Methodology is the ?eld which is indisputably complex. In the academic world, it is often said to be important, yet in everyday academic practice, it is not always treated accordingly. In teaching, methodology is often a mandatory course. Usually, it consists of learning how to adopt several common approaches when doing research, and how to conceive a research design (often leading to a survey). This usually leads to collecting data on a modest scale and - when the opportunity arises - analysing the data with the help of some statistics. Ask the students of their opinion at the end of such a course and they tend to heave a deep sigh of relief and say, "I have got through it. " Then their real courses start again, in which methodology often does not play a role at all. We are of the opinion that writing-off methodology in this way is a real pity. It ignores the valuable role

that methodology should play in academic teaching as a whole. Here, methodology is presented as a form of thinking and acting that, while obviously entailing research work, can also include the design and change of organisations. This broad approach has been purposefully chosen, as it is almost obvious from research and graduation projects that the students do not really have a clue what methodology involves and, therefore, wasting their time by producing work that has a little quality.

No topic is more central to innovation and current practice in testing and assessment today than computers and the Internet. This timely publication highlights four main themes that define current issues, technical advances and applications of computer-based testing: Advances in computer-based testing -- new test designs, item selection algorithms, exposure control issues and methods, and new tests that capitalize on the power of computer technology. Operational issues -- systems design, test security, and legal and ethical matters. New and improved uses -- for tests in employment and credentialing. The future of computer-based testing -- identifying potential issues, developments, major advances and problems to overcome. Written by internationally recognized contributors, each chapter focuses on issues of control, quality, security and technology. These issues provide the basic structure for the International Test Commission's new Guidelines on Computer-Based Testing and Testing on the Internet. The contributions to this book have played a key role in the development of these guidelines. Computer-Based Testing and the Internet is a comprehensive guide for all professionals, academics and practitioners working in the fields of education, credentialing, personnel testing and organizational assessment. It will also be of value to students developing expertise in these areas.

In his remarkable memoir, at once frank, audacious, canny, and revealing, Michael Korda, the author of *Charmed Lives* and *Queenie*, does for the world of books what Moss Hart did for the theater in *Act One*, and succeeds triumphantly in making publishing seem as exciting (and as full of great characters) as the stage. *Another Life* is not just an adventure--the engaging and often hilarious story of a young man making his career--but the insider's story of how a cottage industry metamorphosed into a big business, with sometimes alarming results for all concerned. Korda writes with grace, humor, and a shrewd eye, not only about himself and his rise from a lowly (but not humble) assistant editor reading the "slush pile" of manuscripts to a famous editor in chief of a major publishing house, but also about the celebrities and writers with whom he worked over four decades. Here are portraits--rare, intimate, always keenly observed--of such larger-than-life figures as Ronald Reagan, affable and good-natured but the most reluctant of authors, struggling with his "ghosted" presidential autobiography; Richard Nixon, seen here as a genial, if bizarrely detached, host; superagent Irving Lazar, pursuing his endless deals and dreams of "class"; retired Mafia boss Joseph Bonanno, the last of the old-time dons, laboring over his own version of his life in his desert retreat; Joan Crawford, giving Korda her rules for successful living; and countless other greats, near greats, and would-be greats. Here too are famous writers, sometimes eccentric, sometimes infuriating, sometimes lost souls, captured memorably by someone who was close to them for years: Graham Greene, in pursuit of his FBI file and a Nobel Prize; Tennessee Williams, wrestling unsuccessfully with his demons; Jacqueline Susann, facing and conquering the dreaded "second-novel syndrome" after the stunning success of *Valley of the Dolls*; Harold Robbins (who had to be guarded under lock and key and made to finish his novels), struggling to keep the IRS at bay from the deck of his yacht; Carlos Castaneda, at his most sorcerously charming, described--at last--in detail, as he really was, by one of the few people who knew him well; not to mention Richard Adams, Will and Ariel Durant, Susan Howatch, S. J. Perelman, Fannie Hurst, Larry McMurtry, and many, many more. Parts of this book that have appeared in *The New Yorker* over the years have brought Korda great acclaim--the chapter about Jacqueline Susann has been made into a major motion picture. Here at last, entertaining and provocative and always hugely readable, is the

whole story--a book as engaging and full of life as Korda's highly acclaimed memoir of his family, *Charmed Lives*, about which Irwin Shaw wrote: "I don't know when I have enjoyed a book more." **A Concise Guide for Master and PhD Students in Management Science** John Wiley & Sons

SASB's Technical Bulletin on Climate Risk is designed to help investors better understand, measure and manage their exposure to climate-related risk. The research finds that climate change affects 72 out of 79 industries (93 percent of the capital markets, or \$27.5 trillion) but manifests differently from one industry to the next. Due to the ubiquity of climate risk, investors can't simply diversify away from it; instead they must focus on managing it-and on encouraging portfolio companies to manage it-in all its forms. The foreword to the guide, authored by former Secretaries of the Treasury Robert Rubin and Hank Paulson, emphasizes the need for better disclosure. "If investors are to effectively evaluate climate risk, they need a far better understanding of granular, industry-specific climate impacts, with industry-specific standards by which to evaluate corporate performance on these issues. By adopting a set of industry-based market standards for disclosure, especially in SEC filings, investors will be able to accurately compare and contrast companies," they write. "This latest SASB bulletin is a good next step toward this goal, and offers for the first time a comprehensive guide to understand and measure the unique climate impacts across all industries of the economy."
