DEXA 2004, the 15th International Conference on Database and Expert Systems Applications, was held August 30 ? September 3, 2004, at the University of Zaragoza, Spain. The quickly growing spectrum of database applications has led to the establishment of more specialized discussion platforms (DaWaK Conference, EC-Web Conference, EGOVConference, Trustbus Conference and DEXA Workshop: Every DEXA event has its own conference proceedings), which were held in parallel with the DEXA Conference also in Zaragoza. In your hands are the results of much effort. The work begins with the preparation of the submitted papers, which then go through the reviewing process. The accepted papers are revised to final versions by their authors and are then arranged within the conference program. All culminates in the conference itself. For this conference 304 papers were submitted, and I want to thank to all who contributed to it; they are the real base of the conference. The program committee and the supporting reviewers produced altogether 942 referee reports, in average 3,1 reports per paper, and selected 92 papers for presentation. At this point we would like to say many thanks to all the institutions that actively supported this conference

and made it possible. These were: • University of Zaragoza • FAW • DEXA Association • Austrian Computer Society [Kiplinger's Personal Finance](#) Intellichoice Incorporated

Learn about the entire history of America's best-selling vehicle: the Ford F-Series truck. When Henry Ford first started manufacturing Model Ts more than 100 years ago, he didn't really have any sort of pickup or truck configuration in mind. However, enterprising people and businesses were modifying those early chassis for commercial use, and it didn't take long for Ford to figure out that there was a demand for a truck application of the Model T. Soon, Ford was making its own configurations for commercial use, first through third-party body companies and eventually by Ford itself with the Model TT. From these humble beginnings, Ford stumbled onto the basis for one of the most popular vehicles ever built: the Ford F-Series pickup truck. In *Ford F-Series Trucks: 1948-Present*, authors Jimmy Dinsmore and James Halderman thoroughly dissect the history of Ford F-Series pickup trucks as seen from a technical viewpoint. Fully covered are all the options, chassis specifications, running changes, and the evolution of these trucks, as they transformed from postwar utilitarian vehicles to the best-selling luxury family cruisers seen today. Not only are Ford trucks the best-selling trucks, they are the best-selling vehicle of any category, cars included. This book will thrill truck aficionados and Ford historians alike, as it covers the first F-Series models (1948-1952), the ever-popular second-generation F-Series models (1953-1956), the popular Bumpsides (1967-1972), and all the way through the remarkable technology of what is now the 14th generation of the F-Series.

SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In *High and Mighty*, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of *Unsafe at Any Speed* and *Fast Food Nation*, Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not.
