This exciting new text teaches the foundations of electric circuits and develops a thinking style and a problem-solving methodology that is

based on physical insight. Designed for the first course or sequence in circuits in electrical engineering, the approach imparts not only an appreciation for the elegance of the mathematics of circuit theory, but a genuine "feel" for a circuit's physical operation. This will benefit students not only in the rest of the curriculum, but in being able to cope with the rapidly changing technology they will face on-the-job. The text covers all the traditional topics in a way that holds students' interest. The presentation is only as mathematically rigorous as is needed, and theory is always related to real-life situations. Franco introduces ideal

transformers and amplifiers early on to stimulate student interest by giving a taste of actual engineering practice. This is followed by extensive coverage of the operational amplifier to provide a practical illustration of abstract but fundamental concepts such as impedance transformation and root location control--always with a vigilant eye on the underlying physical basis. SPICE is referred to throughout the text as a means for checking the results of hand calculations, and in separate end-of-chapter sections, which introduce the most important SPICE features at the specific points in the presentation at which students will find them most useful. Over 350

worked examples, 400-plus exercises, and 1000 end-of-chapter problems help students develop an engineering approach to problem solving based on conceptual understanding and physical intuition rather than on rote procedures.

Elvis Cole finds himself deep in the bayou of Louisiana searching for the estranged parents of a television star -- but something deadly is looking for him. L.A. private eye Elvis Cole is hired by popular television star Jodie Taylor to delve into her past and identify the biological parents who gave her up for adoption thirty-six

years before. Cole's assignment is to find out their biological history and report back. It seems all too clear cut. But when he gets to Louisiana and begins his search, he finds that there's something much darker going on. Other people are also looking for Taylor's parents, and some are ending up dead. And when Cole realizes that his employer knew more than she was telling, Voodoo River becomes a twisting tale of identity, secrets, and murder.

 Whenever there will be a talk about Stoic Philosophy we wouldn't keep away Epictetus from the discussions. The school of stoic philosophy was founded in 3rd century B.C in Athens, the then Greek cultural and strategic capital, by Zeno of Citium. Citium is actually today's Cyprus which has its capital in Nicosia. It is located to the east of Greece in the Mediterranean Sea. And it is the third largest Mediterranean Island both in land size and population. The need of mentioning Zeno here or anywhere else is lies in the fact that the "Core" of teachings of Stoicism is propagated first by him and then further

developed and disseminated by others. Stoicism is essentially based on moral ideas of cynics and it greatly emphasizes on goodness and peace of mind. The success of School of Stoicism can be acknowledged in light of evidences furnished by modern researches which clears that it (Stoicism) not only flourished from Hellenistic period through the Roman era but also played a vital role in everyday lives of Greek population/society. The earliest ideas of Stoicism were based on three key components or drivers, namely, Logic composed of Rhetoric and Grammar, and theories of Perception and thought, Physics, which had its extent

from then available knowledge of physical nature of universe to the divine and godly beings and the Ethics which had its end goals to cater eternal happiness through adopting ways of righteousness in way of living. The Life of Epictetus: In light of modern researches and knowledge gained by deciphering of the Greek anecdotes of ancient times, the date of birth of Epictetus is estimated to be around 55 A.D. His place of birth is contemplated as Hierapolis, Phrygia (Now a part of Turkey). The birth name of Epictetus is still unknown and his known name "Epictetus" simply means "acquired" in Greek. Possibly this name was christened or rechristened upon

him by his master Epaphroditos. Epaphroditos was a wealthy freedman and a secretary to Nero (Nero Claudius Caesar Augustus Germanicus was a Roman Emperor between 54-68 A.D; Nero was an infamous emperor who according to the Greek people was responsible for lighting Great Fire of Rome that remained 18 July-19 July, 64 A.D. He committed suicide in 68 A.D to escape assassination).His Interest in Philosophy and His Freedom: In early phases of life Epictetus acquired great interest/passion in philosophy, and with the permission of his affluent master he studied stoic philosophy under the guidance of Musonius Rufus. This allowed him to gain education, and

respect in the society. Later on, after the death of Nero in 64 A.D he acquired his freedom and started teaching stoic philosophy in Rome.His School in Nicopolis, Epirus: When Domitian came to power and become Emperor of Rome in 93 A.D he banished all philosophers from the city. Titus Flavius Caesar Domitianus Augustus or Domitian was a believer of chief deity Jupiter and emphasized on enhanced connections with it and patronized its priests and temples at Capitoline Hill. He was also a great devotee of Goddess Minerva.So when Domitian or Titus Flavius Caesar Domitianus Augustus banished philosophers from Rome Epictetus

escaped to Nicopolis, Epirus and laid base of his school of thought/philosophy. His Discourses and the Enchiridion: His most famous pupil Arrian of Nicomedia who was a historian, military commander, public servant and philosopher of 2nd century, studied under him in his youth and claimed to have written his famous Discourses. Arrian describes his teacher Epictatus as a powerful and magnetic speaker who had the ability to make the listeners feel things that he desired. He tells that many eminent figures of that time often sought conversation with Epictatus. He further exclaims that Roman emperor Publius Aelius Hadrianus Augustus had friendly

relationships with Epictetus. It is noteworthy that Roman Emperor Publius Aelius Hadrianus Augustus was a successor of Domitian or Titus Flavius Caesar D. Augustus.

