Deployable Emergency System. Arquitecturas Desechables de Emergencia John Wiley & Sons

The United States Marine Corps was one of the phenomena of the Second World War. Greatly expanded from its prewar order of battle of scattered defense battalions, overseas garrisons and ship detachments, it became a multi-division force bearing the brunt of the hardest fighting across the whole vast expanse of the Pacific theater of operations. In August 1942 Marines were among the first to strike back at the Japanese in the jungles of Guadalcanal; Marine Raider battalions were formed to carry the fight to the enemy; and from the Central Solomon's landings of mid-1943 it was the Marines who spearheaded the 'island hopping' amphibious campaign which brought them to Okinawa, on Japan's doorstep, by VJ-Day. This epic story has been well documented in most respects except one: the uniforms, insignia and personal equipment of the Marines who fought their way across the Pacific. Authoritative, illustrated reference works of

this important aspect of World War II's physical history have been notoriously lacking. In this book, longtime collector and researcher Jim Moran fills the gap, with a systematic, detailed guide illustrated with more than 300 photographs, including some 200 close-ups of surviving items in private collections on both sides of the Atlantic. The author covers service and field uniforms at the outbreak of war; the development of the Marine's dungaree's; the introduction and development of the camouflage uniforms which became the Marine's trademark in the popular imagination; the 782 gear webbing equipment; the various packs and other load-carrying items; the uniforms, insignia and equipment special to the elite Marine Raiders and Paramarines; the uniforms and accouterments of the US Marine Corps Women's Reserve; and a range of issue and personal small kit items which collectors may encounter. His research is supported by some 100 wartime photographs showing the identified item in use. Assisted and encouraged by the US Marine Corps Historical Center at Quantico, Virginia, Jim Moran has produced an essential reference for the collector, modeler, illustrator and uniform historian.

From the authors: See the Invisible Hand. Understand Your World.

That's the tagline of Modern Principles and our teaching philosophy. Nobel laureate Vernon Smith put it this way: At the heart of economics is a scientific mystery... a scientific mystery as deep, fundamental and inspiring as that of the expanding universe or the forces that bind matter... How is order produced from freedom of choice? We want students to be inspired by this mystery and by how economists have begun to solve it. Thus, we show how markets interconnect and respond in surprising ways to changes in resources and preferences. Consider, for example, how markets respond to a reduction in the supply of oil. Of course, the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more. But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar. An increase in the price of sugar means a reduction in the quantity of candy demanded. So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy! In analyses like this, we teach students to see the invisible hand and in so doing to understand their world. Similarly, we offer a unique and simple proof of the amazing invisible hand theorem that without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs! To understand their world students must understand when self-interest promotes the social interest and when it does not. Thus, Modern Principles has in-depth analyses of externalities, public goods, and ethical issues with market incomes and trade. Moreover, we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries, climate change, and the shortage of human organs for transplant.

Pharmaceutical packaging requires a greater knowledge of materials and a greater intensity of testing than most other packed products, not to mention a sound knowledge of pharmaceutical products and an understanding of regulatory requirements. Structured to meet the needs of the global market, this volume provides an assessment of a wide range of issues. It covers the entire supply chain from conversion of raw materials into packaging materials and then assembled into product packs. Integrating information from many drug delivery systems, the author discusses testing and evaluation and emphasizes traceability and the need to for additional safeguards.

The Process of Dramaturgy: A Handbook is a guide to dramaturgy for students. Its practical approach is to "committing acts of dramaturgy," and contains exercises, models, and examples of how the dramaturg works to make his or her thoughtful and creative contributions to a theatrical production, from pre-production work through the rehearsal process The book provides specific exercises, examples, and models to assist the student or emerging dramaturg in developing the ability to: 1) apply critical methodologies (among them literary theory) to production; 2) better communicate with directors, designers and playwrights within the context of rehearsal and production. It includes a case study for analysis, Neil Simon's *Biloxi Blues*.

Automation in Mining, Mineral and Metal Processing covers the proceedings of the Third International Federation of Automatic Control (IFAC) symposium. The book discusses techniques and methods of automatic control and of system analysis for use in mining, mineral, and metal processing industries. Comprised of 69 chapters, the text presents theories, applications, operations, and maintenance of automation systems in an industrial environment. The topics covered are also relevant in solving various issues in the mining, mineral, and metal processing industries, such as pollution, safety, energy efficiency, human resource, and materials through the implementation of an unmanned system. This book will be of great interest to professionals especially those who are contemplating the use of automated system.

The two-volume "Manual of Nursing" is a comprehensive and up-to-date work on the nursing profession in South Africa. It covers the whole nursing curriculum and broadens the student's scope of knowledge by discussing subjects not included in midwifery, critical care nursing, community nursing and psychiatric nursing. Easy referencing ensures that the set (encapsulating the integrated nursing course) is of immediate and practical use. This work discusses medical and surgical conditions from a nursing perspective. Volume One introduces certain basics of nursing theory and practice and it includes a section dealing with nursing-related services.

