Bringing Domestic Institutions Back In SAGE

Climate Change and the Course of Global History presents the first global study by a historian to fully integrate the earth-system approach of the new climate science with the material history of humanity. Part I argues that geological, environmental, and climatic history explain the pattern and pace of biological and human evolution. Part II explores the environmental circumstances of the rise of agriculture and the state in the Early and Mid-Holocene, and presents an analysis of human health from the Paleolithic through the rise of the state, including the Neolithic Demographic Transition. Part III introduces the problem of economic growth and examines the human condition in the Late Holocene from the Bronze Age through the Black Death, assessing the relationships among human technologies, climatic change, and epidemic disease. Part IV explores the move to modernity, stressing the emerging role of human economic and energy systems as earth-system agents in the Anthropocene. Supported by climatic, demographic, and economic data with forty-nine figures and tables custom-made for this book, A Rough Journey provides a pathbreaking model for historians of the environment, the world, and science, among many others.

How Local Politics Threaten the Global Economy Springer Nature

The 'long nineteenth century' (1776-1914) was a period of political, economic, military and cultural revolutions that re-forged both domestic and international societies. Neither existing international histories nor international relations texts sufficiently register the scale and impact of this 'global transformation', yet it is the consequences of these multiple revolutions that provide the material and ideational foundations of modern international relations. Global modernity reconstituted the mode of power that underpinned international order and opened a power gap between those who harnessed the revolutions of modernity and those who were denied access to them. This gap dominated international relations for two centuries and is only now being closed. By taking the global transformation as the starting point for international relations, this book repositions the roots of the discipline and establishes a new way of both understanding and teaching the relationship between world history and international relations.

Debunking the Myths Routledge

The unprecedented Covid-19 crisis revealed the scale and scope of a new type of economy taking shape in front of our very eyes: the digital economy. This book presents a concise theoretical and conceptual framework for a more nuanced analysis of the economic and sociological impacts of the technological disruption that is taking place in the markets of goods and services, labour markets, and the global economy more generally. This interdisciplinary work is a must for researchers and students from economics, business, and other social science majors who seek an overview of the

main digital economy concepts and research. Its down-to-earth approach and communicative style will also speak to businesses practitioners who want to understand the ongoing digital disruption of the market rules and emergence of the new digital business models. The book refers to academic insights from economics and sociology while giving numerous empirical examples drawn from basic and applied research and business. It addresses several burning issues: how are digital processes transforming traditional business models? Does intelligent automation threaten our jobs? Are we reaching the end of globalisation as we know it? How can we best prepare ourselves and our children for the digitally transformed world? The book will help the reader gain a better understanding of the mechanisms behind the digital transformation, something that is essential in order to not only reap the plentiful opportunities being created by the digital economy but also to avoid its many pitfalls.

The world is changing dramatically and a vigorous public debate is under way about the nature and historical significance of these changes. At the centre of this debate lie conflicting claims about the extent, form and consequences of contemporary globalization. On the one hand there are the globalists, who argue that the world is being fundamentally and irreversibly transformed by globalization. On the other hand there are the sceptics, who believe that the globalists' claims are exaggerated and poorly substantiated. The sceptics contest the very idea of globalization, arguing that the power of national governments, nationalism and geopolitics remain the determining features of our age. This completely revised and fully updated edition of *The Global Transformations Reader* brings together the most original contributions from both sides of the argument and from a range of disciplines. Many new chapters have been added, which incorporate the most recent developments in the debate and set these in the context of a global order that is in a constant state of flux. Organized as an accessible and comprehensive teaching text, the Reader is divided into six sections covering all the key issues in the debate: controversy over the meaning, causes and historical significance of 'globalization' the transformation of state power and civil society; changing patterns of national culture; the power of global markets; global inequality and its consequences; and the nature of the global order and normative aspirations for its future. The volume includes an extensive introduction by the editors, reviewing, analysing and assessing the globalization debate. Short but highly informative introductions to each section situate and contextualize the individual readings. This Reader will be of immense value to all those interested in one of the most important debates of our time. It will appeal to students of politics, international relations, economics, sociology, geography, business studies and cultural studies. The *Global Transformations Reader* is part of the internationally acclaimed series on globalization, which also includes *Global Transformations: Politics, Economics and Culture* and *Governing Globalization: Power, Authority and Global Governance*.

