*Assessment For Learning* Academic Press

Print+CourseSmart

*Analyzing and Conceptualizing the Theoretical Foundations of Nursing* Springer

An Introduction to Distance Education offers a comprehensive look at distance education today and outlines current theories, practices and goals. The goal of this book is to provide a detailed review of the influence of historical distance education theory and practice, and the current changes occurring in the field today. It outlines the practical skills and information that are essential to effective distance education design, delivery and navigation.

*The Earthscan Companion* Jones & Bartlett Learning

With the interest in practice theory and praxeology on the rise, praxeology can be considered an emerging new methodological as well as theoretical paradigm which successfully overcomes epistemological dichotomies of conventional approaches. The articles in this volume serve as starting points for rendering contemporary practice theory approaches useful for the analysis of political events and processes, without reducing the political aspect a priori to the formal policy sphere. In this context, Praxeological Political Analysis demonstrates that praxeological research is now increasingly addressing issues which are considered virulent in, for instance, the consumer, sustainability or political spheres. Following on from this key focus on political analysis, this title also seeks to expand the current status of primarily political science adaptations of practice theory approaches to the analysis of predominantly narrowly defined political practices. Written with an explicit focus on diverse political aspects and dimensions in the performative enactment of social practices, this title will appeal to post-graduate students and scholars interested in sociology of politics, social and public policy, development in social theory and political research methods.

*Teaching Mathematics in the Visible Learning Classroom, Grades 6-8* Routledge

This book explores the new product development process of firms developing frugal innovation for the base-of-the-pyramid (BOP) markets in developing countries. Frugal innovations are products characterised by an affordable price-point, durability, usability and core functionalities that are highly adapted to BOP consumers' needs. Frugal products have the potential to drive the development progress and living standards of low-income consumers. With an innovation framework developed from worldwide frugal case studies, this book provides detailed insights through two in-depth start-up firms in Indonesia that have successfully launched frugal products for the low-income market. These two start-ups have addressed two major development challenges for not just Indonesia, but also the global BOP market - traditional methods of cooking and access to clean drinking water. A detailed roadmap is developed from insights into the processes and management decisions of these two start-ups and combined with previous studies on frugal products. Providing a detailed roadmap across the different phases and stages of the new product development process when developing frugal products, this book will be insightful to not only innovators but also investors and government agencies supporting their activities.

*The Methodology of Discourse Analysis* Routledge

Assessment for Learning is based on a two-year project involving thirty-six teachers in schools in Medway and Oxfordshire. After a brief review of the research background and of the project itself, successive chapters describe the specific practices which teachers found fruitful and the underlying ideas about learning that these developments illustrate. Later chapters discuss the problems that teachers encountered when implementing the new practices in their classroom and give guidance for school management and LEAs about promoting and supporting the changes. --from publisher description

*Putting it into Practice* IGI Global

Vygotsky's legacy is an exciting but often confusing fusion of ideas. An Introduction to Vygotsky provides students with an accessible overview of his work combining reprints of key journal and text articles with editorial commentary and suggested further reading. Harry Daniels explores Vygotsky's work against a backdrop of political turmoil in the developing USSR. Major elements include use of the "culture" concept in social development theory and implications for teaching, learning and assessment. Academics and students at all levels will find this an essential key source of information.

John Wiley & Sons

This book presents the proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021), held online on June 13-18, 2021. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Healthcare Ergonomics, Health and Safety, Musculoskeletal Disorders, HF/E Contribution to cope with Covid-19.

**Understanding Teaching and Learning in a New Era** AuthorHouse

Longstanding cultural heritages about the nature of knowledge continue to dominate Western education. Yet the ways of knowing represented through teaching and workplace practices, including assessment, and their relationship to views of learning, are often ignored in debates about learning. This book provides a rich collection of readings that challenge traditional understandings of knowledge and the view of mind that underpins them. It offers socioculturally informed alternatives and tools for innovating change and transforming practice that value different ways of knowing, embracing those that learners bring to educational and workplace settings. The book takes forward thinking about curriculum in a number of unique and important ways. It adopts a relational view of learning and knowledge, covers educational and workplace learning, and examines knowledge from a sociocultural perspective where learner identities are conceived as forms of competency or knowledge. It presents challenging ways of thinking about knowledge and learning and considers

how to enact these in practice. Drawing from the international literature, this book will be essential reading for students of curriculum, learning and assessment in all sectors from primary to further and higher education. It is suitable as a core text for masters and taught doctorate programmes. It will also be of interest to a wide range of professionals involved with the processes of curriculum, learning and the practice of teaching and assessment. It will be relevant to those in work-based and professional education and training and informal educational settings, as well as traditional educational institutions at all levels. A unique collection in a field that is underrepresented, it will also be of interest to an academic audience.

