 Probability Practice Questions - Corbettmaths
 Probability is the maths of chance. A probability is a number that tells you how likely (probable) something is to happen. Probabilities can be written as fractions, decimals or percentages.
 Probability test questions - KS3 Maths Revision - BBC Bitesize
 $P(E) = n(E) / n(S) = 36 / 36 = 1$
 Question 5 A die is rolled and a coin is tossed, find the probability that the die shows an odd number and the coin shows a head. Solution Let H be the head and T be the tail of the coin. The sample space S of the experiment described in question 5 is as follows
 $S = \{(1,H),(2,H),(3,H),(4,H),(5,H),(6,H)\}$
 Probability Questions with Solutions
 How To Solve The Toughest IGCSE Maths Probability Questions
 There's a 100% probability that you'll encounter a question on the topic of probability in your IGCSE Maths exam!
 It's true that most probability questions are relatively straightforward (check out our revision videos here), but every now and again a super-tricky problem pops up on the exam paper, often worth 3, 4, or 5 marks.

 Figure 1.3.1 - Probability Distribution for Sum of Two Six-Sided Dice
 This probability distribution involves different probabilities for different outcomes. Those (like for the roll of a single die) that provide the same probability for all outcomes are called uniform.
 1.3: Probability & Statistics - Physics LibreTexts
 5. Experimental probability. Also known as theoretical probability; This is where the probability of an event can be determined by considering all the possible outcomes (eg. on a dice we would say the probability of getting each individual number is 1/6) without performing any trials

 \$begingroup\$ For (a): First, what is the probability that neither of the two senators from CA is chosen among the 10 randomly chosen committee members?
 That's $\frac{\binom{98}{2}}{\binom{100}{2}}$.
 Second, what is the answer to (a). [Of course Senate committee members are chosen with political agendas in mind, so it's not a realistic question.]
