In iOS and macOS(TM) Performance Tuning, Marcel Weiher drills

down to the code level to help you systematically optimize CPU, memory, I/O, graphics, and program responsiveness in any Objective-C, Cocoa, or CocoaTouch program. This up-to-date guide focuses entirely on performance optimization for macOS and iOS. Drawing on more than 25 years of experience optimizing Apple device software, Weiher identifies concrete performance problems that can be discovered empirically via measurement. Then, based on a deep understanding of fundamental principles, he presents specific techniques for solving them. Weiher presents insights you won't find anywhere else, most of them applying to both macOS and iOS development. Throughout, he reveals common pitfalls and misconceptions about Apple device performance, explains the realities, and helps you reflect those realities in code that performs beautifully. Understand optimization principles, measurement, tools, pitfalls, and techniques Recognize when to carefully optimize, and when it isn't worth your time Balance performance and encapsulation to create efficient object representations, communication, data access, and computation Avoid mistakes that slow down Objective-C programs and hinder later optimization Fix leaks and other problems with memory and resource management Address I/O issues associated with drives, networking, serialization, and SQLite Code graphics and UIs that don't overwhelm limited iOS device resources Learn what all developers need to know about Swift performance This book's source code can be downloaded at github.com/mpw/iOS-macOS-performance. Coming to grips with C++11 and C++14 is more than a matter of familiarizing yourself with the features they introduce (e.g., auto type declarations, move semantics, lambda expressions, and concurrency support). The challenge is learning to use those features effectively—so that your software is correct, efficient, maintainable, and portable. That's where this practical book comes in. It describes how to write truly great software using C++11 and C++14—i.e. using modern C++. Topics include: The pros and cons of braced initialization, noexcept specifications, perfect forwarding, and smart pointer make functions The relationships among `std::move`, `std::forward`, rvalue references, and universal references Techniques for writing clear, correct, effective lambda expressions How `std::atomic` differs from volatile, how each should be used, and how they relate to C++'s concurrency API How best practices in "old" C++ programming (i.e., C++98) require revision for software development in modern C++ Effective Modern C++ follows the proven guideline-based, example-driven format of Scott Meyers' earlier books, but covers entirely new material. "After I learned the C++ basics, I then learned how to use C++ in production code from Meyer's series of Effective C++ books. Effective Modern C++ is the most important how-to book for advice on key guidelines, styles, and idioms to use modern C++ effectively and well. Don't own it yet? Buy this one. Now". -- Herb Sutter, Chair of ISO C++ Standards Committee and C++ Software Architect at Microsoft Objective Food Science & Technology, 2Nd Ed. Pearson Education Developed from celebrated Harvard statistics lectures, Introduction to Probability provides essential language and tools

for understanding statistics, randomness, and uncertainty. The book explores a wide variety of applications and examples, ranging from coincidences and paradoxes to Google PageRank and Markov chain Monte Carlo (MCMC). Additional

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes

(DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.

PRAISE FOR THE BOOK "...essential reading for anyone interested in the existence and exercise of EU powers in the field of criminal law. Öberg's critical examination of the constitutional constraints to EU action also raises many questions that are of great interest in other areas of EU competence. The book deserves a wide readership among scholars interested in the constitutional workings of the European Union." Samuli Miettinen, University of Helsinki & Tallinn University "The main strength of this book lies in its comprehensiveness of dealing with the topical issue of EU regulatory criminal law from the fascinating perspective of limits to EU powers. Its particular contribution to existing scholarship in the field of EU criminal law concerns its focus on judicial checks on the exercise of competences as to which the book offers a convincing proposal for a stricter standard for judicial review in matters of regulatory criminal law and beyond." Professor

Jannemieke Ouwerkerk, Leiden Law School "An excellent read on competence allocation in EU law and what it means in criminal law context. This book guides the reader through very complex questions of the contours of subsidiarity, national competences and the exact limits of EU powers. It also supplies up to date case studies of financial crimes and the need for the EU to act effectively and thereby increase confidence in the market and the challenges it may cause for national systems. A very timely contribution." Ester Herlin Karnell, VU University Amsterdam Pursuant to the precepts of EU law, EU policy-makers are bound to ensure that any EU legislation must fall within the remit of the EU's competences. This monograph looks at this highly contested issue, with particular reference to European Union criminal law. It looks at the powers enjoyed by the EU to impose criminal sanctions to suggest mechanisms by which legislative powers could be kept in check. The book argues that the main responsibility for providing checks against the exercise of EU power lies with the EU judiciary. It argues that the most effective form of review is procedural and through the case study of sanctions, provides the basis for such a review. Innovative, engaging and rigorous, this is an important publication both in the field of European criminal and constitutional law.
