 This sourcebook contains more than twelve hundred easy-to-follow and implement classroom activities created and tested by veteran teachers from all over the country. The activities are arranged by grade level and are keyed to the revised National History Standards, so they can easily be matched to comparable state history standards. This volume offers teachers a treasury of ideas for bringing history alive in grades 5?12, carrying students far beyond their textbooks on active-learning voyages into the past while still meeting required learning content. It also incorporates the History Thinking Skills from the revised National History Standards as well as annotated lists of general and era-specific resources that will help teachers enrich their classes with CD-ROMs, audio-visual material, primary sources, art and music, and various print materials.  Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in

the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

The Risky Business of Education Policy focuses commentary and analysis on some of the most pressing policy challenges facing public school educators and those invested in a healthy, vibrant public-school system. The book shares insights and makes recommendations from leading scholar-practitioners, namely from educational leadership and science education, on ways to ponder, navigate, and challenge serious policy issues. The chapters present important policy topics and critical analysis of the topics from the authorial perspective of experienced educators leading the preparation of future school leaders and teachers. Through fast paced, user-friendly chapters, contributors grapple with an education reform policy issue of the day, reflecting what is contentious territory while wading through it. These educational researchers also make evidence-informed practical recommendations for educators and policymakers on how to better approach the policy challenges presented, so public education can be improved for all children. Each chapter contains stimulating ideas, useful information, and practical tips for school practitioners, higher education faculty, and constituent groups.

The case study explores which skills and training opportunities young people need in order to gain access to decent employment in rural areas. The research was undertaken in order to develop recommendations to support the Ministry of Agriculture, Forestry and Fisheries (MAFF) and FAO Cambodia in developing appropriate recommendations to support rural young people, especially those of the 15 to 17 age cohort. The study highlights the limited decent employment opportunities that currently exist along various agricultural value chains in rural Cambodia. Poverty and the structural problems of the agricultural sector are the main barriers for youth in accessing decent rural employment. A substantial enhancement of the education system, as well as the provision of appropriate training services to ensure successful school-to-work transition is seen as necessary to tackle these challenges. A well-balanced policy mix reflecting national and local circumstances can encourage employment opportunities and create an environment that enables rural youth. Building on previous research on agriculture in Cambodia, agricultural transformation requires promotion of agribusiness enterprises, support to community-managed organizations of farmers, promotion of agropreneurs, and investments in agricultural and rural development, particularly in infrastructure, energy, water, education and health. Moreover, most youth entering agriculture are self-employed and work as smallscale farmers. Therefore, the provision of skills and training in rural areas should focus on the skills required to be self-employed.

Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary caregivers" are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
