Developing Effective Research Proposals SAGE
 Nursing and Healthcare Research at a Glance is perfect for nursing and healthcare students, as well as newly qualified practitioners and anyone looking for a refresher or introduction to research. Covering a broad range of topics gathered under key sections, this essential book combines informative diagrams and images to provide memorable information for students on one page, and accessible, clearly written text on the facing page. It includes information on a range of quantitative and qualitative research methods, the process of gaining ethical permission, conducting research with special groups including children, and successfully conducting reviews of the literature. Key features include: Clear and informative full colour illustrations throughout An emphasis on need-to-know research information for busy students and healthcare staff A wide

range of research methods, currently used in modern healthcare research An impressive line-up of specialist and well-known experts in the field of health and nursing research This book provides quick access to the principles and reality of research and its implementation within the education and practice environment. It is essential reading for anyone in health service education and service settings with limited time who need to draw on research evidence.

A Collaboration Between Burkina Faso and Germany Elsevier Health Sciences
 Equips nursing students with the skills and knowledge to conduct critical literature reviews and write research project plans.

Springer
 This must-have, practical guide for trainee psychologists working towards their British Psychological Society (BPS) qualification in either health psychology or clinical psychology is designed to address the key concerns and questions that students often have when applying research designs in real settings. The book: - Looks specifically at what is required to demonstrate research competence for the qualifications - Is structured around a simple question-and-answer format, making it easy to navigate - Is packed full of tips, including on ethical considerations and

conducting qualitative and quantitative research designs and - Uses health and clinical psychology research examples to highlight key issues for trainees.

Optimizing Treatment for Children in the Developing World SAGE Publications
 Before new interventions can be used in disease control programmes, it is essential that they are carefully evaluated in "field trials", which may be complex and expensive undertakings. Descriptions of the detailed procedures and methods used in trials that have been conducted in the past have generally not been published. As a consequence, those planning such trials have few guidelines available and little access to previously accumulated knowledge. In this book the practical issues of trial design and conduct are discussed fully and in sufficient detail for the text to be used as a "toolbox" by field investigators. The toolbox has now been extensively tested through use of the first two editions and this third edition is a comprehensive revision, incorporating the many developments that have taken place with respect to trials since 1996 and involving more than 30 contributors. Most of the chapters have been extensively revised and 7 new chapters have been added.

Healthcare Research SAGE

THE FIRST BOOK TO PRESENT THE SUCCESSES, CHALLENGES, AND OPPORTUNITIES OF GLOBAL HEALTH NURSING This text is designed specifically for nurses and nursing students who have an interest in global health as a specialty, regardless of experience or education level. It reflects both the unique contributions of the nursing profession and of other disciplines, which is in keeping with the editors' perspective on how to bring about lasting change. The text views global health through a nursing lens, but maintains this awareness and appreciation of interprofessionalism throughout. The editors and contributors have firsthand experience of the complex dynamics in achieving global health, and bring a wealth of knowledge to this important field, which has grown as a course and specialty. The text depicts the worldwide expansion of nursing partnerships between resource-rich and resource-limited countries, discusses challenges and obstacles, and provides cases and guidance on how to achieve global health. It will appeal to all nurses, from student nurses embarking on a global health experience to more experienced global health nurses who offer professional nursing expertise from around the world. The text responds to a recent WHO mandate, which seeks the input of nurses and midwives as part of an interprofessional team of key strategists for facilitating global health. "The Lancet" report is also an important document used throughout the text, and an interview with Dr. Julio Frenk, author of that report, is included. Social, political, cultural, economic, and environmental factors—including climate change—are integrated into determinants of global health. The text covers the foundations of global health, including the emerging concept of climate justice, the ethical context of global health, and the importance of interprofessional education. It addresses key issues of global health with a focus on poor and vulnerable individuals—particularly women and children—and those living in areas of conflict. In addition to describing notable accomplishments toward achieving global health, the book focuses on the need for increasing access to primary care, improving clinical practice through expanded education, and engaging interdisciplinary researchers in discovery of viable solutions. The book includes the perspectives of nurses and colleagues from other disciplines in both resource-rich and resource-limited countries. References provide resources for additional study, and PowerPoint slides and a test bank for instructors accompany the text. KEY FEATURES Case studies depict real-world experiences Presents firsthand knowledge of global health dynamics, challenges, and opportunities Provides a wealth of information from multiple perspectives Authored by contributors across a variety of clinical and academic roles who are experienced in global health nursing and global health Includes chapters written by nurses from both resource-limited and resource-rich countries Suellen Breakey, PhD, RN, is assistant professor at the MGH Institute of Health Professions, in Boston, Massachusetts, where she teaches accelerated BSN students. She completed her BS in biology at Salem State University, an MSN in critical care nursing at the MGH Institute of Health Professions, and a PhD in nursing at Boston College Connell School of Nursing. Her research area is the nurse's role in treatment decision making in seriously ill adults. Her clinical interests are cardiac surgical and critical care nursing. Dr. Breakey's global nursing efforts are focused on prevention and treatment of rheumatic heart disease in resource-limited settings. She is a leader in Team Heart, a nonprofit organization that works in Rwanda. Dr. Breakey led a team that developed the teaching modules, both written materials and videos, which were translated into Kinyarwanda language for their patients. She has also organized and participated in ongoing nursing professional development

