Strategic Brand Management transcript
Verlag

This book is an innovative presentation of

the way in which the descendants of
Muslim immigrants from Algeria in France
perceive and deal with multiple social
identifications. Against the background of
the theory and methodology (such as
Saussure's sign theory, Znaniecki's
sociology, and Brubaker and Cooper's
concepts), Kubera offers a new analysis
into identity in a multicultural society. The
book revolves around a combination of the
modernist and post-modernist paradigms:
highlighting both the constant and
situational aspects of social identity. By
focusing on identifications, the author

shows how to overcome the problem of
"intangibility" of identity in research
practice. Touching on colonialism, gender,
religion, migration, and racism, this will be
an important contribution to students and
scholars across sociology, anthropology,
political science, law, and international
relations.

The Practice of Everyday Life

University of Limerick

There is no more fundamental resource
than water. The basis of all life, water is
fast becoming a key issue in today's world,
as well as a source of conflict. This

fascinating book, which sets out many of the ingenious methods by which ancient societies gathered, transported and stored water, is a timely publication as overextraction and profligacy threaten the existence of aquifers and watercourses that have supplied our needs for millennia. It provides an overview of the water technologies developed by a number of ancient civilizations, from those of Mesopotamia and the Indus valley to later societies such as the Mycenaeans, Minoans, Persians, and the ancient Egyptians. Of course, no book on ancient water technologies would be complete without discussing the engineering feats of the Romans and Greeks, yet as well as covering these key civilizations, it also examines how ancient American societies from the Hohokams to the Mayans and Incas husbanded their water supplies. This unusually wide-ranging text could offer today's parched world some solutions to the impending crisis in our water supply. "This book provides valuable insights into the water technologies developed in ancient civilizations which are the underpinning of modern achievements in water engineering and management

practices. It is the best proof that "the past is the key for the future." Andreas N. Angelakis, Hellenic Water Supply and Sewerage Systems Association, Greece "This book makes a fundamental contribution to what will become the most important challenge of our civilization facing the global crisis: the problem of water. Ancient Water Technologies provides a complete panorama of how ancient societies confronted themselves with the management of water. The role of this volume is to provide, for the first time on this issue, an extensive historical and scientific reconstruction and an indication of how traditional knowledge may be employed to ensure a sustainable future for all." Pietro Laureano, UNESCO expert for ecosystems at risk, Director of IPOGEA-Institute of Traditional Knowledge, Italy
Renault Espace Service and Repair Manual Springer Science & Business Media
 In Pathos, Poetry and Politics, Russell Williams examines the literary style in the work of Michel Houellebecq. This book underlines the extent to which the author's notorious provocations are key to the texture of his novels.

Structures in Fire The Energy and Resources Institute (TERI)
 Annotation This volume is one in a series initiated by the United Nations University Institute of Advanced Studies on the inter-relationship between globalisation and urban transformation. It identifies and describes the inter- and intra-urban transformations of Central and Eastern European cities and considers their pre-1945 historic legacies, the socialist period, and their contemporary transition towards market oriented and democratic systems. The dramatic changes since 1989 including the collapse of Communist ideology, the break-up of the Soviet Union, Czechoslovakia and Yugoslavia, the end of the Cold War and the impact of globalisation and European integration, have reconfigured this region and affected their re-integration into European and global networks. This book first examines the similarities and differences between significant Central and Eastern European cities, comparing the differing patterns of historical context and socialist legacies before 1990, and the impacts of internal and external forces on re-shaping these cities and their paths of transformation

since 1990. It also examines the role of contemporary planning within the overall development of Central and Eastern European cities. The conclusion demonstrates the similarities and differences between Central and Eastern European cities and their re-integration into global networks.

Madagascar Oxford University Press, USA
International voices fill the pages of *Water and Sustainability in Arid Regions*, forming an original scientific exploration of current water research and management issues. In arid regions, agriculture that is ill-adapted to the environment, accelerated urbanization, poverty, and increasing pollution challenge access to and uses of water. Understanding these issues requires incorporating findings from both the physical and social sciences at different temporal and spatial scales. The chapters in this book were written by hydrologists, remote sensing specialists, ecologists, historians, economists, political scientists, architects, archaeologists, and other experts who live in and study arid lands. The authors present updates, overviews, and analyses of water challenges these areas have faced and are

