The concept of sustainability has grown in recognition and importance. The pressure on companies to broaden their reporting and accountability from economic performance for shareholders, to sustainability performance for all stakeholders is leading to a change of mindset in consumer behaviour and corporate policies. How can we develop prosperity without compromising the life and needs of future generations? Sustainability in Project Management explores and identifies the questions surrounding the integration of the concepts of sustainability in projects and project management and provides valuable guidance and insights. Sustainability relates to multiple perspectives, economical, environmental and social, but also to responsibility and accountability and values in terms of ethics, fairness and equality. The authors will inspire project managers to be aware of these considerations, and to apply them to the role they play in projects, not just 'doing

things right' but 'doing the right things right'.

A Guide to the Project Management Body of Knowledge (PMBOK® Guide) provides generalized project management guidance applicable to most projects most of the time. In order to apply this generalized guidance to construction projects, the Project Management Institute has developed the Construction Extension to the PMBOK® Guide. This Construction Extension provides construction-specific guidance for the project management practitioner for each of the PMBOK® Guide Knowledge Areas, as well as guidance in these additional areas not found in the PMBOK® Guide: •All project resources, rather than just human resources •Project health, safety, security, and environmental management •Project financial management, in addition to cost •Management of claims in construction This edition of the Construction Extension also follows a new structure, discussing the principles in each of the Knowledge Areas rather than discussing the individual processes. This approach broadens the applicability of the Construction Extension by increasing the focus on the "what" and "why" of construction project management. This Construction Extension also includes discussion of emerging trends and developments in the construction industry that affect the application of project management to construction projects.

Research Paper (postgraduate) from the year 2008 in the subject Sociology - Work, Profession,

Education, Organisation, grade: Keine, , course: Happy Projects '08, Vienna, May 2007, 3 entries in the bibliography, language: English, abstract: Project management competences are essential for the successful management of work packages in today's global business environments. Associated skills such as influencing others, negotiating and the planning and organizing of activities are vital for those who wish to be effective at whatever they do. This is not limited to the work place. These skills are fully transferable to most life and work situations. As such, skills can be used at school, college, university and in private life. These skills should be taught to young students much earlier. This paper investigates the level of project management that is currently being taught at Secondary Grammar/Gymnasium/Sixth Form schools in the UK, Austria and the Czech Republic. It appears that project management is taught at a relatively small number of selective schools only and that there is a lot of scope and interest to teach young students the essential principles and skills of project management as early as 14 years of age. The outcome of this research suggests that it is desirable that young students are given the opportunity to learn more about project management competences and skills so they can learn and apply these in their educational, working and private lives.

Look around your organization: can you identify who owns project management? Would that person appreciate that they own responsibility for your projects? Project Leadership: Creating Value with an Adaptive Project Organization highlights the importance of these questions—underlining the importance not only of the project team but on the culture of executive leadership to the success of projects. It offers straight-forward takeaways and solutions to provide executives with the tools to implement an effective project environment. The book begins with a discussion of the project environment and what it means for a project to succeed or fail in today's world. It introduces the Adaptive Project Management Model followed by a review of the systems and tools that give firms increasing ability to maintain priority on strategic projects and manage their associated uncertainty. Working through the book, you can progressively apply tactics from each chapter to increase your project leadership capability and improve your process so that your projects adapt as required depending on the nature of the portfolio itself. Ask yourself this—what is my customer buying? What do they really want? The one element that all organizations have in common is that customers are buying execution, and not much else. Therefore, ultimately, this book is about execution—getting things done and making things happen. It details methods and tactics that help you execute projects more effectively and give your organization the edge in the current, fast-paced marketplace.

There are more than 1.8 million nonprofits in the United States and at least 3 times that many

internationally. Workers in these nonprofits and civil society organizations increasingly look to academic programs to provide leadership and management training. This edited volume is designed to provide new and experienced faculty and program administrators with a broader conception of how the nonprofit leaders of the future are and could be educated. The chapters are written by experienced nonprofit program leaders who provide guidance on all aspects of building and more importantly maintaining a successful nonprofit program. Many of the chapters are

written by former leaders of the nonprofit Academic Centers Council (NACC), a recognized international leader in nonprofit management curricular development, while others are written by successful founders and administrators of nonprofit programs both in the US and internationally. All chapters are however grounded in the experience of the authors, supplemented with research on best practices and focusing on future trends in the field. Preparing Leaders of nonprofit Organizations examines key issues and challenges in the field from multiple perspectives, some of which are curricular and intellectual while others are related to program administration and

oversight. The text explores core concepts, distills distinctive features of new or emerging academic programs, and identifies ways program leadership might ensure those features are reflected in their programs regardless of where these are housed within a university. The book is an essential resource for faculty and administrators who work with or are seeking to develop a nonprofit education program. It is also a useful guide for graduate students seeking a career in the nonprofit academy.