An Interactive Student Guide John Wiley & Sons

This is your step-by-step guide on how to write successful research proposals in the health sciences, whether it is for a thesis or dissertation review committee, an ethical review committee or a grant funding committee. Using quantitative, qualitative, and mixed research approaches, follow the journey of Liang and Natasha, two fictional researchers who will help you complete your proposal alongside reading the chapters. This practical guide includes top tips from the authors, read-reflect-respond activities and examples of project plans to equip you with all the tools you need to succeed with your research proposal.

The Development of Health Behavior in Children SAGE

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

Researching Health SAGE

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Core Skills for Social and Health Research Elsevier Health Sciences

Research in Nursing, Midwifery and Allied Health provides students with the theory to understanding research frameworks in nursing and allied health. Using practical examples, this text applies the theory to practice in a number of updated cases that reflect students across the nursing, midwifery and allied health areas. The research framework introduced in the book has three different intersecting purposes: (i) to show students how to critically appraise existing research (ii) to show students how the results of research can be used in clinical practice to inform patient care (iii) to conduct their own research. The sixth edition includes more content than ever before linking research to evidence-based practice, helpfully sign posted throughout the text in new evidence-based practice boxes. Research in Nursing, Midwifery and Allied Health supports instructors as they guide new nursing researchers through the entire research process in a practical and easy to read step-by-step guide. The new four-colour design will be a welcome addition to Cengage's suite of Nursing texts, as well as new CourseMate Express website and Search Me! Nursing, giving students unique access to current journals and news articles specific to nursing and health research.

Health Research Design and Methodology John Wiley & Sons

Writing a research proposal is one of the most important tasks facing academics, researchers and postgraduate students. Yet there is a good deal of misinformation and a great lack of guidance about what constitutes a good research proposal and what can be done to maximise one's chances of writing a successful research proposal. Denicolo and Becker recognise the importance of developing an effective research proposal for gaining either a place on a research degree programme or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own. Developing Research Proposals will help readers to understand the context within which their proposal will be read, what the reviewers are looking for and will be influenced by, while also supporting the development of relevant skills through advice and practical activities. This book: Explores the nature and purpose of different kinds of proposals Focuses on the actual research proposed Discusses how best to carry out and structure the literature review Examines the posing and phrasing of research questions and hypotheses Looks at how methods and methodology should be

handled in a proposal Discusses the crucial issues of planning, strategy and timing in developing targeted proposals Denicolo and Becker draw together the key elements in the process of preparing and submitting a proposal and concludes with advice on responding to the results, successful or not, and their relevance to future proposals. The Success in Research series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

A Handbook for Students and Practitioners SAGE

This book is intended to communicate current best practice in pediatric clinical pharmacology and clinical pharmacy with special consideration of the prevailing circumstances and most pressing needs in developing countries. It also addresses measures that may be taken in countries with emerging economies through organizational and political adjustments to reduce unacceptable levels of morbidity and mortality among children and pregnant women with treatable diseases.

Successful research requires effective and thorough preparation. In this expanded and updated Second Edition of Developing Effective Research Proposals Keith Punch offers an indispensable guide to the issues involved in proposal development and in presenting a well-considered plan for the execution of research. Dealing with both qualitative and quantitative approaches to empirical research across the social sciences, the Second Edition comprehensively covers the topics and concerns relevant to the subject and is organized around three central themes: What is a research proposal, who reads proposals and why? How can we go about developing a proposal? and What might a finished proposal look like? New features of this edition include: -Expanded sections covering research strategy, research planning and academic writing -Examples of successful research proposals from across the social science disciplines -A more comprehensive discussion of ethics -A brand new glossary and chapter summaries The Second Edition will be welcomed by all those preparing or evaluating research proposals, and will be invaluable across all areas of social science, both basic and applied, and for students undertaking quantitative, qualitative and mixed-method studies.

