Organizing Transnational Accountability
Oxford University Press, USA

In a market environment where economic actors conduct themselves as diligent and conscientious managers, the regulation of related party transactions (RPTs) would be largely irrelevant. Unfortunately, the corporate reality is far from an ideal world that is innocent of market abuse and

corporate fraud. It remains necessary to protect minority shareholders from the wrongdoings of majority shareholders and to protect all shareholders from opportunistic managerial behaviour. This timely book – the first on the subject since implementation of the European Union’s (EU’s) revised Shareholders’ Rights Directive – provides in-depth analysis of how and to what extent RPTs are covered by existing legal requirements on capital protection and corporate group regulation, highlighting experiences and strategies

adopted in Germany, Poland, and the Netherlands as examples for Eastern European countries and in particular Ukraine. Beyond his comparative analysis of the current status, the author offers recommendations for more effective handling of RPTs, investigating such aspects as the following: what constitutes a corporate group and how group issues are regulated in the various legal systems; what constitutes a conflict of interest originating in ownership and control and what types of such conflicts occur;

whether RPTs within corporate groups should receive special treatment relative to transactions outside groups; combatting corporate raiding, most often carried out through illegal seizure of corporate assets; approval and disclosure requirements for RPTs; and how information about RPTs is disclosed publicly. Drawing on resources including legislation, case law, scholarship, and intensive discussions with practicing lawyers from several jurisdictions, the author underscores the imperative of establishing limitations and requirements that oblige a company's officers, shareholders, and other potential related parties to follow certain rules whenever they wish to enter into an RPT. As a contribution to the debate about the convergence between EU corporate law and that of major eastern European states, the book has no peers. Practitioners in both East and West who advise on compliance with regulations for RPTs or represent stakeholders' interests against abusive RPTs will ensure appropriate remedies and protection mechanisms for their clients.

This Technical Note discusses the findings and recommendations of the Financial Sector Assessment Program for the Netherlands regarding auditor oversight, collective investment fund management, and regulatory issues. The legal regime and the day-to-day supervision activities conducted by the Netherlands Authority for the Financial Markets and the Dutch central bank are extensive and consistent with international expectations. The approach to the supervision of the small but growing crowd-funding sector strikes a fair balance between enhancing innovation and protecting investors. The Dutch regime for audits and auditor oversight also complies with the expectations of the International Organization of Securities Commissions and appears to work well in practice.

Information--regular, systematic, reliable-- is the life-blood of democracy and the fuel of effective management. Surely today there is no problem with information, for this is the age of information overload. It pours onto our computer screens and out of our printers. Indeed, many governments claim, often with some justification, to be more open and transparent than ever before. But what if the life-blood is contaminated, or the fuel polluted? Then the body politic sickens and the engine of public management runs rough. It is the vital issue of the quality of the information we receive that this book addresses. Quality Matters compares approaches across different jurisdictional settings and across three different types of information evaluation. The chapters describe and analyze quality assurance in a number of countries and within a variety of international organizations. These have been selected either because they are widely considered to be leaders in evaluating information or because they have experience with assuring quality information that can instruct others. Contributors are from Australia, Canada,

the European Union, France, the Netherlands, New Zealand, Sweden, Switzerland, United Kingdom, United States, and the World Bank. This pioneering study analyzes practices for assuring the quality of evaluation, performance auditing, and reporting in the face of political, organizational, and technical obstacles. A final chapter addresses the extent to which quality assurance systems become bothersome rituals or remain meaningful mechanisms to ensure quality control. This well-structured volume will be of particular interest to policymakers and adds much to the literature on program evaluation and performance auditing.

When Eastern Europe Meets the West John Wiley & Sons

Based on a study covering a one-year financial reporting cycle at a commercial subsidiary of a well-known scientific research organization, *Inside Accounting* examines how accountants and non-accounting managers construct their company's earnings. Addressing issues in both internal management accounting, such as budgeting, performance evaluation, and control, as well as external

financial accounting, such as book keeping, monthly/year end accounts and auditing, David Leung focuses on how people classify transactions, make professional judgments and use computer software for accounting, and prepare for and facilitate the auditing process. He also looks at accountancy training and the impact of people's affiliations to the accounting profession or other professions on their accounting and on their perceptions of financial statements. Other contingent or contextual factors that influence the choice of accounting method, such as time pressure, reward structures, management authority and institutions are also considered. David Leung's research employs an innovative blend of theory and practice that redresses the imbalance between ethnographic studies of financial accounting, and management accounting and helps close the gap between the academic curriculum and the experiences of practitioners. His research leads the author to conclude that no act of accounting classification is ever indefeasibly correct; that the accounting community's institutions and authority are

central to the accounting process and to the 'truth and fairness' of accounting numbers; that accounting training involves extensive use of learning by doing; and that both accountants and non-accounting managers have goals and interests that often result in no better than 'good enough' accounting. This book will appeal to accounting and finance professionals and academics in finance, as well as to sociologists and academic researchers interested in research methods and science studies.

