What is intellectual property? Should copyright laws be modified to accommodate new ways of transmitting information? The debate over such questions has reemerged with the growth of the

Internet and other means of electronically storing information. Over 600 articles written from 1900 through 1995 are fully annotated in this bibliography. The citations cover a wide range of material, from humorous anecdotes in popular magazines to scholarly discussions in academic journals. The entries are divided into three parts: the money trail; the detection and proof of violations and the punishment of offenders; and defending one's property. A lengthy introduction first details how the concept of intellectual property came into being and then focuses on how governments and other entities deal with the issue.

Since Galileo corresponded with Kepler, the community of scientists has become increasingly international. A DNA sequence is as significant to a researcher in Novosibirsk as it is to one in Pasadena. And with the advent of electronic communications technology, these experts can share information within minutes. What are the consequences when more bits of scientific data cross more national borders and do it more swiftly than ever before? Bits of Power assesses the state of international exchange of data in the natural sciences, identifying strengths, weaknesses, and challenges. The committee makes recommendations about access to scientific data derived from public funding. The volume examines: Trends in the electronic transfer and management of scientific data. Pressure toward commercialization of scientific data, including the economic aspects of government dissemination of the data. The implications of proposed changes to intellectual property laws and the role of scientists in shaping legislative and legal solutions. Improving access to scientific data by and from the developing world. Bits of Power explores how these issues have been addressed in the European Community and includes examples of successful data transfer activities in the natural sciences. The book will be of interest to scientists

and scientific data managers, as well as intellectual property rights attorneys, legislators, government agencies, and international organizations concerned about the electronic flow of scientific data.

These collected chapters and interviews explore the current issues and debates about how copyright will or should adapt to meet the practices of 21st-century creators and internet users. The book begins with an overview of copyright law basics. It is organized by parts that correspond to creative genres: Literary Works, Visual Arts, Fine Art, Music, Video Games and Virtual Worlds, Fashion, and Technology. The chapters and interviews address issues such as copyright ownership in work created by Artificial Intelligence (AI), the musical remix market, whether appropriation is ever a fair use of a copyrighted work or if it is always theft, and whether internet- based platforms should do more to deter piracy of creators' works. Each part ends with an essay explaining the significance of one or two landmark or trendsetting cases to help the reader understand the practical implications of the law. Written to be accessible to both lay and legal audiences, this unique collection addresses contemporary legal issues that all creators need to understand and will be essential reading for artists, designers, and musicians as well as the lawyers who represent them.

Make better decisions! Michael A. Roberto will help you achieve deeper consensus, get past groupthink and "yes men," and achieve superior results in every decision you make -- especially your most complex and highest-stakes decisions! Roberto's Why Great Leaders Don't Take Yes for an Answer, Second Edition gives you a powerful framework for promoting honest, constructive dissent and skepticism; test your assumptions; more thoroughly and fairly considering "best alternatives"; crisply coming to closure; and aligning your entire organization behind the decision you make. In this new edition, Roberto presents new cases from Google, Ford, and Intuit, and expands coverage to more deeply illuminate his decision-making approach. Offering both positive and negative examples, he presents a well rounded view of how to determine when 'yes' means 'yes', when it doesn't, and what to do when it doesn't. Throughout, Roberto demonstrates why "good process entails the astute management of the social, political and emotional aspects of decision making" -- in other words, why effective leaders are well served by carefully "deciding how to decide." You'll learn how to: Test and probe what your team really believes, and get the truth and candor you really need Encourage constructive objections -- and keep them constructive Improve team management, mitigate risk, identify opportunities, and promote integrity Build stronger commitment amongst the people who'll implement your decisions