Winner of the 1st-place American Journal of Nursing Book of the Year award in nursing research/evidence-based practice for 2021! Burns & Grove's The Practice of Nursing Research: Appraisal, Synthesis, and Generation of Evidence, 9th Edition is the trusted resource for those wanting to master the research methods that are foundational to evidence-based practice. This highly respected textbook covers how to appraise and apply existing research evidence, as well as how to participate in research and quality improvement projects. This new 9th edition has been extensively updated to reflect today's focus on online research in the digital era and includes clear, step-by-step guidelines for all major quantitative and qualitative research approaches — including supporting examples from the latest high-quality literature. There's also new content on translational research, coverage of the most current research tools and techniques, and an increased use of illustrations, tables, and other visuals to help engage visually oriented readers of all levels. Coverage of quantitative, qualitative, and other research methodologies provides a solid foundation to conduct, appraise, and apply research evidence to the realities of today's clinical practice. Balanced coverage of qualitative and quantitative methods addresses the qualitative research methodologies that are often the starting point of research projects, particularly in magnet hospitals and DNP programs. Clear, comprehensive coverage is organized into five units that include: an introduction to nursing research; coverage of the research process; application for evidence-based health care; how to analyze data, determine outcomes, and disseminate research; and how to propose and seek funding for research. Strong emphasis on evidence-based practice addresses this key graduate-level QSEN competency and reinforces how to generate research evidence and appraise and synthesize existing research for application to clinical practice. Rich examples from nursing literature bring research principles to life. Emphasis on the most currently

used research methodologies focuses on the methods used in both quantitative research and qualitative research, as well as outcomes research and mixed-methods research. Coverage of digital data collection examines the use of online research tools. Quick-reference summaries include a table of research methods inside the front cover and a list of types of research syntheses (with definitions) inside the back cover. Helpful user resources are included with each new text purchase on the companion Evolve website and feature 400 interactive review questions along with a library of 10 full-text research articles.

The Environmental Protection Agency Fiscal Year 2008 Research and Development Budget Proposal SAGE

This book accompanying web resource will answer all your questions by introducing you to the concepts, theories and practicalities surrounding healthcare research. The aim of both the book and the web resource is to help you to write a good healthcare research proposal-which is the starting point for any would-be student researcher. The book takes a look at the theory of research but also provides practical help and advice along the way. It takes the reader through the stages of the research process from developing the question to communicating the findings, demystifying the process on the way. The web resource works alongside the book, supplementing and expanding on the chapters, giving you the ability to prepare your very own research proposal.

Designing and Conducting Health Systems Research Projects Learning Matters

Comprehensive and thorough in scope, The Research Process in Nursing 7th edition provides

everything you could want to know about research methods. This established textbook reflects the significant advances in nursing research and the importance of evidence-based practice, and provides an invaluable resource for both the novice and the more experienced researcher. It includes practical information and advice on: How to find and critique the evidence How to choose the right approach How to collect data How to make sense of the data How to put research into practice Special features: A clear, explicit and easy to understand text which links theory with practical steps in the research process. Examples provided allow the reader to apply a variety of research concepts to theoretical learning and professional practice. Incorporates chapters, research examples, and policy from a range of international countries, including Canada, Australia, USA and Hong Kong. Provides detailed discussions around each example, which clearly link theory with practice Easy to read for novice researchers and undergraduate nursing students, but at the same time provides sufficient depth and detail to be of value to experienced researchers and practitioners.

Designing and Conducting Health Systems Research Projects: Proposal development and fieldwork John Wiley & Sons

Explains various methodologies and analyses of the design of research in health science, emphasizing applications rather than theory. Addressed to students who need to design and complete a research project in order to obtain a degree, to instructors of such students, and to new researchers in any of the various health sciences. Focuses on key elements in writing research proposals, interpreting resource data based on analysis, and reporting research findings. Includes

many examples. Acidic paper. Annotation copyrighted by Book News, Inc., Portland, OR

Developing a Healthcare Research Proposal Jones & Bartlett Learning

Competition for research funds in epidemiology, preventative medicine, and biostatistics has never been more intense and, at the same time, the grant application and review process at such agencies as the National Institutes of Health (NIH) is undergoing significant transformation. Writing Dissertation and Grant Proposals: Epidemiology, Preventive Medicine and Biostatistics targets effective grant proposal writing in this highly competitive and evolving environment. Covering all aspects of the proposal writing process, the text: Provides summary checklists and step-by-step guidelines for grant structure and style alongside broader strategies for developing a research funding portfolio Explains how to avoid common errors and pitfalls, supplying critical do's and don'ts that aid in writing solid grant proposals Demonstrates proven tactics and illustrates key concepts with extensive examples from successfully funded proposals Written by an established NIH reviewer with inside knowledge and an impressive track record of funding, Writing Dissertation and Grant Proposals: Epidemiology, Preventive Medicine and Biostatistics is a virtual cookbook of the appropriate ingredients needed to construct a winning grant proposal. Therefore, the text is not only relevant for early-stage investigators including graduate students, medical students/residents, and postdoctoral fellows, but also valuable for experienced faculty, clinicians, epidemiologists, and health professionals who cannot seem to break the barrier to obtain NIH-funded research.
