Cognitive Radio

Technology Applications
For A cognitive radio is a
radio that can be
programmed and
configured dynamically to
use the best wireless
channels in its vicinity to

avoid user interference and congestion. Such a radio automatically detects available channels in wireless spectrum, then accordingly changes its transmission or reception parameters to allow more concurrent wireless communications in a given spectrum band at one location. This process is a form of dynamic spectrum management. Cognitive radio - Wikipedia Cognitive Radio Technology Applications for Wireless and Mobile Ad Hoc Networks provides an in-

depth exploration of cognitive radio and its applications in mobile and/or wireless network settings. The book combines a discussion of existing literature with current and future research to create an integrated approach that is useful both as a textbook for students of computer science and as a reference book for researchers and practitioners engaged in solving the complex problems and future ...Amazon.com: Cognitive Radio Technology

A solution would be to have a cognitive radio that can utilize the spectrum that is not heavily used so as to ease congestion in other areas. Cognitive Radio in VANET: Media ...This chapter presents a cognitive radio (CR) roadmap, including a discussion of cognitive radio technologies and applications. A cognitive radio has the following characteristics: sensors creating awareness of the environment, actuators to interact with the environment, a model of the environment that includes state or memory of observed events, a learning capability that helps to select specific actions or adaptations to reach a performance goal,

and some degree of autonomy in action. Cognitive Radio Technology | ScienceDirect Cognitive Radio Technology Edited by Bruce A.