**Philosophies and Theories for Advanced Nursing Practice** Routledge

Concise, contemporary, and accessible to students with little-to-no prior knowledge of nursing theory, *Theoretical Basis for Nursing*, 6th Edition, clarifies the application of theory and helps students become more confident, well-rounded nurses. With balanced coverage of grand, middle range, and shared theories, this acclaimed, AJN Award-winning text is extensively researched and easy to read, providing an engaging, approachable guide to developing, analyzing, and evaluating theory in students' nursing careers. Updated content reflects the latest perspectives on clinical judgment, evidence-based practice, and situation-specific theories, accompanied by engaging resources that give students the confidence to apply concepts to their own practice.

**An Introduction to Distance Education** Cambridge University Press

Select the right task, at the right time, for the right phase of learning How do you generate that lightbulb "aha" moment of understanding for your students? This book helps to answer that question by showing Visible Learning strategies in action in high-impact mathematics classrooms. Walk in the shoes of teachers as they engage in the countless micro-decisions required to balance strategies, tasks, and assessments, demonstrating that it's not only what works, but when. A decision-making matrix and grade-leveled examples help you leverage the most effective teaching practices at the most effective time to meet the surface, deep, and transfer learning needs of every student.

*Measuring Truth and Uncertainty* Foundations of Clinical Nurse Specialist Practice

A proven approach to better teaching and learning. Hollingsworth and Ybarra have refined and extended their highly successful methods in the second edition of this invaluable bestseller. EDI helps teachers deliver well-designed lessons that significantly improve achievement for all learners. Written in an easy-to-read style, this updated resource provides teachers with fine-tuned strategies and samples that illustrate what EDI techniques look like in inclusive and diverse classrooms. Readers will find:

- Strategies for student engagement
- Expanded feedback strategies
- Clear alignment to standards
- A new strategy for skill development and guided practice
- Expanded information about differentiation and scaffolding
- An online bank of more than 1000 lessons

McGraw-Hill Education (UK)

The long-awaited third edition of *Pediatric Chiropractic* takes the valuable second edition to a whole new level, offering new chapters, full-color photos, illustrations, and tables to provide the family wellness chiropractor and the student of chiropractic a valuable reference manual covering all aspects of care for the pediatric and prenatal populations. Internationally recognized authorities Claudia Anrig, DC and Gregory Plaughter, DC have invited the leaders in their fields to contribute to this precedent-setting textbook and now offer even more valuable information for the practitioner.

*Eureka Math Pre-K Study Guide* Springer Publishing Company

Contemporary science teaching approaches focus on fostering students to construct new scientific knowledge as a process of inquiry rather than having them act as passive learners memorizing stated scientific facts. Although this perspective of teaching science is clearly emphasized in the National Research Council's National Science Education Standards (NRC, 1996), it is however challenging to achieve in the classroom. Science teaching approaches should enhance students' conceptual understanding of scientific concepts which can be later utilized by students in deeper recognition of real world (Marsak & Janouskova, 2007). This book identifies and describes several different contemporary science teaching approaches and presents recent applications of these approaches in promoting interest among students. It promotes conceptual understanding of science concepts among them as well. This book identifies pertinent issues related to strategies of teaching science and describes best practice The chapters in this book are culmination of years of extensive research and development efforts to understand more about how to teach science by the distinguished scholars and practicing teachers.

**The Power of the Well-Crafted, Well-Taught Lesson** Lippincott Williams & Wilkins

A radical, interdisciplinary reworking of legitimation, using ethnographic insights to explore everyday non-state authority in Tanzania.

