Mantegazza (1831-1910) was probably the most eclectic figure in late-nineteenth century Italian culture. A prolific writer, Mantegazza can be seen as a forerunner of what has come to be known as cultural studies on account of his interdisciplinary approach, his passionate blend of scientific and literary elements in his writings, and his ability to transcend the boundaries between 'high' and 'low' culture. Though extremely popular during his lifetime both in Italy and abroad,

Mantegazza's works have not been made available in a significant English language compilation. This volume is a representative overview of Mantegazza's key works, many of them translated into English for the first time. In addition to the unabridged *Physiology of Love* (1873), a veritable best-seller at the time of its initial publication, this compilation features selections from Mantegazza's writings on medicine, his travelogues, his epistolary novel *One*

Day in Madeira (1868), and his treatise on materialistic aesthetics. Replete with an extensive and informative introduction by the editor, *The Physiology of Love and Other Writings* also excerpts Mantegazza's works of science fiction, memoir, and social and cultural criticism. As an anthology of the works of Paolo Mantegazza, a writer of diverse topical orientations, this volume is also an account of the circulation of ideas and cross-fertilization of disciplines that defined a

crucial period of Italian and European cultural life.

This book provides a broad clinical overview of primary and secondary immunodeficiencies nested in clinical cases that will help the reader understand the approach to evaluation, diagnosis,

and management of these challenging cases.

Chapters begin with a comprehensive overview of immunodeficiencies to ground the reader in practical knowledge of the field and these complex conditions. Chapters cover B lymphocyte immunodeficiency, T cell immunodeficiency, immune dysregulation syndromes, and innate immune defects. They discuss a range of treatment options including gene therapy or bone marrow transplant. The book continues with a

discussion on secondary immunodeficiencies and their treatment. Each chapter was written by authors with expertise related to different immunodeficiency disorders and provide a succinct overview of pathomechanisms, diagnosis, and treatment of a specific condition. Primary and Secondary Immunodeficiency will be an excellent resource for practicing allergists, hematologists, clinical immunologists, fellows, residents, and other clinicians who work with

We anticipate the book to be a definitive text on the subject that explores all aspects of the study of adrenal cancer and the treatment of patients with the disease. Chapters will cover epidemiology, pathogenesis, genetics, cancer stem cells, historic

and emerging therapies, mouse models of adrenal cancer, new developments in tumor profiling, worldwide collaborative groups and tumor registries together with resources for the practitioner and community of adrenal cancer scientists. We do not wish this book to compete with the other larger books in the Endocrine and Endocrine Surgery literature. In addition, it is not expected to cover benign adrenal diseases that have been covered in

detail in other venues. We envision this book to be a very specialized and exhaustive text on basic, translational and clinical aspects of adrenal cancer. *Irwin & Rippe's Ultrasonography for Management of the Critically Ill* CRC Press Designed to accompany 'Robbins and Cotran Pathologic Basis of Disease, 7th Edition', this work includes many colour illustrations that depict almost all of the major conditions that are most commonly covered in pathology courses.

The Witch-cult in Western Europe Springer Nature From the internationally acclaimed scientist, explorer, and conservationist comes an awe-inspiring account of earth's evolution. Beginning at the moment of creation with the Big Bang, Here on Earth explores the evolution of Earth from a galactic cloud of dust and gas to a planet with a metallic core and early signs of life within a billion years of being created. In a compelling narrative, Flannery describes the

formation of the Earth's crust and atmosphere, as well as the transformation of the planet's oceans from toxic brews of metals (such as iron, copper, and lead) to life-sustaining bodies covering seventy percent of the planet's surface. Life, Flannery shows, first appeared in these oceans in the form of microscopic plants and bacteria, and these metals served as catalysts for the earliest biological processes known to exist. From this starting point, Flannery tells the fascinating story

of the evolution of our own species, exploring several early human species—from the diminutive creatures (the famed hobbits) who lived in Africa around two million years ago to *Homo erectus*—before turning his attention to *Homo sapiens*. Drawing on Charles Darwin's and Alfred Russell Wallace's theories of evolution and Lovelock's Gaia hypothesis, *Here on Earth* is a dazzling account of life on our planet. "You'll discover why Tim Flannery's books have

made him the rock star of modern science." —Jared Diamond, Pulitzer Prize-winning author of *Guns, Germs, and Steel* *Sutura Come Un Chirurgo: Una Guida Medica Ai Nodi Chirurgici E Alle Tecniche Di Sutura Utilizzate Nei Reparti Di Chirurgia, Pronto Soccorso, E Medicina Generale Oltre edizioni* Written by a multidisciplinary group of contributors, including radiologists, emergency physicians, critical care specialists, anesthesiologists, and

Provides a depth of understanding and interpretation from a multidisciplinary group of chapter authors, with step-by-step details on anatomy, equipment considerations, positioning, technique, normal and abnormal findings, and common pitfalls.
