To ensure that the path required for the passage of trains is kept clear along the route of a railway, a " structure gauge " is imposed. This has the effect of forming a limit of building inside which no structures may intrude. Structure Gauge and Kinematic Envelope The Vehicle/Structure System Interface Committee (V/S SIC) recognised that whilst many in the industry have some knowledge about gauging, there is insufficient breadth and depth for its needs. This is manifest in regular requests to a limited number of industry experts to advise on allowing the passage of traffic on a particular gauge when the rules of the gauge may not have been fully understood.
