Neonatal Clinical Pharmacology and Therapeutics covers the significant advances in clinical pharmacology and the principles of neonatal therapeutics. This book is composed of 20 chapters that tackle various neonatal diseases and their corresponding therapeutic options. The opening chapters review the pharmacological principles and kinetics,

placental drug transfer, and drug therapy in pregnancy. The next chapters consider the other aspects of clinical pharmacology, including tocolytics, oxytocin, maternal drug use, neonatal withdrawal, prophylaxis, and the effect of maternal analgesia and anesthetics on newborn. Considerable chapters are devoted to the treatment options of neonatal diseases, including apnea, pulmonary and systemic disorders, cardiac diseases, jaundice, hypoglycemia, and nutrient deficiencies. The remaining chapters discuss other therapeutic options, such as blood cell component therapy, the use of analgesia and muscle relaxants, and parenteral nutrition. This book is intended primarily for all doctors who care for newborn babies and clinical pharmacologists.

100 Cases in Clinical Pharmacology, Therapeutics and Prescribing explores scenarios commonly seen by medical students and junior doctors in the ward, emergency department, outpatient clinic or in general practice in which an understanding of pharmacology and sound prescribing practice is central to successful clinical management and safe patient care. A succinct summary of the patient's history, examination and any initial investigations is followed by questions on the diagnosis and management of the case. The answer includes a detailed discussion on each topic, providing practical advice on how to deal with the challenges that occur when prescribing, including planning, drug

calculations, prescription review and adverse drug reactions. The book will be invaluable during clinical placements and is an ideal companion during preparation for the Prescribing Safety Assessment examination. Making speedy and appropriate clinical decisions, and choosing the best course of action to take as a result, is one of the most important and challenging parts of training to become a doctor. These true-to-life cases will teach students and junior doctors to prescribe appropriately, and to hone their diagnostic and management skills.

Today we witness an eventful time in which the powerful new forces of genomics, information technology and economics are rapidly changing the science and art of medicine. This will require more specialization than ever before. However, there is also an increasing demand for an integrated approach, which is provided by the discipline of Clinical Pharmacology (CP). CP pursues a scientific goal by studying drug action in patients and volunteers, a clinical goal by administering appropriate drug therapy and a regulatory goal by

assessing the risk/benefit ratio of drug candidates in drug development and reimbursement. This introduction to current topics of CP covers traditional topics of clinical drug research and trial methodology but also provides insight in current topics like genomics, imaging technology and issues in drug reimbursement. A number of concrete case studies in clinical drug research and development help to give a better understanding of the general principles of CP.
