The PACFISH/INFISH Biological Opinion (PIBO) Effectiveness Monitoring Program was initiated in 1998 to provide a consistent framework for monitoring aquatic and riparian resources on most

Forest Service and Bureau of Land Management lands within the Upper Columbia River Basin. This 7-year status report gives our funding sources, partners, and the public an overview of past activities, current business practices, products and publications, and future program directions. It is designed to increase accountability and summarize our accomplishments during the initial phase of the program.

Electrical Engineer's Reference Book, Fourteenth Edition focuses on electrical engineering. The book first discusses units, mathematics, and physical quantities, including the international unit system, physical properties, and electricity. The text also looks at network and control systems analysis. The book examines materials used in electrical engineering. Topics include conducting materials, superconductors, silicon, insulating materials, electrical steels, and soft irons and relay steels. The text underscores electrical metrology and instrumentation, steam-generating plants, turbines and diesel plants, and nuclear reactor plants. The book also discusses alternative energy sources. Concerns include wind, geothermal, wave, ocean thermal, solar, and tidal energy. The text then looks at alternating-current generators. Stator windings, insulation, output equation, armature reaction, and reactants and time-constraints are described. The book also examines overhead lines, cables, power transformers, switchgears and protection, supply and control of reactive power, and power systems operation and control. The text is a vital source of reference for readers interested in electrical engineering.

This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992. Jetting techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics -- materials; jetting basics -- fluid mechanics; mining and quarrying; civil engineering; new developments; petrochem; cleaning and surface treatment; and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. The volume will be of interest to researchers, developers and manufacturers of systems, equipment users and contractors.

This Standard Guideline covers the planning, design, pipe materials, and construction of microtunneling. Microtunneling is defined as a trenchless construction method for installing pipelines. The North American definition of microtunneling describes a method and does not impose size limitations on that method. The tunnel may be considered a microtunnel if all of the following features apply to construction: the microtunneling boring machine is remote controlled, a laser guidance system is employed, a jacking system is used for thrust, and continuous pressure is provided to the face of the excavation to balance groundwater and earth pressures. This Standard Guideline is a vital reference for owners, engineers, contractors, and construction managers.

This technical reference outlines the Bureau of Land Management's (BLM's) process for assessing the functioning condition of riparian areas on public lands. Emphasis is placed on the interaction of vegetation, landforms/soils, and hydrology in defining capability and potential of an area. The importance of using an interdisciplinary team is also stressed. The document describes all four categories of functioning condition--proper functioning condition, functional--at risk, nonfunctional,

and unknown, and discusses management strategies for each.

India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

New England archaeology has not always been everyone's cup of tea; only late in the Golden of nineteenth-century archaeology, as archaeology's focus turned westward, did a few pioneers look northward as well, causing a brief flurry of investigation and excavation. Between 1892 and 1894, Charles C. Willoughby did some exemplary excavations at three small burial sites in Bucksport, Orland, and Ellsworth, Maine, and made some models of that activity for exhibition at the Chicago World's Fair. These activities were encouraged by E Putnam, director of the Harvard Peabody Museum and head of anthropology at the "Columbian" Exposition. Even earlier, another director of the Peabody, Jeffries Wyman, spawned some real interest in the shellheaps of the Maine coast, but that did not last very long. Twentieth-century New England archaeology, specifically in Maine, was--for its first fifty years--rather low key too, with short-lived but important activity by Arlo and Oric (a Bates Harvard student) prior to World War Later, I. another Massachusetts institution, the Peabody Foundation at Andover, took some minor but responsible steps toward further understanding of the area's prehistoric past.

Opportunities and optimism in Aging. Issues in Aging, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging--exhibiting both the problems and

the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. Learning Goals -Upon completing this book, readers will be able to: -Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions -Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know -Separate the myths from the realities of aging - Recognize the human side of aging -Trace the transformation of pension plans, health, and opportunities for personal expression and social engagement to the new ecology of aging today
