Wong's Essentials of Pediatric Nursing
Policy Press

The concept of 'person-centredness' has become established in approaches to the delivery of healthcare, particularly with nursing, and is embedded in many international healthcare policy frameworks and strategic plans. This book explores person-centred nursing using a framework that has been derived from research and practice. Person-centred Nursing is a theoretically rigorous and practically applied text that aims to increase nurses' understanding of the principles and practices of person-centred nursing in a multiprofessional context. It advances new understandings of person-centred nursing concepts and theories through the

presentation of an inductively derived and tested framework for person-centred nursing. In addition it explores a variety of strategies for developing person-centred nursing and presents case examples of the concept in action. This is a practical resource for all nurses who want to develop person-centred ways of working. *B is for Balance : 12 Steps Toward a More Balanced Life at Home and at Work* F A Davis Company
Provides a practical approach to leadership and management principles specific to clinical settings Coverage includes clinical decision-making, technology to improve patient outcomes, and leadership and management practice in inter-professional healthcare delivery Multiple case studies This textbook is intended for students preparing as advanced practice nurses, doctoral physical therapists, doctoral pharmacists,

and other advanced practice professionals. The book provides practical approaches to the application of leadership and management principles while systematically presenting the content needed for skilled leadership in varied clinical settings. Chapters are devoted to leadership change, understanding health organizations and systems, technology to improve population-based care, using critical thinking principles to improve patient outcomes, clinical decision-making using evidence-based practice, and inter-professional healthcare delivery. Telehealth and the impacts of the Affordable Care Act are also discussed. A case study is presented at the beginning of each chapter and incorporated into the theoretical material as a continuing illustration.

This open access volume is the first

academic book on the controversial issue of including spiritual care in integrated electronic medical records (EMR). Based on an international study group comprising researchers from Europe (The Netherlands, Belgium and Switzerland), the United States, Canada, and Australia, this edited collection provides an overview of different charting practices and experiences in various countries and healthcare contexts. Encompassing case studies and analyses of theological, ethical, legal, healthcare policy, and practical issues, the volume is a groundbreaking reference for future discussion, research, and strategic planning for inter- or multi-faith healthcare chaplains and other spiritual care providers involved in the new field of documenting spiritual care in EMR. Topics explored among the chapters include:

Spiritual Care

Charting/Documenting/Recording/Assessment Charting Spiritual Care: Psychiatric and Psychotherapeutic Aspects Palliative Chaplain Spiritual Assessment Progress Notes Charting Spiritual Care: Ethical Perspectives Charting Spiritual Care in Digital Health: Analyses and Perspectives Charting Spiritual Care: The Emerging Role of Chaplaincy Records in Global Health Care is an essential resource for researchers in interprofessional spiritual care and healthcare chaplaincy, healthcare chaplains and other spiritual caregivers (nurses, physicians, psychologists, etc.), practical theologians and health ethicists, and church and denominational representatives.

Essentials of Nursing Leadership and Management Springer Nature

Nursing, like other health-related professions, is information-intensive. The quality of care a patient receives is based on the soundness of judgment exercised by the health care team. Underlying sound judgment is up-to-date information. Unless nurses have access to accurate and pertinent information, the care being rendered will not be of the highest standard. What is required is not necessarily more rapid and efficient information services. Modern technology can process immense amounts of data in the blink of an eye. What we in the health professions need are information systems that are more intelligent, systems that can integrate information from many sources, systems that analyze and synthesize information and display it so that it may be applied directly in patient care—in other words, information that answers a question or even gives practical advice. In order to accomplish such objectives, work is needed to establish the scientific and theoretical basis for the use of computing and information systems by health professionals. This is the research component. In addition, there is the need for continued development and evaluation of practical information systems.

Knowledge Translation in Health Care Springer

This book analyses how the current regulatory processes and practices related to key aspects of the management of the health professions may facilitate or inhibit the development of effective responses to challenges facing health care systems in Europe. The authors document how health care systems in Europe are confronting existing challenges in relation to the health workforce and identify the strategies that are likely to be most effective in optimizing the management of health professionals in the future.

Charting Spiritual Care Routledge

This comprehensive management manual brings together a holistic philosophy of health care, an overview of good business practices, and guidelines for compliance to national and international hospital accreditation standards. Chapters cover conceptual frameworks for health service delivery, strategic planning, good

governance, financial management, human resource management, and continuous quality improvement. The philosophy of Ubuntu, the African notion that everyone in a community is responsible for the welfare of its members, is also discussed as a necessary consideration in all health care decisions.