striving to address, from salinization in the fabled Taklimakan Desert in China to land degradation in the northern Mediterranean to groundwater over-exploitation in the southwestern United States. The book also examines desertification, remote sensing, qanat systems, architecture, arsenic contamination, and other case studies from Iran, the Maghreb region, Argentina and Chile, and Mexico. From this conceptual mosaic of comparative perspectives and research methods emerges a strong assumption: an interdisciplinary approach that combines physical and social sciences is the first step toward globally and comprehensively addressing water and sustainability. "This book is a valuable and welcome contribution to the discussion of water and sustainable development. Through the collection of chapters, the book clearly illustrates the contemporary diversity of approaches to water scarcity and presents pertinent and new research findings that readers generally do not find compiled together. The result is a highly relevant, accessible, and timely resource that is unique in its international and interdisciplinary content. This is a must-

read for anyone working on environmental and sustainability issues in arid lands." André Mariotti, University Pierre et Marie Curie, and INSU - CNRS (National Institute for Earth Sciences and Astronomy-National Center for Scientific Research/Centre National de la Recherche Scientifique), France "Anyone who reads this book will find himself or herself contemplating the need to rethink how we approach the issue of water and sustainability in arid lands. Drawing on the expertise of both physical and social scientists, the chapters taken as a whole present global, historic, and current perspectives on water scarcity in a multi-layered way that rarely has been done before." Miguel Solanes, Madrid Water Institute, Spain

The reduction of inequalities within and between countries stands as a policy goal, and deserves to take centre stage in the design of the Sustainable Development Goals agreed during the Rio+20 Summit in 2012. The 2013 edition of *A Planet for Life* represents a unique international initiative grounded on conceptual and strategic thinking, and “ most importantly “ empirical experiments, conducted on five continents and touching on multiple realities. This unprecedented collection of works proposes a solid empirical approach, rather than an ideological one, to inform future debate. The case studies collected in this volume demonstrate the complexity of the new systems required to accommodate each country's specific economic, political and cultural realities. These systems combine technical, financial, legal, fiscal and organizational elements with a great deal of applied expertise, and are articulated within a clear, well-understood, growth- and job-generating development strategy. Inequality reduction does not occur by decree; neither does it

automatically arise through economic growth, nor through policies that equalize incomes downward via ill conceived fiscal policies. Inequality reduction involves a collaborative effort that must motivate all concerned parties, one that constitutes a genuine political and social innovation, and one that often runs counter to prevailing political and economic forces. *The Collaborative Economy in Action: European Perspectives* Univ of California Press

The story of how Chrysler's minivan team created an automobile that captured the 1995 Motor Trend Car of the Year and other major awards - and reinvented a perilously entrenched corporation in the process - is as dramatic and inspiring a story as any in business today. Brock Yates, one of the most respected writers in the auto world, was given unprecedented access to Chrysler - every planning session, presentation, budget review, test drive, assembly line start-up, and marketing launch. The result is a book that unveils the mysteries of modern car-making, revealing how cars are shaped through countless interlinked decisions ranging from size and power to door

configurations, color selections, and innumerable other interconnected details. It also captures the complex process by which the thousands of separate pieces that make up a car are designed, tested, manufactured, and marshaled into place at the exact moment they are needed. For any reader who cares about cars, this is the most intriguing look inside the mysteries of their creation ever written. At the same time, *The Critical Path* recounts an extraordinary drama of all-too-human managers attempting to make something new, in a new way, inside a corporate culture that resists them at every turn. The story of how Chrysler's minivan platform team kept their commitment to quality, schedule, and budget - with a \$3 billion investment and the company's fate palpably in the balance - is as encouraging a tale as has emerged from American business in years. The unprecedented triumph and Chrysler's resultant comeback is a lesson in successful management that will be savored by any reader interested in how great companies make breakthrough products. [The Technological System](#) Springer
The book titled *The Collaborative Economy*

in Action: European Perspectives is one of the important outcomes of the COST Action CA16121, From Sharing to Caring: Examining the Socio-Technical Aspects of the Collaborative Economy (short name: Sharing and Caring; sharingandcaring.eu) that was active between March 2017 and September 2021. The Action was funded by the European Cooperation in Science and Technology - COST (www.cost.eu/actions/CA16121). The main objective of the COST Action Sharing and Caring is the development of a European network of researchers and practitioners interested in investigating the collaborative economy models, platforms, and their socio-technological implications. The network involves scholars, practitioners, communities, and policymakers. The COST Action Sharing and Caring helped to connect research initiatives across Europe and enabled scientists to develop their ideas by collaborating with peers. This collaboration opportunity represented a boost for the participants' research, careers, and innovation potential. The main aim of this book is to provide a comprehensive overview of the collaborative economy

