ABOUT FINANCIAL ACCOUNTING VOLUME 2 (8TH EDITION) John Wiley & Sons

Sea-Jin Chang argues that the Korean financial crisis of 1997 was due to the inertia of both the business groups known as chaebols and the Korean government which prevented adaptation to changing external environments. Once the Korean government stopped central economic planning and pursued economic

liberalization in the 1980s, the transition created a void under which neither the government nor markets could monitor chaebols' investment activities. The intricate web of cross-shareholding, debt guarantees, and vertical integration resulted in extensive cross-subsidization and kept chaebols from shedding unprofitable businesses. The government's continued interventions in banks' lending practices created 'moral hazards' for both chaebols and banks. This treatment demonstrates how the structure of chaebols later inhibited other adaptations and for all practical purposes became nearly dysfunctional. The book argues that restructuring of chaebols should focus on improving corporate governance systems. After such restructuring, the author predicts, chaebols will re-emerge as stronger, more focused global players.

Corporate and Trust Structures: Legal and Illegal Dimensions is a collection of essays by experts in company law, trusts and financial crime. It explores the nature of companies and trusts, how they have been utilised for legitimate business purposes,

and how they can be exploited by criminals for illegal purposes. Basic concepts relating to trusts and companies are considered, together with recent developments in corporate liability, including when liability may be attributed to companies and when the veil of limited liability may be lifted. Complex corporate structures, including the ownership structure of the Alibaba Group, are examined. The Panama Papers' revelations are also discussed together with the mechanisms within trusts and company structures that make them vulnerable and attractive for criminal abuse. The essayists address critical issues in the domestic and international contexts, including the requirements of the international standards against money laundering relevant to trusts and companies. Academics, lawyers, business people and policy-makers will find the essays topical and relevant.

This book approaches the question of the relation between financial crises and earnings management from two philosophical perspectives: positivism and critical realism. The results obtained using the positivist approach indicate that financial crises tend to have no consistent effect on earnings quality since managers' earnings behavior does not differ from the pre-crisis to the crisis period. The author accordingly argues against the existence of a causal law based on a constant conjunction model (i.e., whenever a financial crisis happens, earnings management occurs) and concludes that financial crises cannot be seen as the cause of earnings management. The critical realism perspective, on the other hand, casts light on managers' reasons for

acting like an earnings manager; in conjunction with the more traditional positivist approach, it assists in refuting the idea of financial crises as a generative mechanism for earnings management. The author concludes by exploring other structures at work that might be responsible for earnings management. This book will be of interest to both academics and a wide range of professionals.

A large part of academic literature, business literature as well as practices in real life are resting on the assumption that uncertainty and risk does not exist. We all know that this is not true, yet, a whole variety of methods, tools and practices are not attuned to the fact that the future is uncertain and that risks are all around us. However, despite risk management entering the agenda some decades ago, it has introduced risks on its own as illustrated by the financial crisis. Here is a book that goes beyond risk management as it is today and tries to discuss what needs to be improved further. The book also offers some cases.