This book examines the political, economic and social transformation of the six member-states of the Gulf Cooperation Council (GCC) and the ways in which these states are both shaping, and being reshaped by, the processes of globalisation. Adopting a multidisciplinary approach, the volume combines thematic chapters focusing on issues such as globalisation, nationalism and identity, political thinking, and economic diversification and redistributive policymaking with empirical chapters studying specific aspects of reform and change: the emergence of governing markets the rise of Sovereign Wealth Funds Islamic Finance the relationship between energy and sustainability trends in foreign aid donorship, strategic and foreign policy formulation. Contributions from experts in the field provide cutting-edge snapshots of a region in flux and collectively offer a roadmap of its repositioning in the global order, examining the interaction between global processes and internal dynamics of change and resistance that inject new dimensions into debates over the loci of local and global transformations and the manner in which each plays off the other. Situating the Gulf States firmly within their global twenty-first century context, this book will hold particular appeal to theorists of globalisation as well as to scholars of comparative politics, international political economy and area studies.

Consumerism in World History Psychology Press

Globalization Hype Has Obscured a Few Basic Truths—that political stability and economic growth are usually determined on the local level, and that they're most affected by local institutions, local leadership, and other such factors. *Risk Rules* shows that globalization (and events like the recent overthrow of long-time leaders in Egypt and Tunis; the global recession triggered by the U.S. credit crisis in 2008; and the wars in Iraq and Afghanistan) makes understanding the political economies of different countries more important than ever. This book analyzes the fifteen main principles of how countries work, providing a powerful, intuitive framework for understanding international developments. Doing globalization right means understanding local economic, cultural, and political realities. This truth holds for companies, policymakers, small investors, voters, and everyone whose lives and finances are affected by distant world events. Book jacket.

The book focuses on the changes that the media system in Turkey went through since early 2000s. Its perspective considers sociology of citizenship and focuses on processes such as Europeanization, de-Europeanization, authoritarianism on the one hand and implications of digitalization and convergence on the other. It tracks the transformation of the media system through the trajectories of normative, participative, and entrepreneurial citizenship practices. The final sections focus on aspects of convergence evidenced in bottom-up and participatory forms of digital media such as the birth of citizen journalism and fact-checkers after the demise of conventional mainstream media in recent years.

contribution." Miguel Angel Centeno, Princeton University "Exceptionally diverse and comprehensive... [this] is certain to become an essential reference work on the economic, moral, human rights and civilizational aspects of globalization." Daniel Chirot, University of Washington "...a much-needed comprehensive, updated, and non-Western-centric introduction to the origins, dynamics, and latest trends of globalization as seen from the perspectives of Global North and South." Ho-fung Hung, Johns Hopkins University "...a timely and solid overview of the key theoretical and methodological challenges faced across the social sciences as we seek to understand the possible futures of globalization." Roberto Patricio Korzeniewicz, University of Maryland "Ino Rossi has brought together a range of authors covering multiple aspects of our current condition. This diversity of engagements is what we need to sort out our major challenges." Saskia Sassen, Columbia University "It is the best collection of studies on ecological globalization, latest impact on the Global South, millennia ascent of individual rights, and alternative designs of the future world order." Alvin Y. So, Hong Kong University of Science and Technology This is a must-read volume on globalization in which some of the foremost scholars in the field discuss the latest issues. Truly providing a global perspective, it includes authorship and discussions from the Global North and South, and covers the major facets of globalization: cultural, economic, ecological and political. It discusses the historical developments in governance preceding globalization, the diverse theoretical and methodological approaches to globalization, and analyzes underdevelopment, anti-globalization movements, global poverty, global inequality, and the debates on international trade versus protectionism. Finally, the volume looks to the future and provides prospects for inter-civilizational understanding, rapprochement, and global cooperation. This will be of great interest to academics and students of sociology, social anthropology, political science and international relations, economics, social policy, social history, as well as to policy makers.

For some, recycling is a big business; for others a moralised way of engaging with the world. But, for many, this is a dangerous way of earning a living. With scrap now being the largest export category from the US to China, the sheer scale of this global trade has not yet been clearly identified or analysed. Combining fine-grained ethnographic analysis with overviews of international material flows, *Economies of Recycling* radically changes the way we understand global and local economies as well as the new social relations and identities created by recycling processes. Following global material chains, this groundbreaking book reveals astonishing connections between persons, households, cities and global regions as objects are reworked, taken to pieces and traded. With case studies from Africa, Latin America, South Asia, China, the former Soviet Union, North America and Europe, this timely collection debunks common linear understandings of production, exchange and consumption and argues for a complete re-evaluation of North-South economic relationships.