(CE) in European countries with a variety of its aspects for a deeper understanding of the phenomenon as a whole. For this reason, in July 2017, an open call for country reports was distributed among the members of the COST Action Sharing and Caring. Representatives of the member countries were invited to produce short country reports covering: definition(s) of the CE; types and models of the CE; key stakeholders involved; as well as legislation and technological tools relevant for the CE. Submitted reports varied in length and regarding the level of detail included, in accordance with how much information was available in each respective country at the time of writing. Editors of the book have compiled these early reports into a summary report, which was intended as a first step in mapping the state of the CE in Europe. The Member Countries Report on the Collaborative Economy, edited by Gaia Mosconi, Agnieszka Lukaszewicz, and Gabriela Avram (2018) that was published on the Sharing and Caring website, represented its first synergetic outcome and provided an overview of the CE phenomenon as interpreted and manifested in each of the

countries part of the network. Additionally, Sergio Nassare-Aznar, Kosjenka Dumančić, and Giulia Piora compiled a Preliminary Legal Analysis of Country Reports on Cases of Collaborative Economy (2018). In 2018, after undertaking an analysis of the previous reports' strengths and weaknesses, the book editors issued a call for an updated version of these country reports. Prof. Ann Light advised the editorial team, proposing a new format for country reports and 4000 words limit. The template included: Introduction, Definition, Key Questions, Examples, Illustration, Context, Developments, Issues, Other Major Players, and Relevant Literature. The new template was approved by the Management Committee in October 2018. The task force that had supported the production of the first series of country reports (Dimitar Trajanov, Maria del Mar Alonso, Bálint Balázs, Kosjenka Dumančić, and Gabriela Avram) acted as mentors for the team of authors in each country. The final reports arrived at the end of 2018, bringing the total number of submissions to 30 (twenty-nine European countries plus Georgia). A call for book editors was issued, and a new editorial team was

formed by volunteers from the participants of the COST Action: Andrzej Klimczuk, Vida Česnuityte, Cristina Miguel, Santa Mijalche, Gabriela Avram, Bori Simonovits, Bálint Balázs, Kostas Stefanidis, and Rafael Laurenti. The editorial team organized the double-blind reviews of reports and communicated to the authors the requirements for improving their texts. After reviews, the authors submitted updated versions of their country reports providing up-to-date interdisciplinary analysis on the state of the CE in 2019, when the reports were collected. During the final phase, the chapters were again reviewed by the lead editors together with all editorial team members. At the time, the intention was to update these reports again just before the end of the COST Action Sharing and Caring in 2021 and to produce a third edition. However, the COVID-19 pandemic changed these plans. Thus, this final volume was created by 82 scholars-editors and contributors-and consists of reports on 27 countries participating in the COST Action. [Transformation of Cities in Central and Eastern Europe](#) Springer Nature Topics include ethics, aesthetics, politics,

messianism, Judaism and women, and Jewish-Christian relations, as well as the work of Spinoza, Hegel, Heidegger, Franz Rosenzweig, Simone Weil, and Jules Issac. **Whitaker's Books in Print** UNESCO Publishing Countries covered in the empirical case studies are Russia, Estonia, Poland, the Czech and Slovak republics, the former East Germany, Hungary, and Bulgaria. *Contested Waterscapes in the Mekong Region* United Nations University Press Some 20 years after writing *The Technological Society*, Jacques Ellul realized how the totalistic dimensions of our modern technological milieu required an additional treatment of the topic. Writing amidst the rise of books in the 1970s on pollution, over-population, and environmental degradation, Ellul found it necessary, once again, to write about the global presence of technology and its far-reaching effects. *The Technological System* represents a new stage in Ellul's research. Previously he studied technological society as such; in this book he approaches the topic from a systems perspective wherein he identifies the characteristics of technological

phenomena and technological progress in light of system theory. This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world. Ellul's analysis touches on all aspects of modern life, not just those of a scientific or technological order. In the end, readers are compelled to formulate their own opinions and make their own decisions regarding the way a technique-based value system affects every level of human life.

