Developing the text, art, media, homework, and ancillaries simultaneously, Chiang translates those experiences into a cohesive approach that embodies the book's founding principles: To use technology as a tool for learning—before lectures, during class, when doing homework, and at exam time To help students harness the data literacy they'll need as consumers of economic information To provide a truly global perspective, showing the different ways people around the world confront economic problems

'Natural Resources: Neither Course nor Destiny' brings together a variety of analytical perspectives, ranging from econometric analyses of economic growth to historical studies of successful development experiences in countries with abundant natural resources. The evidence suggests that natural resources are neither a curse nor destiny. Natural resources can actually spur economic development when combined with the accumulation of knowledge for economic innovation. Furthermore, natural resource abundance need not be the only determinant of the structure of trade in developing countries. In fact, the accumulation of knowledge, infrastructure, and the quality of governance all seem to determine not only what countries produce and export, but also how firms and workers produce any good.

Are your students bored in class? According to research, a majority of American high school students report being bored in class and fewer than 5% claimed that they were rarely bored during a typical day in school. Former journalist and veteran teacher Martha Rush decided this would not do for her Minnesota students. Moving beyond asking open-ended questions and making connections to their own lives, Martha began to engage her government, journalism, and economics classes in meaty discussions, competitions, simulations, and authentic work, like running a newspaper or starting a business. Building on her more than 800 interviews with high school graduates, she offers up

strategies in all subject areas for active engagement, moving way beyond traditional passive memorization of information. She describes how to create innovative experiences in your classroom, and shares her own lessons and her students' work. Beat Boredom will help you join the ranks of teachers who have challenged the status quo and found ways to motivate even the most reluctant learners.
