Evidence suggests a  
direct correlation between  
the quality of  
postoperative orthopaedic  
rehabilitation and the  
effectiveness of the  
surgery. Clinical  
Orthopaedic  
Rehabilitation, 4th Edition,  
helps today's orthopaedic

teams apply the most  
effective, evidence-based  
protocols for maximizing  
return to function  
following common sports  
injuries and post-surgical  
conditions. Charles  
Giangarra, MD and Robert  
Manske, PT continue the  
commitment to  
excellence established by  
Dr. S. Brent Brotzman in  
previous editions, bringing

a fresh perspective to the team approach to rehabilitation. Every section is written by a combination of surgeons, physical therapists, and occupational therapists, making this respected text a truly practical "how-to" guide for the appropriate initial exam, differential diagnosis, treatment, and rehabilitation. Treatment and rehabilitation protocols are presented in a step-by-step, algorithmic format with each new phase begun after criteria are met

(criteria-based progression, reflecting current best practice). Revised content brings you up to date with new evidence-based literature on examination techniques, classification systems, differential diagnosis, treatment options, and criteria-based rehabilitation protocols. Extensive updates throughout include new chapters on: medial patellofemoral ligament, shoulder impingement, pec major ruptures, thoracic outlet syndrome, general

humeral fractures, foot and ankle fractures, medial patellofemoral ligament reconstruction, the arthritic hip, athletic pubalgia, and labral repair and reconstruction. *Thomas Register* Elsevier Health Sciences
