Books, scholarly journals, business information, and professional information play a pivotal role in the political, social, economic, scientific, and intellectual life of nations. While publications abound on Wall Street and financial service companies, the relationship between Wall Street's financial service companies and the publishing and information industries has not been explored until now. The Economics of the Publishing and

Information Industries utilizes substantive historical, business, consumer, economic, sociological, technological, and quantitative and qualitative methodologies to understand the people, trends, strengths, opportunities, and threats the publishing industry and the financial service sector have faced in recent years. Various developments, both economic and demographic, contributed to the circumstances influencing the financial service sector's investment in the publishing and information industries. This volume identifies and analyzes those developments, clearly laying out the forces that drove the marriage between the spheres of publishing and finance. This book offers insight and analysis that will appeal to those across a wide variety of fields and occupations, including those in financial service firms, instructors and students in business, communications, finance, or economics programs, business and financial reporters, regulators, private investors, and academic and major public research libraries.