Given the significant changes in the banking environment and the resultant pressures on banks to change their systems and procedures, this book is a timely reference that provides a comprehensive analytical overview of changes in the performance measurement system (PMS) of banks in the post-financial crisis era. It explores the factors that influence such changes and examines

banks' consequential responses to institutional pressures. It is an invaluable resource for researchers and practitioners to gain insights into the concept of PMS change in both developed and developing economies.

Performance Measurement Systems in Banks Macmillan International Higher Education

This book analyses EU food law from a regulatory, economic and managerial perspective. It presents an economic assessment of strategies of food safety regulation, and discusses the different regulatory regimes in EU food law. It examines the challenges of food safety in the internal market as well as the regulatory tools that are available. The

book's generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets, such as health claims, enforcement strategies, and induced risk management at the level of the organizations producing food. The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex-ante versus ex-post regulation and content-related versus information-related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena, and that economic effects consolidate or induce modification of the present legal structures and principles. The assessments, analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains.

Quality Matters Routledge

The reputation of corporate reporting has been in crisis. Trust in the process of financial accounting and auditing has been undermined by a series of high profile scandals involving major corporations, including Enron, Parmalat, Ahold, and Worldcom. In response, regulators and

practitioners world-wide have put forward a series of initiatives to repair the damage and restore faith in corporate governance. In this important book, the European Auditing Research Network analyzes how that response has developed in Europe, with particular emphasis on the field of auditing. Leading international academics review how regulation has been revised in specific European countries to help restore confidence in the contribution of auditing to corporate governance. Various themes are explored, including the growing trend of internationalization in regulation, ethics and auditing, professional liability, and professional education. *Auditing, Trust and Governance* is an invaluable volume for students, researchers and professionals working in the fields of auditing, accountancy and corporate governance, and provides a useful basis for further research on the effects of the increased regulation.

Regulating and Managing Food Safety in the EU International Monetary Fund
Audit professionals are valued members of society and are expected to be both skilled and ethical in their decision-making. The role of the auditor extends far beyond that

of counting beans by demanding a social and political awareness, a technical knowledge, ethical principles and relationship skills. In addition, due to the team-oriented nature of the audit approach, auditors require strong team-building and interpersonal skills. This book offers expert descriptions of, and insights into, how such skills and responsibilities can be inculcated in tertiary education and professional training environments. Unlike other books which focus on auditing as a technical process, this volume examines auditing from a teaching and learning perspective. Expert contributors provide authoritative insights into an audit education which is embedded in accounting practice. The book's descriptions of these insights into improving education for future audit professionals may allow the introduction of new and challenging fields of enquiry. *Audit Education* will be of great interest to educators in tertiary institutions, trainers in professional firms, and key individuals in accounting professional bodies seeking to ensure their members possess acceptable levels of attainment for admission and continued membership.

This book was originally published as a special issue of *Accounting Education: an international journal*.

In the expanding academic literature on accountability, there remains significant ambiguity about the scope and content of this concept. Boström and Garsten have performed an invaluable service to scholars by providing a fresh focus on how accountability is actually organized in practice. Their intelligently edited collection pulls together a range of disciplinary perspectives on the new organizational settings and instruments engaged with accountability norms. This volume is an excellent contribution both to organizational theory and wider research on transnational governance. Michael Mason, London School of Economics and Political Science, UK This book adds a multi-disciplinary organizational perspective to the theoretical analysis of political accountability and argues for a broadening of the conventional understanding of the concepts of responsibility and accountability. There is increasing pressure for accountability, driven by such factors as the globalization

of markets, media reports of corporate misconduct, environmental destruction and the violation of human rights. In response, this book focuses on the development of accountability tools and techniques as well as on the organizational arrangements and political struggles behind such endeavours. This unique study theorizes the emerging accountability and corporate social responsibility movement at the transnational level. It focuses on an increasingly recognized aspect of transnational organizational life, which is often mentioned in recent literature, yet sparsely analysed. Organizing Transnational Accountability will be an important and invaluable read for researchers, policymakers and students of social anthropology, sociology, organization theory, political science and critical accounting at graduate levels and above.

Benchmarking Working Europe 2015 Juta and Company Ltd

Published every year, the report analyses the state of working Europe explaining with the aid of statistics and graphs the main trends in terms of Europe's macro-

economic situation, its labour market development, the situation of wages and collective bargaining, and worker participation. The focus of this year's Benchmarking report is on the lessons learned – or not learned – from eight years of economic crisis and austerity policy. The findings point to policy failures and to the need to redefine alternatives in order to get Europe back on a sustainable growth path. The deterioration of the labour market and social situation in the EU, along with the appointment of a new Commission last autumn, have led to some renewed policy initiatives that seek to restore growth as a means of addressing the situation. The most notable of these initiatives is the Annual Growth Survey with its three pillars: the Investment Plan, fiscal responsibility and structural reforms.
