RadarLIDAR is also  
known as Light  
Imaging Detection and  
Ranging. It is a  
technology that  
detects objects on the  
surface, as well as their  
size and exact  
disposition. LIDAR  
appeared on the  
market after RADAR  
and SONAR, and it uses  
laser light pulses to

scan the environment, as opposed to radio or sound waves. Lidar vs Radar: pros and cons for autonomous driving ...The goal is to develop techniques for autonomous navigation for ships with focus on safety, using a combination of different sensors, machine learning and artificial intelligence. The technology will combine data from visual images, environmental sound recordings, RADAR and LiDAR ranging, satellite navigation, and vessel transponders. Maritime AI-NAV - AI, Autonomous ships, Machine learning ...Because of this capability, LiDAR has been the darling of autonomous driving since the 2007 DARPA Autonomous Driving Challenge. Since then,

LiDAR sensors have had great size and cost reductions, but some of the more widely used and recognized models still cost a lot more than radar or camera sensors, and some even cost more than the vehicle they are mounted on. RADAR, Camera, LiDAR and V2X for Autonomous Cars | NXP Radar. Radars are already established in the automotive industry, they have been employed in series cars since many years to enable ADAS features such as Adaptive Cruise Control (ACC) and Autonomous Emergency Braking (AEB). Radars accurately measure distance and radial velocity. They are particularly good at detecting metallic objects but are also

able to detect non-metallic objects such as pedestrians with reduced range.
