"This book is meant to be an introduction only - a starting point to a biblical view of the universe. . . . Who knows what amazing truths are waiting to be discovered if only the shackles of secular thinking are removed. Now is the time of discovery..."
Take a breathtaking look at the universe that is comprehensive guide to the heavens! Sit back and explore the world at your

fingertips in this book which:
Explains the scale and size of the universe that is hard for our minds to imagine - yet can only indicate the Master's hand at work. Over 50 full-color, rarely seen photos of stars, nebulae, and galaxies. Filled with facts that challenge secular theories and models of the universe - how it began and how it continues to amaze the scientific community.

Explores numerous evidences that point to a young universe: magnetic poles of planets, the spiral shape of galaxies, comets and how long scientists think they can last, and much more. With a doctorate in astrophysics from the University of Colorado, Dr. Jason Lisle is your guide to the universe beyond our world in this remarkable book. Step out among the stars and experience

the truly awesome power of God through this glimpse of His vast creation.

Is Atheism Dead? is an entertaining, impressively wide-ranging, and decidedly provocative answer to that famous 1966 TIME cover that itself provocatively asked "Is God Dead?" In a voice that is by turns witty, muscular, and poetic, Metaxas intentionally echoes C.S. Lewis and G.K.

Chesterton in cheerfully and logically making his astonishing case, along the way presenting breathtaking—and often withering—new evidence and arguments against the idea of a Creatorless universe. Taken all together, he shows atheism not merely to be implausible and intellectually sloppy, but now demonstrably ridiculous. Perhaps the only

unanswered question on the subject is why we couldn't see this sooner, and how embarrassed we should be about it.

Taking Back Astronomy

HarperCollins This is the first major work of the famous mediaeval scholastic theologian John Duns Scotus to be translated into English in its entirety. One of the towering intellectual figures of his age, Scotus has had a lasting influence on

Western philosophy comparable only to that of Thomas Aquinas. The questions Scotus discusses on the subject "God and Creatures" were originally presented to him in the course of a quodlibetal dispute, a public debate popular in the thirteenth and fourteenth centuries. In revising the questions for publication, Scotus wove in much of his basic philosophy and theology, making this

work one of the mainstays on which his reputation as a thinker depends. The text of the English translation is based on the most authoritative version of the original Latin text. The extensive annotation and a glossary of technical terms permit each question to be read as an integral treatise in its own right. Originally published in 1975. The Princeton Legacy Library uses the latest print-on-

demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly

heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

 Everyone wants to believe in something beyond or someone bigger than themselves, but nobody wants to be duped. In order to provide answers to people who are seeking the truth, Mark Mittelberg updates for today the classic book

by Robert Laidlaw that sold millions, The Reason Why. This short book gives clear, concise reasons why belief in God makes sense.
God, Physics, and the Gender Wars Sophia Institute Press
 A thrilling biography of the universe, as seen through the lens of today's most cutting-edge scientific thinking. Here's the book that explains the universe. You Are Here is an exhilarating journey that

shows the cosmos as it has never been seen before. From the smallest parts of matter to the largest structures in the universe, Christopher Potter traces the life of the universe from theories of its conception to theories of its eventual fate. Along this heart-stopping voyage from quarks to galaxies, he writes entertainingly about the history and philosophy of science. With wisdom and wonder, Potter

traverses the cosmos from its formation to its eventual end – while exploring everything in between. Some questions You Are Here sets out to answer:

- What is this ‘everything’ that has evolved from nothing? And what do we mean by everything?
- What stuff is ‘nothing’ made out of?
- If the universe contains everything there is then what is it contained in?
- Where are we in the

universe? • Is there room for God in a material universe? • How scared should we be? • What fate awaits the universe? Science actually has answers to these questions, and in *You Are Here*, Potter will explain them to you. [Until the End of Time](#) Image In the *Beginning: Science Faces God in the Book of Genesis*. The beginning of time. The origin of life. In our Western civilization,

there are two influential accounts of beginnings. One is the biblical account, compiled more than two thousand years ago by Judean writers who based much of their thinking on the Babylonian astronomical lore of the day. The other is the account of modern science, which, in the last century, has slowly built up a coherent picture of how it all began. Both represent the

best thinking of their times, and in this line-by-line annotation of the first eleven chapters of Genesis, Isaac Asimov carefully and evenhandedly compares the two accounts, pointing out where they are similar and where they are different. "There is no version of primeval history, preceding the discoveries of modern science, that is as rational and as inspiring as that of the

Book of Genesis," Asimov says. However, human knowledge does increase, and if the biblical writers "had written those early chapters of Genesis knowing what we know today, we can be certain that they would have written it completely differently." Isaac Asimov brings to this fascinating subject his wide-ranging knowledge of science and history--and his award-winning ability to explain the

complex with accuracy, clarity, and wit.

