MCQs - SanfoundryA
digital signal is a signal
that is constructed
from a discrete set of
waveforms of a
physical quantity so as
to represent a
sequence of discrete
values. A logic signal is
a digital signal with
only two possible
values, and describes
an arbitrary bit
stream.Other types of
digital signals can
represent three-valued
logic or higher valued
logics. ...Signal -
Wikipedia6.003 covers
the fundamentals of
signal and system
analysis, focusing on
representations of
discrete-time and
continuous-time
signals (singularity
functions, complex
exponentials and

geometrics, Fourier representations, Laplace and Z transforms, sampling) and representations of linear, time-invariant systems (difference and differential equations, block diagrams, system functions, poles and ...Signals and Systems | Electrical Engineering and Computer ...Topics include basic signals and systems concepts, linear time-invariant (LTI) systems, Fourier representations of continuous-time and discrete-time signals, the CT and DT Fourier transforms, and time- and frequency-domain analysis methods. Signals and Systems: Oppenheim, Alan, Willsky, Alan, Hamid ...X Exclude words from your search Put - in front of a word you want to

leave out. For example, jaguar speed -car Search for an exact match Put a word or phrase inside quotes. Readings | Signals and Systems | Electrical Engineering ...Statement: A continuous time signal can be represented in its samples and can be recovered back when sampling frequency f_s is greater than or equal to the twice the highest frequency component of message signal. i. e. $f_s \geq 2 f_m$. Proof: Consider a continuous time signal $x(t)$. The spectrum of $x(t)$ is a band limited to f_m Hz i.e. the spectrum of $x(t)$ is zero for $|\omega| > \omega_m$.