Now in a fully revised and updated edition, this balanced and clearly written text explores globalization and its impact from economic, political, social, environmental, and cultural perspectives. Providing a framework and platform for student learning, the book gives readers the tools to unravel the complexities of globalization in all its facets. Lui Hebron and John Stack note that as a hot-button term, globalization is used to describe any number of changes within, among, and between societies and states. Their goal is to reduce the noise engulfing debates and interpretations of one of the most dynamic, contested, applauded, and disparaged phenomena of the twenty-first century. Arguing that current assessments—both positive and

negative—of globalization are overblown, the authors treat the dramatically changing landscapes of world politics as less a revolution than an evolution of already established structures and patterns of transnational relations. They trace how globalization has affected individuals, societies, states, and intergovernmental and supranational organizations. Making sense of a world seemingly smaller and incomprehensibly larger, simultaneously centralizing and fragmenting, *Globalization: Debunking the Myths* offers both an indispensable introduction for undergraduates and a concise review for more advanced students.

Through an examination of such disciplinary keywords, and their silences, as the West, modernity, globalization, the state, culture, and the field, this book aims to explore the future of anthropology in the Twenty-first-century, by examining its past, its origins, and its conditions of possibility alongside the history of the North Atlantic world and the production of the West. In this significant book, Trouillot challenges contemporary anthropologists to question dominant narratives of globalization and to radically rethink the utility of the concept of culture, the emphasis upon fieldwork as the central methodology of the discipline, and the relationship between anthropologists and the people whom they study.

This book examines just what the European Union is, in the context of the ongoing structural transformation of the global system. The author develops an integrated approach to global transformations, drawing on geopolitics, political geography, international relations, economics, economic and political history, political economy and macro-sociology to discuss how this supra-state organisation, that shares and pools the sovereignty of some of the wealthiest states of the modern world, makes sense. The book: Interprets the ongoing transformation of west European public authority in the context of the global geopolitical economy of competition, cooperation and conflict Examines the consequences of west European integration for the global system in a *longue-durée* perspective, developing a new, geopolitical dialect within world-systems analysis, sharpening some of the conceptual tools developed by its paradigm-setters. Develops a new conceptualization for the EU's global geopolitical strategy, which the author describes this strategy as the elasticity of size Developing a deeper understanding of global social change and west European strategies of global advantage-maintenance and power-management, this book will be of interest to students and scholars of European Politics, International Politics, International Relations Theory and Globalization Studies.

The world appears to be changing dramatically and a very public debate is taking place about the form, extent and significance of these changes. At the centre of this debate lie conflicting claims about the forces and processes of contemporary globalization. On the one hand, there are the 'globalists', who argue that the world is being fundamentally and irreversibly transformed by globalization. The fate of national communities is, they hold, increasingly shaped by regional and global forces. On the other hand, there are the 'sceptics', who think that the globalists' claims are exaggerated and poorly substantiated. The sceptics contend that the world has not been irreversibly altered by globalization, and that the power of national governments, nationalism and geo-politics remain the determining features of our age. The *Global Transformations Reader* brings together the most original contributions from both sides of the argument and from a range of disciplines. Organized as an accessible and comprehensive teaching text, the Reader is divided into sections which cover all the key issues: The conceptual problems involved in the attempt to characterize globalization. The transformation of state power. Changing patterns of national culture. The development of the world economy. Global inequality and environmental challenges. The normative debate about the nature and desirable future of the global order. The whole volume is prefaced by a major new statement by the editors summarizing and analysing the globalization debate. Short part introductions also help situate and contextualize the articles. This volume will be of immense value to all those interested in one of the great debates of our time. Global Flows Global Transformations John Wiley & Sons

In this book, the authors set forth a new model of globalization that lays claims to supersede existing models, and then use this model to assess the way the processes of globalization have operated in different historic periods in respect to political organization, military globalization, trade, finance, corporate productivity, migration, culture, and the environment. Each of these topics is covered in a chapter which contrasts the contemporary nature of globalization with that of earlier epochs. In mapping the shape and political consequences of globalization, the authors concentrate on six states in advanced capitalist societies (SIACS): the United States, the United Kingdom, Sweden, France, Germany, and Japan. For comparative purposes, other states—particularly those with developing economies—are referred to and discussed where relevant. The book concludes by systematically describing and assessing contemporary globalization, and appraising the implications of globalization for the sovereignty and autonomy of SIACS. It also confronts directly the political fatalism that surrounds much discussion of globalization with a normative agenda that elaborates the possibilities for democratizing and civilizing the unfolding global transformation.