Research has shown that a range of adult psychiatric disorders and mental health problems originate at an early age, yet the psychiatric symptoms of an increasing number of children and adolescents are going unrecognized and untreated—there are simply not enough child psychiatric providers to meet this steadily rising demand. It is vital that advanced practice registered nurses (APRNs) and primary care practitioners take active roles in assessing behavioral health presentations and work collaboratively with families and other healthcare professionals to ensure that all children and adolescents receive appropriate treatment. *Child and Adolescent Behavioral Health* helps APRNs address the mental health needs of this vulnerable population, providing practical guidance on assessment guidelines, intervention and treatment strategies, indications for consultation, collaboration, referral, and more. Now in its second edition, this comprehensive and timely resource has been fully updated to include DSM-5 criteria and the latest guidance on assessing, diagnosing, and treating the most common behavioral health issues facing young people. New and expanded chapters cover topics including eating disorders, bullying and victimization, LGBTQ identity issues, and conducting research with high-risk children and adolescents. Edited and written by a team of accomplished child psychiatric and primary care practitioners, this authoritative volume: Provides state-of-the-art knowledge about specific psychiatric and behavioral health issues in multiple care settings Reviews the clinical manifestation and etiology of behavioral disorders, risk and management issues, and implications for practice, research, and education Offers approaches for interviewing children and adolescents, and strategies for integrating physical and psychiatric screening Discusses special topics such as legal and ethical issues, cultural influences, the needs of immigrant children, and child and adolescent mental health policy Features a new companion website containing clinical case studies to apply concepts from the chapters Designed to specifically address the issues faced by APRNs, *Child and Adolescent*

Since its first publication in 1996, Marie Muller's *Nursing Dynamics* has become firmly established as an essential resource for nursing courses. This new edition addresses the latest challenges faced by nursing professionals and expands the focus to include all managers in healthcare service management. Nursing and midwifery educators who relied on earlier editions of this work will find that their discipline is still the core of this book, with the management aspects broadened to include general healthcare dynamics. Subjects range from professional regulation to governance, decision making, financial management, quality management and continuing professional development. A new feature of the book is the introduction of digital elements including QR codes, online student-lecturer support material and a digital portfolio of evidence. The practical application of principles has been formalised with the inclusion of case studies and assignments at the end of each chapter. These exercises follow a Head-Heart-Hands model, covering the knowledge behind the principle, the ethical and "duty of care" considerations, and the hands-on application -- page 4 of cover.

A Person-Centred Evidence-Based Approach SAGE

Improving our nation's healthcare system is a challenge which, because of its scale and complexity, requires a creative approach and input from many different fields of expertise. Lessons from engineering have the potential to improve both the efficiency and quality of healthcare delivery. The fundamental notion of a high-performing healthcare system--one that increasingly is more effective, more efficient, safer, and higher quality--is rooted in continuous improvement principles that medicine shares with engineering. As part of its Learning Health System series of workshops, the Institute of Medicine's Roundtable on Value and Science-Driven Health Care and the National Academy of Engineering, hosted a workshop on lessons from systems and operations engineering that could be applied to health care. Building on previous work

done in this area the workshop convened leading engineering practitioners, health professionals, and scholars to explore how the field might learn from and apply systems engineering principles in the design of a learning healthcare system. *Engineering a Learning Healthcare System: A Look at the Future: Workshop Summary* focuses on current major healthcare system challenges and what the field of engineering has to offer in the redesign of the system toward a learning healthcare system.

Child and Adolescent Behavioral Health MDPI

With a strong focus on health and wellness, this gerontological nursing text offers you a holistic perspective to caring for older adults. Designed to facilitate the healthiest adaptation possible, this text identifies potential problems that may occur and the means to address complications, alleviate discomfort, and help older adults lead healthy lives. Disease processes are discussed in the context of healthy adaptation, nursing support, and nursing responsibilities to help you gain an understanding of your clients' experience. Focus on health and wellness establishes a positive perspective to aging. Careful attention to age, cultural, and gender differences are integrated throughout to help you understand these important considerations when caring for older adults. Healthy aging strategies maximize the healthiest behaviors of clients with dementia and their caregivers. Consistent chapter organization includes learning objectives, research, and study questions/activities to make information easy to find and use. Incorporates assessment guidelines throughout provide useful tools for practice. End-of-chapter activities and discussion questions help you expand your knowledge and understanding of the content. Resource lists provide you with additional means to explore ways to care for the older adult. Incorporates the core competencies identified by the AACN and the Hartford Foundation Institute for Geriatric Nursing. Healthy People 2010 boxes assist you in integrating knowledge about healthy aging considerations. Evidence-Based Practice boxes summarize research findings that confirm effective practices or identify practices with unknown, ineffective, or harmful effects. Expanded sexuality-related content includes older adults living with AIDS and STDs. Genetics section reflects the emergence of the role of genetics in gerontological assessment. PROMOTING PARTNERSHIP FOR HEALTH

