AP Statistics; Chapter 8 Test. Answer

choice E may be selected as the student

may not know the difference at all. Choice

A may be selected because students

might not have subtracted the probability

from 1. Choice C may be selected because

students may have used 5 as x rather than

4 for x-1.AP Statistics; Chapter 8 Test by

Sunny Grae on PreziOne frequently used

test is the DRP, or Degree of Reading Power. A researcher suspects that the mean score  $\mu$  of all third- graders in Henrico County Schools is different from the national mean, which is 32. To test her suspicion, she administers the DRP to an SRS of 44 Henrico County third-grade students.A local newspaper in a large city wants to assess support ...PTS: 1 REF: Test 8A 13. ANS: C /C/Correct! Plot Z is a small sample, but the distribution of sample data is symmetric and has no outliers. It should be safe to use the t-procedure in this case. Plot X has an outlier, and the sample size in Plot Y is too small to compensate for the strong skew in the data.
