Becoming an automated software testing expert first requires knowledge and understanding of an organizations development methodology, tools, schedules, and resources. Within this context, an overall strategy for implementing automated testing can unfold. Development of automated tests needs to be coordinated alongside other test activity and become part of the overall testing strategy. To successfully build and maintain a suite of automated tests requires the adoption of a process similar to application software development. In the world of automated tests, a framework describes those reusable components which form the basis of an automated testing program. An automated testing expert will assess the requirements of an organization, navigate the challenges posed by people and technology, and recommend, plan, implement, and maintain a process that maximizes the participation of all testers in creating automated scripts and analyzing run results. Expert automators should have broad knowledge of technical environments, hands-on experience with a variety of automated testing tools, and a technical background to ensure customization can be achieved.

The book expands and details many issues that are described in the new 2023 version of the syllabus in a perfunctory or general way only. According to the ISTQB® guidelines for syllabus-based training, an exercise must be provided for each learning objective at the K3 level, and a practical example must be provided for each objective at the K2 or K3 level. In order to satisfy these requirements, the authors prepared numerous exercises and examples for all learning objectives at these levels. In addition, for each learning objective, one or more sample exam questions are presented which are similar to those that the candidate will see in the exam. This makes the book an excellent aid for studying and preparing for the exam and verifying acquired knowledge.
