Offers a comprehensive review of cardiovascular medicine, from basic to advanced.

CURRENT Geriatric Diagnosis and Treatment John Wiley & Sons

For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has

been considered a difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

Accounting for more than 40% of all heart failure problems, diastolic heart failure is a complex and often difficult diagnosis with rapidly evolving diagnostic management protocols.

Diastology: Clinical Approach to Heart Failure with Preserved Ejection Fraction, 2nd Edition, brings you up to date and equips you to successfully diagnose and manage even the most challenging incidences of diastolic heart failure and their comorbidities. It incorporates the latest guidelines for the diagnostic evaluation of the patient with suspected or known diastolic dysfunction, provides a comprehensive review of clinical conditions associated with heart failure with preserved ejection fraction, and describes the complementary role of imaging modalities and novel therapeutic approaches. - Keeps you current with recent extensive changes in the understanding of the mechanisms of diastolic heart failure with preserved ejection fraction (HFpEF) that have resulted in dramatic changes in treatment guidelines. - Covers the latest molecular, genetic, and cellular mechanisms behind diastolic heart failure as a basis for the latest clinical approaches, diagnosis, and treatment of common and uncommon pathological conditions such as hypertensive heart disease, cardiomyopathies, arterial and valvular diseases, pericardial diseases, congenital heart disease, diabetes mellitus, and metabolic syndrome. - Features 50 video cases, new key summary points, new multiple-choice review questions, and six new chapters: Evaluation of Diastolic Function by Radionuclide Techniques; Diastology Stress Test; ASE/EACVI Diastolic Guidelines; Valve Disease; Perioperative Assessment of Diastolic Dysfunction; and Pulmonary Hypertension. - Reviews new techniques and indices for assessing diastolic function, such as 3D echo, strain rate imaging, late gadolinium enhancement and T1-mapping by CMR, and novel nuclear scintigraphic methods - as well as the traditional indices of LV filling, LA

function, and tissue Doppler indices. - Covers emerging topics such as the role of neurohormones, global and regional systolic function of the left ventricle, chronotropic incompetence and pacing, aging, perioperative assessment, and more. - Presents information in a quick-retrieval format, covering Epidemiology, Pathophysiology, Diagnostic Evaluation, Differential Diagnosis, Treatment, and Future Directions. - Helps you learn efficiently and prepare for self-assessment with key summaries and multiple-choice questions and answers for each chapter.

Diagnosis and Management of Hypertrophic Cardiomyopathy is a unique, multi-authored compendium of information regarding the complexities of clinical and genetic diagnosis, natural history, and management of hypertrophic cardiomyopathy (HCM)—the most common and important of the genetic cardiovascular diseases—as well as related issues impacting the health of trained athletes. Edited by Dr. Barry J. Maron, a world authority on HCM, and with major contributions from all of the international experts in this field, this book provides a single comprehensive source of information concerning HCM. Recent advances in the field are discussed, including the importance of left ventricular outflow tract obstruction, the use of implantable defibrillators for the prevention of sudden death in young people, definition of the genetic basis for HCM and its role in clinical

diagnosis and risk stratification, the development of more precise strategies for assessing the level of risk for sudden death among all patients with HCM, and the evolution of invasive interventions for heart failure symptoms, such as surgical management and its alternatives (alcohol septal ablation and dual-chamber pacing).

Key Features: Contributions from all experts in the field, representing diverse viewpoints regarding this heterogeneous disease and related issues in athletes. Information to dispel misunderstandings regarding issues associated with HCM and cardiovascular disease in athletes. The only comprehensive source of information available on the topic.