In and Out of Suriname DEStech Publications, Inc

This title will be available online in its entirety in Open Access *In and Out of Suriname: Language, Mobility and Identity* offers a fresh multidisciplinary approach to multilingual Surinamese society, that breaks through the notion of bounded ethnicity enshrined in historical and ethnographic literature on Suriname. [The Mitterrand Era](#) Springer Science & Business Media

"Using the example of the aircraft industry, which takes him like an arrow to the heart of many of the key conflicts in French life between 1936 and 1948,

Herrick Chapman has written a penetrating and exceptionally well documented account of the way that France developed her present style of industrial relations, in which the state plays such a central role. No book I know so successfully integrates the history of aviation . . . with the political and social history of France. Both thorough and thoughtful, it is an impressive achievement."--Robert Wohl, University of California, Los Angeles "An unusual, innovative book based on impressive research that throws new light in a major way on twentieth-century French politics and society . . . one of the most interesting and original monographs in modern French history in a long time."--Robert O. Paxton, Columbia University "This is a breakthrough of considerable importance. [Chapman] will become the leading North American, perhaps even English-speaking, historian of contemporary France."--George Ross, Brandeis University
Democratic Reform and the Position of Women in Transitional Economies Haynes Manuals
 Bringing together a team of international scholars with an interest in urban

transformations, spatial justice and territoriality, this volume questions how the interstice is related to the emerging processes of partitioning, enclave-making and zoning, showing how in-between spaces are intimately related to larger flows, networks, territories and boundaries. Illustrated with a range of case studies from places such as the US, Quebec, the UK, Italy, Gaza, Iraq, India, and South-east Asia, the volume analyses the place and function of interstitial locales in both a 'disciplined' urban space and a disordered space conceptualized through the notions of 'excess', 'danger' and 'threat'. Warning not to romanticize the interstice, the book invites us to study it as not simply a place but also a set of phenomena, events and social interactions. How are interstices perceived and represented? What is the politics of visibility that is applied to them? How to capture their peculiar rhythms, speeds and affects? On the one hand, interstices open up venues for informality, improvisation, challenge, and bricolage, playful as well as angry statements on the neoliberal city and enhanced urban inequalities. On the other hand, they also

represent a crucial site of governance (even governance by withdrawal) and urban management, where an array of techniques ranging from military urbanism to new forms of value extraction are experimented. At the point of convergence of all these tensions, interstices appear as veritable sites of transformation, where social forces clash and mesh prefiguring our urban future. The book interrogates these territories, proposing new ways to explore the dynamics, events and visibilities that define them.

Difficult Freedom Ashgate Publishing, Ltd.

"He who stops getting better has stopped being good." Hans Schneider, General Manager of the Siemens Amberg Electronics Factory, Industrial Excellence Award overall winner 2007 There is a general perception that inflexible labor markets and high labor costs are contributing to a massive displacement of manufacturing jobs and investment from Western Europe to Eastern Europe and Asia. The debate in Western Europe is highly charged, but sometimes ill-informed. It is true that some low-skilled jobs are moving into low labor cost

countries. On the other hand, many more highly skilled jobs are actually being created in the highly developed countries. The total impact on Western economies is much more complicated, and there is some evidence of important benefits. In this book, we showcase examples of excellent industrial management that has managed to create substantial job growth in manufacturing. This book is based on 14 years' observation of the Industrial Excellence Award (IEA) in Germany and France, the first ten years of which we summarized in our previous book, *Industrial Excellence* (Springer 2003), and on an additional five years of observation between 2002 and 2007. We have seen that management's first and noble responsibility to society is to achieve competitiveness. Competitive organizations create growth and jobs, even in Western Europe. Competitiveness requires clearly articulated strategic positioning, together with excellent execution, and mobilization of all employees to apply their abilities and to pull in one direction.

Univ of California Press

This volume presents the current state of knowledge on the osseous projectile weaponry that was produced by Pleistocene cultures across the globe. Through cross-cultural and temporal comparison of manufacturing methods, design, use methods, and associated technology, chapters in this volume identify and discuss differences and similarities between these Pleistocene cultures. The central research questions addressed in this volume include: (a) how did osseous weaponry technology develop and change through time and can these changes be tied to environmental and/or social influences?; (b) how did different Pleistocene cultures design and adapt their osseous weaponry technology to their environment as well as changes in that environment?; and (c) can we identify cultural interaction between neighboring groups through the analysis of osseous weapons technology — and if so — can we use these items to track the movement of

peoples and/or ideas across the landscape? Through addressing these three central research questions, this volume creates an integrated understanding of osseous technology during a vital period in Modern Human cultural development which will be useful for students and advanced researchers alike.