While the Bible declares, "The fool has said in his heart that there is no God," our culture has turned that statement on its head. The mantra of today's intellectual crowd is that the fool is the one who believes in God. Sadly, some Christians are starting to believe this, too. Will Davis Jr. says this is nonsense. You don't have to stop thinking to be a Christian. In fact, faith is

the logical, natural progression of good reasoning, and it is less foolish to believe in God than not to believe. With common language, humor, biblical teaching, and real-life stories, *Why Faith Makes Sense* helps everyday believers understand why belief is the rational outcome of clear thinking about the evidence that surrounds us. *The Physics of Christianity* Harper & Row Barnes &

Noble Import Division Is your worldview enlightened enough to accommodate both science and God at the same time? Dr. Michael Guillen, a best-selling author, Emmy award-winning journalist and former physics instructor at Harvard, used to be an Atheist--until science changed his mind. Once of the opinion that people of faith are weak, small-minded folks who just don't understand

science, Dr. Guillen ultimately concluded that not only does science itself depend on faith, but faith is actually the mightiest power in the universe. In *Believing Is Seeing*, Dr. Guillen recounts the fascinating story of his journey from Atheism to Christianity, citing the latest discoveries in neuroscience, physics, astronomy, and mathematics to pull back the curtain on

the mystery of faith as no one ever has. Is it true that "seeing is believing?" Or is it possible that reality can be perceived most clearly with the eyes of faith--and that truth is bigger than proof? Let Dr. Guillen be your guide as he brilliantly argues for a large and enlightened worldview consistent with both God and modern science. *God and Creatures* God and the Astronomers What does it

mean to be an American Christian? In *Letters to an American Christian*, Bruce Riley Ashford, author of *One Nation Under God*, addresses overarching issues of the relationship of Christianity and politics, speaks to the way historic Christian belief informs specific hot-button political issues, and challenges readers to take seriously both our heavenly and earthly citizenships.

Written as a series of letters to "Christian"—a young college student who is a new believer—*Letters to an American Christian* will help every reader think carefully about how Christianity informs what it means to be an American. In the midst of a rapidly changing national and political landscape, *Letters to an American Christian* reminds us of two important truths: we cannot afford

to shrink away from our earthly citizenship, and we cannot afford to lose sight of our heavenly citizenship. *Journey to the Stars* Simon and Schuster Earth. The Final Frontier Contrary to popular belief, Earth is not an insignificant blip on the universe's radar. Our world proves anything but average in Guillermo Gonzalez and Jay W. Richards' *The Privileged Planet: How Our Place in the Cosmos Is*

Designed for Discovery. But what exactly does Earth bring to the table? How does it prove its worth among numerous planets and constellations in the vastness of the Milky Way? In *The Privileged Planet*, you'll learn about the world's life-sustaining capabilities, water and its miraculous makeup, protection by the planetary giants, and how our planet came into existence in the first

place.

A ground-breaking book that takes on skeptics from both sides of the cosmological debate, arguing that science and the Bible are not at odds concerning the origin of the universe. The culmination of a physicist's thirty-five-year journey from MIT to Jerusalem, *Genesis and the Big Bang* presents a compelling

argument that the events of the billions of years that cosmologists say followed the Big Bang and those of the first six days described in Genesis are, in fact, one and the same—identical realities described in vastly different terms. In engaging, accessible language, Dr. Schroeder reconciles the observable facts of science with the very essence of Western religion: the

biblical account of Creation. Carefully reviewing and interpreting accepted scientific principles, analogous passages of Scripture, and biblical scholarship, Dr. Schroeder arrives at a conclusion so lucid that one wonders why it has taken this long in coming. The result for the reader—whether believer or skeptic, Jewish or Christian—is a totally fresh understanding of the key events in the

life of the universe. Reasonable Faith WestBow Press
A highly respected physicist demonstrates that the essential beliefs of Christianity are wholly consistent with the laws of physics. Frank Tipler takes an exciting new approach to the age-old dispute about the relationship between science and religion in The Physics of Christianity. In reviewing centuries of

writings and discussions, Tipler realized that in all the debate about science versus religion, there was no serious scientific research into central Christian claims and beliefs. So Tipler embarked on just such a scientific inquiry. The Physics of Christianity presents the fascinating results of his pioneering study. Tipler begins by outlining the basic concepts of physics for the lay reader and brings to

light the underlying connections between physics and theology. In a compelling example, he illustrates how the God depicted by Jews and Christians, the Uncaused First Cause, is completely consistent with the Cosmological Singularity, an entity whose existence is required by physical law. His discussion of the scientific possibility of miracles provides an impressive, credible

scientific foundation for many of Christianity's most astonishing claims, including the Virgin Birth, the Resurrection, and the Incarnation. He even includes specific outlines for practical experiments that can help prove the validity of the "miracles" at the heart of Christianity. Tipler's thoroughly rational approach and fully accessible style sets The

Physics of Christianity apart from other books dealing with conflicts between science and religion. It will appeal not only to Christian readers, but also to anyone interested in an issue that triggers heated and divisive intellectual and cultural debates. *Is Atheism Dead?* Crossway
If you think atheists have reason, evidence, and science on their side, think again!

Award-winning author Dr. Frank Turek (I Don't Have Enough Faith to be an Atheist) will show you how atheists steal reason, evidence, science, and other arguments from God in trying to make their case for atheism. If that sounds contradictory, it's because it is! Atheists can't make their case without appealing to realities only theism can explain. In an engaging and memorable way, Stealing

from God exposes these intellectual crimes atheists are committing and then provides four powerful reasons for why Christianity is true. *Redeeming Science* Gateway Editions In our post-Christian, pluralistic society, responding to the perception that Christians are prejudiced, anti-intellectual, and bigoted has become a greater challenge than

ever before. The result is often intimidation, withdrawal, and even doubts among God's people about what we really believe. Bestselling author and teaching pastor at Living on the Edge, Chip Ingram, wants to change that. In *Why I Believe*, he gives compelling answers to questions about - the resurrection of Christ - the evidence of an afterlife -the accuracy and intellectual feasibility of

the Bible - the debate between creation and evolution - the historicity of Jesus - and more The solid, biblical, logical answers he shares will satisfy the honest doubts that every	believer experiences now and then, and will provide practical, thoughtful answers that can be shared with family and friends. This is the perfect resource for churches, small groups,	and individuals who long not only to really know what and why they believe, but also to be equipped to explain the intellectual justification for their faith in everyday language.