Sports Business Management will equip students with a comprehensive understanding of the sport industry. With a focus

on management, strategy, marketing, and finance, the decision-making approach of the book emphasizes key concepts while translating them into practice. Foster, O'Reilly, and Dávila present a set of modular chapters supported with plenty of examples, mini-cases, and exercises to help students apply the decision-making approach to real-world situations. Covering an international array of sports and organizations – including the Olympic Games, FIFA World Cup, US Major League Baseball, and more – the book also covers unique topics such as diversity in sport, the impact of technology, and social media. Rounding this out, the book provides around 50 Harvard/Stanford cases, along with case notes for instructors. This is an ideal textbook for upper-level undergraduate and graduate students of sports business and management, fully supported by a companion website featuring PowerPoint slides, test questions, teaching notes, and other tools for instructors.

A comprehensive guide to running randomized impact evaluations of social programs in developing countries This book provides a comprehensive yet accessible guide to running randomized impact evaluations of social programs. Drawing on the experience of researchers at the Abdul Latif Jameel Poverty Action Lab, which has run hundreds of such evaluations in dozens of countries throughout the world, it offers practical insights on how to use this powerful technique, especially in resource-poor environments. This step-by-step guide explains why and when randomized evaluations are useful, in what situations they should be used, and how to prioritize different evaluation opportunities. It shows how to design and analyze studies that answer important questions while respecting the constraints of those working on and benefiting from the program being evaluated. The book gives concrete tips on issues such as improving the quality of a study despite tight budget constraints, and demonstrates how the results of randomized impact evaluations can inform policy. With its self-contained modules, this one-of-a-kind guide is easy to navigate. It also includes invaluable references and a checklist of the common pitfalls to avoid. Provides the most up-to-date guide to running randomized evaluations of social programs, especially in developing countries Offers practical tips on how to complete high-quality studies in even the most challenging environments Self-contained modules allow for easy reference and flexible teaching and learning Comprehensive yet nontechnical

"Rosenberg introduces a new paradigm called Liberal Naturalism for thinking about what causation is, about the natural world, and about how to create a detailed model to go along with the new paradigm. Arguing that experience is part of the categorical foundations of causality, he shows that within this new paradigm there is a place for something essentially like consciousness in all its traditional mysterious respects."--BOOK JACKET.

Understand new modes of analysing metabolomic data
Metabolomics is the study of metabolites, small molecules and chemical substrates within cells or larger structures which collectively make up the metabolome. The field of metabolomics stands to benefit enormously from chemometrics, an approach which brings advanced statistical techniques to bear on data of this kind. Data Analysis and Chemometrics for Metabolomics constitutes an accessible introduction to chemometric techniques and their applications in the field of metabolomics. Thoroughly and accessibly written by a leading expert in chemometrics, and printed in full-colour, it brings robust data analysis into conversation with the metabolomic field to the immense benefit of practitioners. Data Analysis and Chemometrics for

Metabolomics readers will also find: Statistical insights into the nature of metabolomic hypothesis testing, validation, and more All metabolomics data sets from the book on a companion website Case studies from human, animal, plant and bacterial biology Data Analysis and Chemometrics for Metabolomics is ideal for practitioners in the life sciences, clinical sciences and chemistry, as well as metabolomics researchers or developers of research instruments looking to apply cutting-edge analytical techniques, and statisticians developing methods to design experiments and analyse large datasets of clinical and biological origin.

The Sea Survival Manual is the definitive book on the subject for anyone aboard a yacht of any size. It is aimed at the yachtsman or seafarer who is likely to proceed to sea out of the sight of land, whether for pleasure or professional reasons. Fully compliant with the IMO (International Maritime Organisation) resolutions and MCA (Maritime Coastguard Agency) regulations it embodies Sea Safety checks issued by the MCA and RNLI and is completely international in its appeal. Includes chapters on safety and survival equipment, Global Maritime Distress and Safety Systems (GMDSS), liferafts, grab bags, medical equipment and advice, first aid and emergency treatment, abandoning ship, survival in a liferaft and rescues at sea. This is the first modern book to tackle the subject from the small craft point of view.

In the cold morning of June 6, 1944, thousands of German soldiers are in position from Port en Bessin eastwards past Colleville on the Normandy coast, aware that a massive invasion force is heading straight for them. According to Allied Intelligence, they shouldn't be there. 352 infantry division would ensure the invaders would pay a massive price to take OMAHA

beach. There were veterans from the Russian front amongst them and they were well trained and equipped. The presence of 352 Division meant that the number of defenders was literally double the number expected - and on the best fortified of all the invasion beaches. What makes this account of the bloody struggle unique is that it is told from the German standpoint, using firsthand testimony of German combatants. There are not many of them left and these accounts have been painstakingly collected by the authors over many years.
