Although scholars in the disciplines of law, psychology, philosophy, and sociology have published a considerable number of prescriptive, normative, and theoretical studies of animals in society, *Pet Politics* presents the first study of the development of companion animal or pet law and policy in Canada and the United States by political scientists. The authors examine how people and governments classify three species of pets or companion animals—cats, dogs, and horses—for various degrees of legal protection. They then detail how interest groups shape the agenda for companion animal legislation and regulation, and the legislative and administrative formulation of anticruelty, kennel licensing, horse slaughter, feral and roaming cat, and breed ban policies. Finally, they examine the enforcement of these laws and policies by agencies and the courts. Using an eclectic mix of original empirical data, original case studies, and interviews—and relying on general theories and research

about the policy process and the sociopolitical function of legality—the authors illustrate that pet policy is a unique field of political struggle, a conflict that originates from differing perspectives about whether pets are property or autonomous beings, and clashing norms about the care of animals. The result of the political struggle, the authors argue, is difficulty in the enactment of policies and especially in the implementation and enforcement of laws that might improve the welfare of companion animals.

For many of us, the only way we meet "dangerous" dogs is through news reports about vicious attacks, and films and TV shows that feature out-of-control versions of man's best friend. But there's more to the Bad Dog's story than sensational headlines and movie beasts. A deeper look at these representations reveals a villain much closer to home. This book takes the reader on a rich journey through depictions of violent dogs in popular media. It explores how press accounts and screen stories transform canines into bloodthirsty hunters, rabies-infested strays, ferocious fighters, rogue law

enforcement partners and diabolical pets, all adding up to a frightening picture of our usually beloved companions. But, when media tells the dangerous dog's story, it is often with a deep connection to the person on the other end of the leash.

Previous research has indicated that certain breeds of dogs stay longer in shelters than others; however exactly how breed perception and identification influences potential adopters' decisions remains unclear. Current dog breed identification practices in animal shelters are often based upon information supplied by the relinquishing owner, or staff determination based on the dog's phenotype. However discrepancies have been found between breed identification as typically assessed by welfare agencies and the outcome of DNA analysis. In Study 1, the perceived behavioral and adoptability characteristics of a pit-bull-type dog were compared with those of a Labrador Retriever and Border Collie. How the addition of a human handler influenced those perceptions was also assessed. In Study 2, lengths of stay and

perceived attractiveness of dogs that were labeled as pit bull breeds to dogs that were phenotypically similar but were labeled as another breed at an animal shelter were compared. The latter dogs were called "lookalikes." In Study 3, perceived attractiveness in video recordings of pit-bull-type dogs and lookalikes with and without breed labels were compared. Lastly, data from an animal shelter that ceased applying breed labeling on kennels was analyzed, and lengths of stay and outcomes for all dog breeds, including pit bulls, before and after the change in labeling practice were compared. In total, these findings suggest that breed labeling influences potential adopters' perceptions and decision-making. Given the inherent complexity of breed assignment based on morphology coupled with negative breed perceptions, removing breed labels is a relatively low-cost strategy that will likely improve outcomes for dogs in animal shelters.

This new book on PHP 7 introduces writing solid, secure, object-oriented code in the new PHP 7: you will create a complete

three-tier application using a natural process of building and testing modules within each tier. This practical approach teaches you about app development and introduces PHP features when they are actually needed rather than providing you with abstract theory and contrived examples. In *Learn PHP 7*, programming examples take advantage of the newest PHP features, including enhanced password encryption using `password_hash`. This book takes a learn-by-doing approach, providing you with complete coding examples. "Do It" exercises in each chapter provide the opportunity to make adjustments to the example code. The end of chapter programming exercises allow you to develop your own applications using the algorithms demonstrated in the chapter. Each tier is logically and physically separated using object-oriented and dependency injection techniques, thus allowing independent tiers that can be updated with little or no effect on the other tiers. In addition to teaching good programming practices through OOP, there is a strong emphasis on creating secure code. As each chapter is

completed, the reader is provided the opportunity to design and create an application reinforcing the concepts learned.

Pet Politics Cengage Learning

Many insurance companies refuse to insure homeowners who own certain breeds of dog, claiming that some breeds are inherently more dangerous than others. This practice, known as breed discrimination, is without a basis in science. No study has accurately counted or estimated the number of bites per breed, in part because a national reporting system does not exist for dog bites. People are unable to notice the subtle distinctions between breeds, which calls into question the reports that are made. Mixed breed

dogs add further confusion to the problems of identification and collection of dog bite data. Likewise, there is an absence of data on the number of dogs per breed. Without accurate data on the number of bites per breed and the number of dogs per breed, it is scientifically impossible to conclude that one breed is more dangerous than another. Breed discrimination is having a profound effect on American families, who are being forced to choose between home ownership and their pets. Although pets are considered mere property under the law, there is some indication that courts and legislatures have realized what every pet owner already knows: that pets are beloved, four-legged members of many American families. Where, as here, the insurance industry makes underwriting or rate-setting decisions without a rational basis in fact or science, legislatures have the right and the duty to correct the

problem. Breed discrimination violates the public interest and is cause for regulation. *Veterinary Assisting Fundamentals and Applications* Laurel Leaf