The field of single charge tunneling comprises of phenomena where the tunneling of a microscopic charge, usually carried by an electron or a Cooper pair, leads to macroscopically observable effects. The first conference entirely devoted to this new field was the NATO Advanced Study Institute on Single Charge Tunneling held in Les Hauches, France, March 5-15,

1991. This book contains a series of tutorial articles based on lectures presented at the meeting. It was intended to provide both an introduction for nonexperts and a valuable reference summarizing the state of the art of single charge tunneling. A complementary publication with contributions by participants of the NATO Advanced Study Institute is the Special Issue on Single Charge Tunneling of *Zeitschrift für Physik B*, Vol. 85, pp. 317-468 (1991). That issue with original papers provides a snapshot of the leading edge of current research in the field. The success of the meeting and the publication of this volume was made possible through the

generous support of the NATO Scientific Affairs Division, Brussels, Belgium. The Centre de Physique des Hautes Pressions has provided a superbly situated conference site and took care of many local arrangements. Both for the preparation of the conference and the handling of some manuscripts the support of the Centre d'Etudes de Saclay was essential. The editing of the proceedings volume would not have been possible without the dedicated efforts of Dr. G. -1. Ingald, who tailored a 1\.

Successful technical blogging is not easy but it's also not magic. Use these techniques to attract and keep an audience of loyal, regular readers. Leverage this popularity to reach your goals and amplify your influence in your field. Get more users for your startup or open source project, or simply find an outlet to share your expertise. This book is your blueprint, with step-by-step instructions that leave no stone unturned. Plan, create, maintain, and promote a successful blog that will have remarkable effects on your career or business. Successful people often get recognition by teaching

what they know.

Blogging is a reliable path to do that, while gaining influence in the process. The problem is getting it right. Far too often professionals start a blog with big hopes, only to quickly give up because they don't get speedy results. This book will spare you that fate, by outlining a careful plan of action. A plan that will bring amazing benefits to your career, new job possibilities, as well as publishing, speaking, and consulting opportunities. And if you are blogging for business, you'll attract new customers, partners, and outstanding employees. Understand what blogging is and how it can improve your professional (and

personal) life. Devise a plan for your new or existing blog. Create remarkable content that ranks well in Google and is shared by readers. Beat procrastination by employing proven time-management techniques that make you an efficient and effective blogger. Promote your blog by mastering on-page and off-page SEO, as well as social media promotion, without compromising your ethics. Analyze your traffic to understand your audience and measure growth. Build a community around your blog and make the best of your newfound popularity, by maximizing its benefits for your career, business, or simply for extra income. Create and

maintain a successful technical blog that will amplify your impact, influence, and reach by following Antonio's step-by-step plan.

Solid-Liquid Separation, Third Edition reviews the equipment and principles involved in the separation of solids and liquids from a suspension. Some important aspects of solid-liquid separation such as washing, flotation, membrane separation, and magnetic separation are discussed. This book is comprised of 23 chapters and begins with an overview of solid-liquid separation processes and the principles involved, including flotation, gravity sedimentation, cake filtration, and deep bed filtration. The following chapters focus on the

characterization of particles suspended in liquids; the efficiency of separation of particles from fluids; coagulation and flocculation; gravity thickening; and the operating characteristics, optimum design criteria, and applications of hydrocyclones. The reader is also introduced to various solid-liquid separation processes such as centrifugal sedimentation, screening, and filtration, along with the use of filter aids. Countercurrent washing of solids and problems associated with fine particle recycling are also considered. The final chapter is devoted to the thermodynamics of particle-fluid

interaction. This monograph will be useful to chemical engineers and process engineers, particularly those in plant operation, plant design, or equipment testing and commissioning. It can also be used as a textbook for both undergraduate and postgraduate students.

In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After

graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from

the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to

business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago. This book discusses the latest advances in the broadly defined field of advanced manufacturing and process control. It reports on cutting-edge strategies for sustainable production and product life cycle management, and on a variety of people-centered issues in the design, operation and management of manufacturing systems and processes. Further,

it presents digital modeling systems and additive manufacturing technologies, including advanced applications for different purposes, and discusses in detail the implementation of and challenges imposed by 3D printing technologies. Based on three AHFE 2020 Conferences (the AHFE 2020 Virtual Conference on Human Aspects of Advanced Manufacturing, the AHFE 2020 Virtual Conference on Advanced Production Management and Process Control and the AHFE 2020 Virtual Conference on Additive Manufacturing, Modeling Systems and 3D Prototyping, the book merges ergonomics research, design applications, and up-to-date analyses of various

engineering processes. It brings together experimental studies, theoretical methods and best practices, highlights future trends and suggests directions for further technological developments and the improved integration of technologies and humans in the manufacturing industry.

An evidence-based scientific understanding of factors determining Olympic winter sports performance, recent changes, the evolution in training content and methods, the improvement in technology as well as the occurrence of injury and illness is required. On one hand, this would provide the

opportunity to translate research to practice. On the other hand, to guide the practice of Olympic winter sports with the ultimate goal of improving the performance. Certainly, the continued evolution of Olympic winter sports has contributed to an enormous accumulation of knowledge, evidence, and relevant training technologies. Sports sciences, including physiology, conditioning, nutrition, biomechanics, coaching, psychology, as well as sport technology, history and social sciences, have much to contribute to the preparation of the athletes in the Olympic winter sports. Consequently, this Research Topic sought

to provide a platform of contributions to set out a comprehensive framework of the components that should be addressed when developing training plans leading to elite Olympic winter sports performance. Overall, the papers were all directed toward a better understanding of physiological, biomechanical, and training factors related to different Olympic winter sports disciplines: cross-country skiing, alpine skiing, biathlon, Nordic combined, speed skating, snowboarding, and ski-cross.