*Analysing Exemplary Science Teaching* Lippincott Williams & Wilkins

Although there has traditionally been considerable field-level attention on how consultants market their ideas and practices, there is still a lack of research that discusses the earlier intra-organizational phases in the development process. While the present literature provides important insights that enhance our understanding of consulting, the consultancy industry, and the way that consultants present their ideas and services on the market for management solutions, we know relatively little about the way knowledge-based innovations develop within consultancy firms and the mechanisms that shape the intra-organizational evolution of these ideas and practices. This book seeks to address this gap by revealing how the development of new ideas and practices takes shape in consultancies. The work addresses questions such as: In which way do consultancies sense the contemporary market needs? How do new ideas and practices become established within a consultancy? How do consultancies seek to maintain their repertoire? And what role do these new ideas and practices play in their assignments? To provide more insight into these different aspects of knowledge-based innovation in consultancies, the book draws on and integrates literature from diverse relevant fields such as product innovation and market orientation, but also uses institutional and practice-based perspectives. The research presented in this book can be seen in the light of emerging research into 'knowledge-based innovation' and 'new concept development' that concentrate on empirically studying how knowledge entrepreneurs seek to develop commercially viable ideas and practices that have the potential to have a significant impact on management and organizational praxis.

**Threshold Concepts in Practice** Springer Nature

*Advanced Practice Nursing: Essential Knowledge for the Profession*, Fourth Edition is a core advanced practice text used in both Master's Level and DNP programs.

*Theoretical Basis for Nursing* Frontiers Media SA

"Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice, and the learning experiences of their students, through the lens of the Threshold Concepts Framework. In any discipline, there are certain concepts – the 'jewels in the curriculum' – whose acquisition is akin to passing through a portal. Learners enter new conceptual (and often affective) territory. Previously inaccessible ways of thinking or practising come into view, without which they cannot progress, and which offer a transformed internal view of subject landscape, or even world view. These conceptual gateways are integrative, exposing the previously hidden interrelatedness of ideas, and are irreversible. However they frequently present troublesome knowledge and are often points at which students become stuck. Difficulty in understanding may leave the learner in a 'liminal' state of transition, a 'betwixt and between' space of knowing and not knowing, where understanding can approximate to a form of mimicry. Learners navigating such spaces report a sense of uncertainty, ambiguity, paradox, anxiety, even chaos. The liminal space may equally be one of awe and wonderment. Thresholds research identifies these spaces as key transformational points, crucial to the learner's development but where they can oscillate and remain for considerable periods. These spaces require not only conceptual but ontological and discursive shifts. This volume, the fourth in a tetralogy on Threshold Concepts, discusses student experiences, and the curriculum interventions of their teachers, in a range of disciplines and professional practices including medicine, law, engineering, architecture and military education. **Concepts, Methodologies, Tools, and Applications** Corwin Press

The task environment of NGOs is changing rapidly and significantly, making new demands on their management and leadership. This Companion discusses the complexities involved. It illustrates how

NGOs can maintain performance and remain agile amidst increasing uncertainties. These factors include the position of NGOs in civil society, their involvement in governance and coping with the effects of the securitisation of international aid. Complementing *The Earthscan Reader in NGO Management*, selected contributions and specially commissioned pieces from NGO thought-leaders and practitioners, provide the reader with insights on the emerging thinking, competences and practices needed for success in managing and leading tomorrow's NGOs.

*Theoretical Nursing* Lippincott Williams & Wilkins

This book fills the gap in the literature on nursing theories by presenting the background information on situation specific theories such as philosophical bases and current status of situation specific theories and providing a collection of situation specific theories that have been developed. It provides specific guidelines for nursing research and practice, essentials for PhD and DNP students to complete the requirements for their degrees (e.g., dissertation, QI project). In addition, this book can be used in theory courses in other graduate nursing programs that require theoretical bases for their comprehensive exam or scholarly project (e.g., MSN, NP). Throughout nursing history, nursing theories have evolved within the contexts of changing and emerging theoretical needs of nursing discipline. Subsequently, several different types of nursing theories have been proposed, developed, and used in nursing education, research, and practice. Situation specific theories could be easily adopted and used in nursing practice and research due to their foci on specific populations or particular fields. Since situation specific theories were firstly proposed in 1990s, they became a major part of nursing theories in the past two decades, making this book appeals to all levels of nursing students.
