Modeling, simulation, and analysis (MS&A) is a crucial tool for military affairs. MS&A is one of the announced pillars of a

strategy for transforming the U.S. military. Yet changes in the enterprise of MS&A have not kept pace with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the technology available to meet those demands. To help address those concerns, DOD asked the NRC to identify shortcomings in current practice of MS&A and suggest where and how they should be resolved. This report provides an assessment of the changing mission of DOD and environment in which it must operate, an identification of high-level opportunities for MS&A research to address the expanded mission, approaches for improving the interface between MS&A practitioners and decision makers, a discussion of training and continuing education of MS&A practitioners, and an examination of the need for coordinated military science research to support MS&A.

The legendary H-4 Hercules was designed and built by the Hughes Aircraft Company. Intended to defeat the German U-boat threat, the plane was intended to be a super transport that could ferry 750 troops from the USA to Europe, and serve as an aerial ambulance on the return flight. Owing to wartime restrictions on the use of aluminum, the prototype Hercules was built using laminated birch wood. Although company CEO Howard Hughes hated it, the name "Spruce Goose" was coined for the plane and it stuck. The Hercules would be the largest flying boat ever built, and one of history's largest and most expensive planes. Many questioned the practicality of the aircraft, and after the war ended and the project was roundly criticized as a boondoggle. To silence the critics, Howard Hughes decided to prove the plane could fly. On November 2, 1947 he and a crew of 21 conducted a series of taxi tests with the plane. On the last test, the plane became airborne for a brief time and flew just under two miles at an altitude of roughly 70 feet. It would never fly again, but Hughes had silenced his critics. This Hughes Flying Boat Manual was originally prepared for the U.S. Government's War Department, and made available through the Freedom of Information Act. It provides an overview of this massive plane's design and operation for the pilot and flight crew, and puts you right in the cockpit of one of history's great planes. Please note, because this document originated from an archival copy, legibility can vary.

The extensive scope of this collection means that this documentary record of the reception of German literature in England is a valuable scholarly resource. One of the most important features of British literary and intellectual history over the past 250 years is the influence of German literature. From the second half of the 18th Century, through the first decades of the 19th, German books and ideas attracted, then gained the attention of a nation. Despite the acknowledged importance of the influence on writers such as Coleridge and Carlyle the subject, though often alluded to, was rarely studied. This collection provides a guidebook through the masses of periodical and allows the English side of the Anglo-German literary relationship to be explored in detail. In order to make the collection useful to scholars with a wide range of interest, it has been divided into three parts: Part 1 is a chronological presentation of commentary on German literature in general. It also contains collective reviews of multiple German authors, notices of important anthologies and reactions to influential works about Germany and its culture. Part 2 collects reviews of 18th Century individual German authors and Part 3 is devoted to the English reception of Goethe and Schiller. Parts 2 & 3 contain cross-references to the collective reviews of Part 1. Containing over 200 British serials and articles and reviews from all the major English literary periodicals, the collection also includes a broad sampling of opinion from the more general magazines, including some popular religious publications.
