole Kupchik

The treatment of hypertension is now evolving into a decision-making process of ever greater complexity. Not only has the range of drugs available increased but so too has our knowledge of the diversity of individual patients' responsiveness to therapy, and the need to tailor their treatment with reference to a wide variety of additional factors. In order to provide effective patient

care, the clinician needs to be aware of all the options available, but also of the evidence supporting their use and the extent to which that evidence justifies the choices made. In this new volume, leading authorities in their fields draw on the available evidence to provide answers to a series of key clinical questions facing the clinician treating hypertension: Should we treat prehypertension? How does the choice of therapy change in the presence of comorbidities

such as obesity, ischemic heart disease, left ventricular hypertrophy, diabetes or cerebrovascular disease? Evidence-based Management of Hypertension provides answers to these and many other questions, as the authors present an expert analysis of the available evidence and offer authoritative recommendations for treatment planning. In each chapter, tables highlight evidence from a variety of sources, and every chapter concludes

with a series of key practice points that present a summary of evidence-based recommendations for best practice, graded according to the quality of that evidence. For any clinician concerned with the care of the hypertensive patient, this volume will be a valuable aid to treatment planning and long-term management. *Cardiac Surgery Essentials for Critical Care Nursing* McGraw Hill Professional
The definitive guide to

heart health from two of America's most respected doctors at Cleveland Clinic, the #1 hospital for heart health in America. Are you one of the eighty-two million Americans currently diagnosed with cardiovascular disease—or one of the millions more who think they are healthy but are at risk? Whether your goal is to get the best treatment or stay out of the cardiologist's office, your heart's health depends upon accurate information and correct answers to key questions.

In Heart 411, two renowned experts, heart surgeon Marc Gillinov and cardiologist Steven Nissen, tackle the questions their patients have raised over their decades of practice: Can the stress of my job really lead to a heart attack? How does exercise help my heart, and what is the right amount and type of exercise? What are the most important tests for my heart, and when do I need them? How do symptoms and treatments differ among men, women, and children?

Backed by decades of clinical experience and up-to-the-minute research, yet written in the accessible, down-to-earth tone of your trusted family doctor, Heart 411 cuts through the confusion to give you the knowledge and tools you need to live a long and heart-healthy life.