This book forms part of a series entitled Promoting Partnership for Health published in association with the UK Centre for the Advancement of Interprofessional Education (CAIPE). The series explores partnership for health from policy, practice and educational perspectives. Whilst strongly advocating the imperative driving collaboration in healthcare, it adopts a pragmatic approach. Far from accepting established ideas and approaches, the series alerts readers to the pitfalls and ways to avoid them. DESCRIPTION Interprofessional Teamwork for Health and Social Care is an invaluable guide for clinicians, academics, managers and policymakers who need to understand, implement and evaluate interprofessional teamwork. It will give them a fuller understanding of how teams function, of the issues relating to the evaluation of teamwork, and of approaches to creating and implementing interventions (e.g. team training, quality improvement initiatives) within health and social care settings. It will also raise awareness of the wide range of theories that can inform interprofessional teamwork. The book is divided into nine chapters. The first 'sets the scene' by outlining some common issues which underpin interprofessional teamwork, while the second discusses current teamwork developments around the globe. Chapter 3 explores a range of team concepts, and Chapter 4 offers a new framework for understanding interprofessional teamwork. The next three chapters discuss how a range of range of social science theories, interventions and evaluation approaches can be employed to advance this field. Chapter 8 presents a synthesis of research into teams the authors have undertaken in Canada, South Africa and the UK, while the final chapter draws together key threads and offers ideas for future of teamwork. The book also provides a range of resources for designing, implementing and evaluating interprofessional teamwork activities.

European Psychiatric/Mental Health Nursing in the 21st Century John Wiley & Sons

This book is about the ethics of nursing and midwifery, and how these were abrogated during the Nazi era. Nurses and midwives actively killed their patients, many of whom were disabled children and infants and patients with mental (and other) illnesses or intellectual disabilities. The book gives the facts as well as theoretical perspectives as a lens through which these crimes can be viewed. It also provides a way to teach this history to nursing and midwifery students, and, for

the first time, explains the role of one of the world's most historically prominent midwifery leaders in the Nazi crimes. [Theory and Practice](#) F A Davis Company Three-time recipient of the AJN Book of the Year Award! Praise for the third edition: "This is an outstanding edition of this book. It has great relevance for learning about, developing, and using middle range theories. It is very user friendly, yet scholarly." Score: 90, 4 Stars -Doody's Medical Reviews The fourth edition of this invaluable publication on middle range theory in nursing reflects the most current theoretical advances in the field. With two additional chapters, new content incorporates exemplars that bridge middle range theory to advanced nursing practice and research. Additional content for DNP and PhD programs includes two new theories: Bureaucratic Caring and Self-Care of Chronic Illness. This user-friendly text stresses how theory informs practice and research in the everyday world of nursing. Divided into four sections, content sets the stage for understanding middle range theory by elaborating on disciplinary perspectives, an organizing framework, and evaluation of the theory. Middle Range Theory for Nursing, Fourth Edition presents a broad spectrum of 13 middle range theories. Each theory is broken down into its purpose, development, and conceptual underpinnings, and includes a model demonstrating the relationships among the concepts, and the use of the theory in research and practice. In addition, concept building for research through the lens of middle range theory is presented as a rigorous 10-phase process that moves from a practice story to a conceptual foundation. Exemplars are presented clarifying both the concept building process and the use of conceptual structures in research design. This new edition remains an essential text for advanced practice, theory, and research courses. New to the Fourth Edition: Reflects new theoretical advances Two completely new chapters New content for DNP and PhD programs Two new theories: Bureaucratic Caring and Self-Care of Chronic Illness Two articles from *Advances in Nursing Science* documenting a historical meta-perspective on middle range theory development Key Features: Provides a strong contextual foundation for understanding middle range theory Introduces the Ladder of Abstraction to clarify the range of nursing's theoretical foundation Presents 13 middle range theories with philosophical, conceptual, and empirical dimensions of each theory Includes Appendix summarizing middle range theories from 1988 to 2016

This edited volume brings together critical research on climate change adaptation discourses, policies, and practices from a multi-disciplinary perspective. Drawing on examples from countries including Colombia, Mexico, Canada, Germany, Russia, Tanzania, Indonesia, and the Pacific Islands, the chapters describe how adaptation measures are interpreted, transformed, and implemented at grassroots level and how these measures

are changing or interfering with power relations, legal pluralism and local (ecological) knowledge. As a whole, the book challenges established perspectives of climate change adaptation by taking into account issues of cultural diversity, environmental justice and human rights, as well as feminist or intersectional approaches. This innovative approach allows for analyses of the new configurations of knowledge and power that are evolving in the name of climate change adaptation. This volume will be of great interest to students and scholars of climate change, environmental law and policy, and environmental sociology, and to policymakers and practitioners working in the field of climate change adaptation.
