Anomaly and Mineral Prospectivity Mapping in GIS Description. Geochemical Anomaly and Mineral Prospectivity Mapping in GIS documents and explains, in three parts, geochemical anomaly and mineral prospectivity mapping by using a geographic information system (GIS). Part I reviews and couples the concepts of (a) mapping geochemical anomalies and mineral prospectivity and (b) spatial data models, management and operations in a GIS. Geochemical Anomaly and Mineral Prospectivity Mapping in ... Abstract. In this paper, sequential Gaussian simulation (SGS) and number-size (N-S) fractal modeling were used for copper geochemical anomaly mapping in the western part (training area) of Kuhshah-e-Urmak area, Iran. Then, according to the generated anomaly model in the training area, mineral potential mapping (MPM) was performed for the entire study area based on a well-fitted regression model as a data-driven method. Mineral prospectivity modeling considering geological factors may provide qualitative support for the exploration and semiquantitative prediction of geophysical and geochemical anomaly amplitudes and patterns (Clark, 2014). These factors under consideration mainly involve the tectonic setting, magmatic intrusions, composition of host rocks, depth of emplacement and post-emplacement erosion level, post-emplacement faulting and tilting, depth of burial beneath younger covers, and metamorphism.
