EPICYCLIC GEAR TRAIN: ...What is an epicyclic gear train? - Quora
 Epicyclic Train Example: We use the method introduced in Epicyclic Ratio Calculation for determining the final gear ratio of an epicyclic gear train. This method is extremely methodical, which is appropriate since use of intuition is quite futile with an epicyclic gear train such as the following example.
 Gears: Epicyclic Train Example - eFundarm and the sun gear will each be driven in some direction at some velocity. In many cases, one of these inputs will be zero velocity, i.e., a brake applied to either the arm or the sun gear. Note that a zero velocity input to the arm merely makes a conventional train out of the epicyclic train as shown in Figure 9-32a.

 Epicyclic gear train. In the first three types of gear trains, the axes of the shafts over which the gears are mounted are fixed relative to each other. But in case of epicyclic gear trains, the axes of the shafts on which the gears are mounted may move relative to a fixed axis.
 Gear Trains Article should be called planetary gears, not epicyclic gears. This article should be called planetary gearing because planetary gear-trains are just a specific instance of epicyclic gear-trains and there are many other configurations of epicyclic gear trains, for example a differential gear-train.

 Epicyclic gearing requires a step-by-step process to make it work, and some of the steps are not necessarily intuitive. As such, this article aims to provide assistance and guidelines for people designing epicyclic gear trains for the first time—and perhaps, if you will, ease their degree of suffering.

 An epicyclic spur gear train as shown in Figure 12-16 (p.732) has a sun gear of 33 teeth and a planet gear of 21 teeth. Find the required number of teeth in the ring gear and determine the ratio between the arm and sun gear if the ring gear is held stationary.
 Solved: An epicyclic spur gear train as shown in Figure 12 ...
 A frequent application of epicyclic gear trains is accomplishing a large speed reduction in a small space. A planetary or epicyclic gear train is one type of gear train used to transmit motion. Epicyclic gear trains consist of two or more gears mounted so that the center of one gear revolves around the center of the other.
