BIM (Building
Information Modelling)
is transforming working
practices across the
built environment
sector, as clients,

professionals,
contractors and
manufacturers
throughout the supply
chain grasp the
opportunities that BIM
presents. The first book
ever to focus on the
implementation of BIM
processes in landscape
and external works,
BIM for Landscape will
help landscape

professionals understand what BIM means for them. This book is intended to equip landscape practitioners and practices to meet the challenges and reap the rewards of working in a BIM environment - and to help professionals in related fields to understand how BIM processes can be brought into landscape projects. BIM offers significant benefits to the landscape profession, and heralds a new chapter in interdisciplinary relationships. BIM for Landscape shows how BIM can enhance collaboration with other professionals and clients, streamline information processes, improve decision-making and deliver well-designed

landscape projects that are right first time, on schedule and on budget. This book looks at the organisational, technological and professional practice implications of BIM adoption. It discusses in detail the standards, structures and information processes that form BIM Level 2-compliant workflows, highlighting the role of the landscape professional within the new ways of working that BIM entails. It also looks in depth at the digital tools used in BIM projects, emphasising the 'information' in Building Information Modelling, and the possibilities that data-rich models offer in landscape design, maintenance and management. BIM for

Landscape will be an essential companion to the landscape professional at any stage of their BIM journey.
